CHAPTER 2
BASIN SETTING

2.1 INTRODUCTION TO BASIN SETTING

Physical Setting and Characteristics

The Oxnard Subbasin (Subbasin) of the Santa Clara River Valley Groundwater Basin is located near the western edge of the Transverse Ranges Geomorphic Province, which extends from the San Bernardino Mountains in the east to the San Miguel, Santa Rosa, and Santa Cruz Islands in the west (Figure 2-1, Oxnard Subbasin Vicinity Map; CGS 2002). The Transverse Ranges Geomorphic Province is characterized by a series of east-to-west-trending mountain ranges and valleys that are formed by north–south compression across a restraining bend in the San Andreas Fault (Hadley and Kanamori 1977; Bohannon and Howell 1982; Eberhart-Philips et al. 1990; Nicholson et al. 1994). Compression across this restraining bend is responsible for rapid, ongoing uplift of the mountain ranges (Yeats 1988; Feigl et al. 1993; Marshall et al. 2008) and extensive folding and faulting of the Pleistocene and older geologic formations in the province (Rockwell et al. 1988; Huftile and Yeats 1995).

The Oxnard Subbasin underlies the Oxnard Plain, an approximately 58,000-acre coastal plain formed by deposition of sediments from the Santa Clara River and Calleguas Creek, in southwestern Ventura County (DWR 1965, 2006). The northern boundary of the Oxnard Subbasin is the Oak Ridge Fault, and the southern boundary is the contact between permeable alluvium and semipermeable rocks of the Santa Monica Mountains (SWRCB 1956; DWR 2006). The eastern boundary of the Oxnard Subbasin lies against the Las Posas Valley Basin (LPVB) and Pleasant Valley Basin (PVB). The western boundary of the Oxnard Subbasin is the Pacific Ocean (SWRCB 1956; DWR 2006).

The stratigraphic sequence underlying the Oxnard Plain comprises an upper unit of younger and older alluvial deposits that unconformably overlies the San Pedro and Santa Barbara Formations (Table 2-1). The San Pedro Formation is a lower to middle Pleistocene shallow marine deposit that grades upward from a white-gray sand and gravel basal layer into an overlying series of interbedded silts, clays, and gravels. The Santa Barbara Formation is a lower Pleistocene marine sand and clay deposit (SWRCB 1956; Weber and Kiessling 1976; Turner 1975). The primary water-bearing units in the Oxnard Subbasin are the alluvial deposits that compose the Oxnard and Mugu Aquifers and the white-gray sand and gravel layer of the San Pedro Formation that composes the Fox Canyon Aquifer (FCA; Table 2-1). In addition, wells in the Oxnard Subbasin also produce water from the Hueneme Aquifer in the Upper San Pedro Formation and the Grimes Canyon Aquifer (GCA) in the Santa Barbara Formation.

The shallowest aquifer in the Oxnard Subbasin is a semi-perched aquifer comprising sands and gravels deposited by the Santa Clara River. This unit is underlain by a clay layer, commonly referred to as the "clay cap," that is nearly continuous throughout the Subbasin, with the notable exception of an approximately 10-square-mile area in the northeastern part of the Subbasin, adjacent to and south of the Santa Clara River, referred to as the "Forebay area" (Figure 2-1; Mukae and Turner 1975). In this region, the Oxnard and underlying Mugu Aquifers are unconfined. In the areas where the clay cap separates the semi-perched aquifer from the underlying Oxnard Aquifer, the Oxnard Aquifer is confined. The area in which the Oxnard Aquifer is confined is referred to as the "pressure plain area" of the Oxnard Subbasin (Figure 2-1; Mukae and Turner 1975).

The majority of the Oxnard Subbasin lies within the jurisdiction of the Fox Canyon Groundwater Management Agency (FCGMA), with two exceptions (Figure 2-1). These exceptions include an area in the northeastern corner of the Oxnard Subbasin, at the western end of South Mountain, and along the southeastern edge of the Oxnard Subbasin adjacent to the foothills of the Santa Monica Mountains. The reason for the discrepancy is that the FCGMA boundary was established based on a vertical projection of the FCA as defined by the Fox Canyon Groundwater Management Agency Act in 1982, whereas the Oxnard Subbasin boundary is based on the surface extent of the alluvium in the Oxnard Plain, and the location of both geologic structures and facies changes that impede flow between the Oxnard Subbasin and neighboring groundwater basins (DWR 2006). The geologic and hydrologic descriptions of the Oxnard Subbasin in this Groundwater Sustainability Plan (GSP) are based on the boundaries of the Oxnard Subbasin, including the areas to the northeast and southeast which are outside of the FCGMA jurisdictional boundaries.

2.2 HYDROGEOLOGIC CONCEPTUAL MODEL

The six commonly recognized water-bearing units in the Oxnard Subbasin are the semi-perched aquifer and the Oxnard, Mugu, Hueneme, Fox Canyon, and Grimes Canyon Aquifers (DWR 1965, 2006; Turner 1975). Of the six commonly recognized water-bearing units, five are considered primary aquifers in the Oxnard Subbasin. The semi-perched aquifer is a water-bearing unit, but is not considered a primary aquifer in the Subbasin. The five aquifers are grouped into an Upper Aquifer System (UAS) and Lower Aquifer System (LAS), with the Oxnard and Mugu Aquifers composing the UAS and the Hueneme, Fox Canyon, and Grimes Canyon Aquifers composing the LAS. The UAS primarily comprises recent to upper Pleistocene age alluvial deposits of the Santa Clara River system. The LAS is primarily composed of upper to lower Pleistocene age marine sediments.

The Forebay area is the primary recharge area for the primary aquifers in the Oxnard Subbasin. In this area, the UAS rests directly on the folded and eroded upper surface of the Hueneme Aquifer and FCA. Water that recharges the UAS in the Forebay area is able to migrate throughout the Subbasin. Both the lithologic units and geologic structures present in the Oxnard Subbasin affect the hydrology of the Subbasin. These features are discussed in more detail in Sections 2.2.1 through 2.2.5.

2.2.1 Geology

Geologic Units and Variation

Tertiary Sedimentary and Igneous Formations

Tertiary sedimentary and igneous rocks that underlie the Oxnard Subbasin are generally considered semipermeable or non-water-bearing (Turner and Mukae 1975). These tertiary formations include the Oligocene/Eocene-age Sespe Formation, the lower Miocene Conejo Volcanics, the upper Miocene Modelo and Monterey Formations, and the Pliocene Pico Formation (Table 2-1; Weber and Kiessling 1976; Dibblee 1992a, 1992b). These formations have been sampled in deep wells drilled in the Oxnard Subbasin (Figure 2-2, Geology of the Oxnard Subbasin; Turner 1975; Weber and Kiessling 1976). These formations are not considered an important source of groundwater in the Oxnard Subbasin (Turner 1975).

Quaternary Sedimentary Formations

Santa Barbara Formation (Lower Pleistocene; Marine)

The Santa Barbara Formation typically comprises laminated, poorly indurated blue-gray marine mud- and siltstone with sand and gravel (Table 2-1; Turner and Mukae 1975). The upper clay-rich sediments act as an aquitard between the Santa Barbara Formation and the overlying San Pedro Formation (Weber and Kiessling 1976). The localized basal conglomerate within the upper member of the Santa Barbara Formation hosts the GCA (Weber and Kiessling 1976).

San Pedro Formation (Lower to Middle Pleistocene; Marine and Nonmarine)

The San Pedro Formation is an interbedded, poorly lithified fine marine, silty sandstone, shale, and mudstone with local pebble conglomerate and an extensive basal sand unit that unconformably overlies the Santa Barbara Formation in the Oxnard Subbasin (Mukae and Turner 1975; Weber and Kiessling 1976).

The upper and lower parts of the San Pedro Formation are separated by a laterally extensive clay marker bed (Turner 1975). Overlying the clay marker bed are lenticular layers of sand, gravel, and silt (Mukae and Turner 1975). The lenticular deposits of sand and gravel in the Upper San Pedro Formation are known as the Hueneme Aquifer in the Oxnard Subbasin. The sediments of the Upper San Pedro Formation coarsen to the west, with a larger percentage of sand and gravel in the western part of the Subbasin and a larger percentage of fines in the eastern part of the Subbasin, particularly in the area adjacent to the boundary with the LPVB.

In contrast, the basal unit of the San Pedro Formation fines to the west. This unit comprises a 100- to 600-foot-thick continuous white or gray fine to medium marine sand with stringers of gravel

and local silt and clay lenses (Turner 1975).[1] The lower part of the San Pedro Formation is the FCA, which is an important source of groundwater supply in the Oxnard Subbasin (Turner 1975).

Older Alluvium (Upper Pleistocene; Terrestrial)

The older alluvium, which comprises gravel, sand, silt, and clay, unconformably overlies the Upper San Pedro Formation. The older alluvium can be divided into two units: an upper clay zone and a lower sand and gravel zone (Mukae and Turner 1975). The Mugu Aquifer occurs in the sand and gravel zone at the base of the older alluvium (Mukae and Turner 1975).

Recent Alluvium (Holocene; Terrestrial)

The recent alluvium in the Oxnard Subbasin comprises sands and gravels interbedded with silt and clay (DWR 1965). These sediments, which unconformably overlie the older alluvium, reach a thickness of up to 300 feet. The basal unit includes coarse sands and gravels intercalated with clay layers (Mukae and Turner 1975). Overlying the basal unit throughout much of the Subbasin is a laterally continuous clay layer that reaches a thickness of up to 160 feet locally. The Oxnard aquifer occurs in the sand and gravel layer below the clay. Above the clay is the semi-perched aquifer.

Geologic Structure

Wright Road Fault

The Wright Road Fault is an active oblique right reverse fault that generally parallels the eastern jurisdictional boundary of the Oxnard Subbasin, separating the LPVB to the east from the Oxnard Subbasin to the west (Figure 2-2; DeVecchio et al. 2007). The fault trace is characterized by a 20-meter-high (66-foot-high) topographic scarp with up-to-the-east displacement along the north-northwest-trending fault (DeVecchio et al. 2007). There is no evidence that the Wright Road Fault impacts groundwater flow between the Oxnard Subbasin and the LPVB.

Oak Ridge and McGrath Faults

The Oak Ridge Fault is a high-angle, south-dipping, left-lateral reverse fault that juxtaposes water-bearing alluvium and older, semipermeable formations in the subsurface (Figure 2-2; SWRCB 1956). To the east of the Oxnard Subbasin, anticlinal folding in the hanging wall of the Oak Ridge Fault resulted in the Oak Ridge and South Mountain uplift (Yeats 1988). In the Oxnard Subbasin, the western extent of the Oak Ridge Fault is concealed beneath the recent alluvium (Mukae and Turner 1975).

[1] This marine sand has been identified as both the Saugus Formation (Kew 1924; Jakes 1979) and the Las Posas Sand (Pressler 1929, as cited in DeVecchio et al. 2012a.; Dibblee 1992a, 1992b; DeVecchio et al. 2012b). The term "San Pedro Formation" is used here for consistency with California Department of Water Resources nomenclature (DWR 2006).

The McGrath Fault, located approximately 1 mile south of the Oak Ridge Fault along the coast in the Oxnard Subbasin, is a branch of the Oak Ridge Fault system with the same sense of motion (Mukae and Turner 1975). The McGrath Fault defines the northerly limit of the Forebay area (Turner 1975). Together, the McGrath and Oak Ridge Faults limit hydraulic communication between the Oxnard Subbasin to the south and the Mound and Santa Paula Subbasins of the Santa Clara River Valley Groundwater Basin to the north.

Bailey Fault

Along the northern edge of the Santa Monica Mountains, the Bailey Fault Zone trends northeast–southwest through the Oxnard Subbasin (Figure 2-2; Turner 1975). The Bailey Fault is a near-vertical fault with up-to-the-south displacement in the subsurface that offsets quaternary sedimentary formations to the north with older formations to the south (Turner 1975). Groundwater elevation differences and chloride ion concentration differences across the fault suggest that it is a barrier to groundwater movement (Turner 1975). The FCA is absent to the south of the Bailey Fault.

Las Posas Syncline

The Las Posas syncline has resulted in thickening and downwarping of the San Pedro Formation and older formations in the central part of the Oxnard Subbasin (Figure 2-2). The axis of the Las Posas syncline trends northeast from its western mapped extent at the intersection of West 5th Avenue and Harbor Boulevard, through El Rio, and into the Las Posas Valley (Turner 1975). At the deepest part of the Las Posas syncline, the Upper San Pedro Formation reaches a thickness of approximately 1,150 feet (Mukae and Turner 1975).

Montalvo Anticline

Deformation in the hanging wall of the Oak Ridge and McGrath Faults has resulted in anticlinal structures on the northern boundary of the Oxnard Subbasin, including the Montalvo anticline (Figure 2-2). The Upper San Pedro Formation has been eroded away in the Forebay area of the Oxnard Subbasin along the axis of the anticline (Turner 1975). Erosion of the Upper San Pedro Formation results in direct communication between the alluvium and the white and gray marine sands of the Lower San Pedro Formation that compose the FCA.

2.2.2 Basin Bottom

The bottom of the Oxnard Subbasin generally corresponds to the base of the San Pedro Formation and the base of the FCA in the northern and western parts of the Subbasin, where the Santa Barbara Formation is absent (Figure 2-2 and Figure 2-3, Cross Section A–A′; Turner 1975). In the southern and eastern parts of the Subbasin, where the Santa Barbara Formation is present, the bottom of the

Subbasin is defined by the contact between the upper member of the Santa Barbara Formation, the GCA, and the underlying strata that have poor water quality (Figure 2-4, Cross Section B–B′).

In general, the bottom of the Oxnard Subbasin is shallower in the east and deeper in the west. Along the eastern margin of the Subbasin, the Subbasin bottom has been mapped at elevations between 0 feet above mean sea level (msl) and −1,200 feet msl (Turner 1975). Along the western edge of the Subbasin, the Subbasin bottom depth ranges from −400 to more than −1,800 feet msl (Turner 1975). The deepest part of the Subbasin occurs along the axis of the Las Posas syncline in the north-central part of the Subbasin.

2.2.3 Principal Aquifers and Aquitards

Semi-Perched Aquifer

River-deposited sands and gravels interbedded with minor silt and clay compose the semi-perched aquifer in the Oxnard Subbasin (DWR 1965; Turner 1975). The term "semi-perched aquifer" is used in this GSP as the name for the uppermost unit of the Oxnard Subbasin, which overlies the extensive clay cap in the pressure plain area of the Oxnard Subbasin (Figure 2-2 and Table 2-1). This name was used in the State Water Resources Control Board's Bulletin 12 (SWRCB 1956) to distinguish the water-bearing sedimentary units in the pressure plain area from those in the Forebay area, and this terminology has been adopted by subsequent investigators (Mukae and Turner 1975; Turner 1975; Hanson et al. 2003; DWR 2006). Water-level data indicate that the sediments underlying the semi-perched aquifer are saturated. Therefore, the term "semi-perched aquifer" is used in this GSP to denote the limited migration of water from the uppermost aquifer to the underlying confined aquifer in the pressure plain area. It is not used to denote a discontinuity in saturation. Furthermore, there is limited groundwater production (<50 acre-feet per year [AFY]) from this unit (see Section 2.4, Water Budget). Therefore, although this unit is referred to as the "semi-perched aquifer," it is not considered to be a principal aquifer in the Subbasin.

The semi-perched aquifer is part of the recent alluvium described in Section 2.2.1, Geology. This aquifer extends from the base of developed soil horizons to a depth of approximately 75 feet throughout most of the Subbasin (Turner 1975). Notably, this aquifer is absent in the Forebay area of the Oxnard Subbasin adjacent to and south of the present course of the Santa Clara River. The permeable sand and gravel deposits of the semi-perched aquifer tend to be continuous in a northeast–southwest orientation, which is similar to the present orientation of the Santa Clara River and lenticular to the northwest and southeast (Turner 1975).

The lenticular shape of the semi-perched aquifer deposits limits flow in the northwest–southeast direction and facilitates flow in the northeast–southwest direction. These deposits have not been affected by faulting or folding in the Subbasin, and there are no structural restrictions to flow through the semi-perched aquifer (UWCD Model Report [2018], provided as Appendix C to this GSP).

Agricultural return flows, saline connate water, and coastal flooding affect both groundwater quality and groundwater elevation in the semi-perched aquifer (Mukae and Turner 1975). The highest water levels in the aquifer, which are typically within a few feet of land surface, are found in heavily irrigated areas (Turner 1975). Tile drains are used throughout the Oxnard Subbasin to alleviate the high groundwater conditions. Agricultural return flows that cause the high water conditions have resulted in high concentrations of total dissolved solids (TDS) and chloride (as high as 23,000 milligrams per liter [mg/L]) in the semi-perched aquifer (Turner 1975; USGS 1996).

Clay Cap

Underlying the semi-perched aquifer is a clay layer that separates the semi-perched aquifer from the Oxnard Aquifer below (Turner 1975). The thickness of the clay cap is approximately 160 feet adjacent to the Pacific Ocean. The clay cap is absent in the Forebay area (DWR 1968; Mukae and Turner 1975). Although the clay cap functions as an aquitard, water can migrate vertically through the clay cap under conditions of differential head (Turner 1975), and in some cases, through casings of wells that have been improperly abandoned.

Oxnard Aquifer

The Oxnard Aquifer is a laterally continuous layer of upper Pleistocene and Holocene nonmarine gravel and cobbles (up to 6 inches in diameter); coarse to fine sand; and interbedded clay, silty clay, and silt lenses (Turner 1975). The deposits that compose this aquifer are part of the recent alluvium and are found beneath the entire Oxnard Subbasin and extend several miles offshore, where they are exposed in the walls of the Hueneme and Mugu submarine canyons (DWR 1965, 1968). The deposits tend to be finer near the coast and coarsen to the east (Turner 1975; DWR 2006). The local silty clay and silt lenses restrict both horizontal and vertical movement of water through the aquifer, and distinct permeable horizons have been identified in logs (DWR 1971).

The top of the Oxnard Aquifer has been shaped by differential erosion and sedimentation of the Santa Clara River (Turner 1975). Throughout much of the Oxnard Subbasin, a clay-rich aquitard that ranges in thickness from 10 to 100 feet separates the Oxnard Aquifer system from the underlying Mugu Aquifer (Mukae and Turner 1975). The basal surface of the clay is more uniform than the upper surface and generally deepens to the west–southwest (DWR 1968). The thickness of the Oxnard Aquifer also generally increases to the west-southwest, with a minimum thickness of less than 50 feet in the vicinity of the Forebay area and reaching a maximum thickness of greater than 150 feet in the vicinity of Point Mugu (DWR 1968; Turner 1975).

Flow of groundwater through the Oxnard Aquifer is controlled by lithologic variability. The only structural feature that restricts flow in this aquifer is the Bailey Fault, in the southern Oxnard Subbasin (Appendix C). The Oxnard Aquifer crops out offshore in the Hueneme and Mugu canyons, making it susceptible to seawater intrusion. The chloride concentration of native water

in the Oxnard Aquifer is approximately 40 mg/L (similar to background values in the Mugu and Hueneme Aquifers), although this concentration varies with geographic location in the Subbasin (USGS 1996). In the vicinity of the Hueneme and Mugu submarine canyons, chloride concentrations have been affected by seawater intrusion. In 2016, the chloride concentration in the vicinity of Hueneme Canyon was as high as 4,800 mg/L, and in the vicinity of Mugu Canyon the chloride concentration was as high as 16,600 mg/L (FCGMA 2016).

The specific yield of the gravels of the Oxnard Aquifer is about 16% in the Forebay area where there are few clay deposits and the aquifer is unconfined (SWRCB 1956; DWR 2006). Wells screened in the Oxnard Aquifer are typically screened in multiple aquifers, including the underlying Mugu Aquifer. (For information on well construction requirements intended to prevent degradation of water quality of the aquifers in the LAS—referred to as requirements for "sealing zone"—see DWR 1968). The California Department of Water Resources (DWR) reports that the average well yield in the Oxnard Aquifer is about 900 gallons per minute (gpm; DWR 2006). Aquifer test results for two wells screened solely within the Oxnard Aquifer, however, have a higher average well yield, of approximately 1,500 gpm, with an average specific capacity of 47 gpm per foot (Hopkins, pers. comm. 2016). Storage coefficients of 6.18×10^{-4} and 3×10^{-4} were estimated from pumping test data at these two wells, and the transmissivity was estimated to be approximately 20,400 feet squared per day (Hopkins, pers. comm. 2016). The well yield and specific capacity were measured at three additional wells screened solely in the Oxnard Aquifer, although aquifer tests were not performed at these wells. The average well yield and specific capacity for these wells is 2,450 gpm and 108 gpm per foot. Based on these measurements, the average transmissivity is approximately 32,000 feet squared per day (Hopkins, pers. comm. 2016).

Water quality in the Oxnard Aquifer has been degraded by seawater intrusion and leakage of agricultural return flows through the clay cap separating the Oxnard Aquifer from the overlying semi-perched aquifer (UWCD 2016a). Seawater intrusion has been documented in both the Port Hueneme and Port Mugu areas (Turner 1975; UWCD 2016a). Water produced from this aquifer is used for agricultural and municipal and industrial (M&I) purposes.

Mugu Aquifer

The sediments that compose the Mugu Aquifer are upper Pleistocene age fine to coarse sands and gravels (DWR 1965; Turner 1975). These sand and gravel deposits are laterally extensive throughout the Subbasin and represent the basal deposits of the older alluvium. In general, the sediments of the Mugu Aquifer are finer near the coast and coarsen to the east (Turner 1975). A low-permeability clay deposit that ranges in thickness from 10 to 100 feet separates the Mugu Aquifer from the overlying Oxnard Aquifer throughout much of the Oxnard Subbasin. However, the clay layer is absent in the Forebay area of the Subbasin near the Santa Clara River (DWR 1965; SWRCB 1979; Turner 1975). The Mugu Aquifer ranges in thickness from approximately 30 feet in the Forebay to approximately 270 feet in the vicinity of Point Mugu (DWR 1965; Turner 1975).

The Mugu Aquifer extends several miles offshore and crops out offshore in the Hueneme and Mugu canyons, making it susceptible to seawater intrusion. The chloride concentration of native water in the Mugu Aquifer is approximately 40 mg/L (USGS 1996). In the vicinity of the Hueneme and Mugu submarine canyons, however, chloride concentrations have been affected by seawater intrusion. In 2016, the chloride concentration in the vicinity of Mugu Canyon was as high as 3,200 mg/L (FCGMA 2016).

The base of the Mugu Aquifer was deposited over an irregular surface that has been affected by both folding and erosion (Turner 1975). The extensive folding of the aquifers underlying the Mugu Aquifer, however, has not been documented within the sediments of the Mugu Aquifer. Within the boundaries of the DWR Bulletin 118 basin, the only documented fault that acts as a barrier to flow is the Bailey Fault in the southern part of the Subbasin. Offshore, however, additional faults that act as barriers to flow exist in the vicinity of the Mugu submarine canyon (Hanson et al. 2003; Appendix C).

Wells screened in the Mugu Aquifer are typically screened in multiple aquifers, including the overlying Oxnard Aquifer. DWR does not report aquifer properties specifically for the Mugu Aquifer (DWR 2006). In the Forebay, Well 02N22W36E04S, screened solely within the Mugu Aquifer, has a well yield of 1,500 gpm, a specific capacity of 17.8 gpm per foot, and an estimated transmissivity of 7,900 feet squared per day (Hopkins, pers. comm. 2016). For wells screened in both the Oxnard and Mugu Aquifers, the average yield is 2,300 gpm, the average specific capacity is 110 gpm per foot, and the average estimated transmissivity is 29,000 feet squared per day (Hopkins, pers. comm. 2016). Water produced from this aquifer is used for agricultural and M&I purposes.

Hueneme Aquifer

The Hueneme Aquifer comprises a series of lenticular silts, sands, and gravels in the Upper San Pedro Formation. This aquifer is present in the northern part of the Oxnard Subbasin but is absent to the south of Hueneme Roads (Mukae and Turner 1975). Within the Oxnard Subbasin, the Hueneme Aquifer is up to 1,150 feet thick along the axis of the Las Posas syncline (Turner 1975). The Hueneme Aquifer extends several miles offshore and crops out in the Hueneme and Mugu submarine canyons.

Changes in lithologic composition, with the aquifer generally containing a higher percentage of fine materials adjacent to the LPVB and PVB, affect flow through the aquifer. The change in composition is accompanied by an increase in the lenticular nature of the deposits that compose the Hueneme Aquifer along the eastern boundary of the Oxnard Subbasin. These changes limit subsurface flow between the Oxnard Subbasin and the LPVB and PVB to the east.

In addition to changes in lithology, structural folding of the Hueneme Aquifer also affects subsurface flow (Turner 1975). Folding, subsequent erosion, and recent deposition have resulted in a direct hydraulic connection between the Hueneme Aquifer and the overlying Mugu Aquifer throughout much of the Oxnard Subbasin (Turner 1975). However, in the southwestern portion of the basin, where seawater intrusion has affected the Mugu Aquifer, the Mugu and Hueneme Aquifers are not in direct hydraulic communication. As a result, water quality in the Hueneme Aquifer has not been affected by seawater intrusion in this area (Turner 1975; Hanson et al. 2003). Offshore faulting in the Hueneme Aquifer also limits direct seawater intrusion into the aquifer in the vicinity of Mugu Canyon, and faulting along the northern and southern boundaries of the Oxnard Subbasin limit flow out of the Hueneme Aquifer to the Mound Basin or to the south of the Bailey Fault (Hanson et al. 2003; Appendix C).

The chloride concentration of native water in the Hueneme Aquifer is approximately 40 mg/L (USGS 1996). In the vicinity of Point Hueneme, the chloride concentration of the Hueneme Aquifer was as high as 9,900 mg/L in 2016 (FCGMA 2016).

Wells screened solely within the Hueneme Aquifer have an average yield of approximately 2,500 gpm and an average specific capacity of 38 gpm per foot (Hopkins, pers. comm. 2016). Storage coefficients of 2×10^{-4} and 3×10^{-4} were estimated from pumping test data at two wells and the transmissivity was estimated to be approximately 13,400 feet squared per day (Hopkins, pers. comm. 2016). Water produced from this aquifer is used for agricultural and M&I purposes.

Fox Canyon Aquifer

The FCA is a 100- to 600-foot-thick marine sand and gravel deposit in the Lower San Pedro Formation (Mukae and Turner 1975). The water-bearing deposits of the FCA fine toward the west (Turner 1975). This unit is laterally continuous throughout the Oxnard Subbasin except at the western tip of South Mountain, where the Santa Barbara Formation is in direct contact with the Mugu Aquifer, and in the southwestern part of the Subbasin, where uplift and erosion have removed the FCA (Turner 1975). In the northern and western parts of the Subbasin, the FCA defines the base of the freshwater zone.

In the Oxnard Subbasin, the FCA is thickest along the axis of the Las Posas syncline. In this area, the FCA reaches thickness in excess of 500 feet, and the base of the aquifer is below −2,000 feet msl (Turner and Mukae 1975; Turner 1975). The primary source of freshwater recharge to the FCA is infiltration through the Oxnard and Mugu Aquifer systems in the Forebay area (Turner 1975; FCGMA 2007).

As with the other primary aquifers in the Oxnard Subbasin, the FCA extends several miles offshore and water quality in the FCA has been impacted by seawater intrusion. The native water in the FCA had a chloride concentration of 40 mg/L (USGS 1996). Chloride concentration measured in

2002 from a well in the southeastern part of the Subbasin ranged from 183 to 367 mg/L (Izbicki et al. 2005). However, the concentration of chloride measured in Well 01N21W32Q04, located inland of Mugu Canyon in the southern part of the Subbasin, was 5,070 mg/L in 2015.

Offshore faulting in the vicinity of Mugu Canyon is thought to limit direct seawater intrusion into the FCA (Hanson et al 2003; Appendix C). Instead, increasing concentrations of chloride in the FCA near Mugu Canyon are thought to originate in the aquifers of the UAS and migrate vertically into the FCA.

There are no aquifer-specific hydraulic parameter measurements for the FCA. Several specific capacity aquifer tests have been conducted in the Oxnard Subbasin, but typically these tests occur in wells screened across multiple aquifers (Appendix C). More detail on the limitations of hydraulic parameter measurements is found in the UWCD model documentation report (Appendix C). Well 02N22W20J02S, in the northern Oxnard Subbasin, is screened in both the FCA and overlying Hueneme Aquifer. This well has a yield of 3,030 gpm, a specific capacity of 95.3 gpm per foot, and a transmissivity of 40,100 feet squared per day (Hopkins, pers. comm. 2016). Water produced from this aquifer is used for agricultural and M&I purposes.

Grimes Canyon Aquifer

The GCA comprises lower Pleistocene age sand with minor amounts of gravel. This aquifer corresponds with the basal conglomerate within the upper member of the Santa Barbara Formation and is only found underlying the southern and eastern parts of the Oxnard Subbasin (Turner 1975). In the southern part of the Subbasin, the GCA is found in a band approximately 5 miles wide along the base of the Santa Monica Mountains from the Pacific Ocean to the boundary with the PVB to the east (Turner 1975). Throughout the rest of the Subbasin, the Grimes Canyon member of the Santa Barbara Formation is absent. As with the other aquifers in the Subbasin, the GCA extends several miles offshore.

The GCA, where present in the Oxnard Subbasin, is in hydraulic communication with the overlying FCA, and there are no production wells perforated solely in the GCA (Turner 1975; VCWPD 2013). As a result, there is little information on the water quality or aquifer properties of the GCA. Water quality has been sampled in some basal portions of the aquifer, and has been found to have brackish water that is likely a result of limited flushing since deposition and upward migration of brines from underlying formations (Mukae and Turner 1975; Turner 1975; Hanson et al. 2003).[2, 3] In addition, seawater intrusion may have impacted some wells screened in the GCA (see Section 2.3.3, Seawater Intrusion). Direct seawater flow into the GCA in the vicinity of Mugu Canyon is thought to be limited

[2] Brackish water is typically defined as water with a concentration of total dissolved solids (TDS) between 3,000 and 10,000 mg/L.

[3] Brines typically have concentrations of TDS greater than 35,000 mg/L.

by offshore faulting (Hanson et al 2003; Appendix C). Concentrations of chloride have been increasing in this area since the 1990s. In 2016 the groundwater concentration measured in a sample collected from Well 01S21W08L03S was 6,428 mg/L (FCGMA 2016). Measured aquifer properties specific to the GCA are not currently available.

2.2.4 Data Gaps and Uncertainty in the Hydrogeologic Conceptual Model

The primary data gaps in the hydrogeologic conceptual model are as follows:

- Distributed measurements of aquifer properties from wells screened solely in a single aquifer
- Distributed measurements of groundwater quality from wells screened solely in a single aquifer
- Measurements of groundwater quality that distinguish the sources of high TDS concentrations in the FCA and the GCA
- Temporal limitations on groundwater elevation data
- Spatial limitations on groundwater elevation data
- The relative impacts of production from areas within the Subbasin on seawater intrusion
- Connection between the semi-perched aquifer and potential groundwater-dependent ecosystems (GDEs)
- Potential impacts of increased production in the semi-perched aquifer

The data gaps listed above create uncertainty in the understanding of the impacts of water level changes on change in storage in the aquifer and on the inland extent of seawater intrusion in the aquifers. Additional aquifer tests, groundwater elevations, and groundwater quality sampling in the future would help reduce the uncertainty associated with these data gaps. Closing the data gaps is discussed further in Chapter 4, Monitoring Networks, of this GSP.

2.3 GROUNDWATER CONDITIONS

2.3.1 Groundwater Elevation Data

Groundwater elevations in the Oxnard Subbasin were first measured in agricultural wells in the 1930s, and multiple entities, including the United Water Conservation District (UWCD), DWR, and the County of Ventura (the County), have recorded water elevations in the Oxnard Subbasin over the intervening decades. In the early 1990s, after the U.S. Geological Survey (USGS) installed a series of nested monitoring wells during the Regional Aquifer System Analysis (Densmore 1996), an annual groundwater monitoring program was initiated in the Subbasin by the County, UWCD, and USGS (FCGMA 2007). The groundwater monitoring programs conducted by the

Ventura County Watershed Protection District and other agencies, including UWCD, include production wells and multiple-completion nested monitoring wells. Many of the production wells included in the monitoring program are screened across multiple aquifers. Historically, the FCGMA annual reports have included potentiometric surface maps for wells screened in the UAS and wells screened in the LAS since 2013 (FCGMA 2015).

To conform with the DWR GSP Regulations, Section 354.16, the following discussion of groundwater elevation is limited to production and monitoring wells screened in a single aquifer. Water level measurements collected between March 2 and March 29, 2015, are used to represent groundwater elevations in spring 2015. Water level measurements collected between October 2 and 29, 2015, are used to represent groundwater elevations in fall 2015.

Because many production wells within the Subbasin are screened across multiple aquifers and there are a limited number of dedicated monitoring wells, the depiction of representative regional potentiometric surfaces in each aquifer is limited. Similarly, the depiction of groundwater trends is also limited by spatial and temporal constraints that are imposed when only using wells screened in a single aquifer. Groundwater pumping data for the year 2015 were mapped to provide context for interpreting the potentiometric surfaces presented in this section (see Figure 2-5, Upper Aquifer System 2015 Extraction [acre-feet] in Oxnard and Pleasant Valley and Figure 2-6, Lower Aquifer System 2015 Extraction [acre-feet] in Oxnard and Pleasant Valley). Self-reported groundwater extraction data for 2015 are shown in Figures 2-5 and 2-6 for wells screened in the UAS and LAS, respectively. In the UAS, the location of the greatest amount of extraction is within the Forebay, with additional extraction areas both west and southeast of the City of Oxnard (Figure 2-5). The majority of the production from the LAS is in the southeastern portion of the Subbasin (Figure 2-6). The volume of groundwater extracted from the LAS is greater than that extracted from the UAS.

Current and historical groundwater elevations are discussed below by aquifer. Full hydrographs for all Oxnard Subbasin wells in which five or more water level measurements have been recorded are included in Appendix D, Water Elevation Hydrographs. In general, climate cycles, management actions, and the construction of water conservation facilities have impacted water elevations in the Oxnard Subbasin. The Freeman Diversion, completed in 1991, allows UWCD to divert surface water from the Santa Clara River to spreading basins, where it can infiltrate into the aquifers of the UAS and be transported via pipelines to other areas. This additional recharge enhanced aquifer recovery in the 1990s after a period of drought (FCGMA 2007). Additionally, UWCD's Pumping Trough Pipeline (PTP), constructed in 1986, which delivers diverted Santa Clara River water to agricultural parcels on the Oxnard Plain in lieu of groundwater production from that area, resulted in rising groundwater elevations during the late 1980s. In 1991, Ventura County adopted Ordinance 3991, which provided a temporary prohibition on drilling of new wells in the UAS, which also contributed to water elevation recovery in the UAS in the 1990s.

2.3.1.1 Oxnard Aquifer

Spring and Fall 2015 Groundwater Elevations

In the spring of 2015, recorded groundwater elevations in the Oxnard Aquifer wells ranged from −27.2 to 46.3 feet msl (Figure 2-7, Groundwater Elevation Contours in the Oxnard Aquifer, March 2–29, 2015). In the fall of 2015, recorded groundwater elevations ranged from −30.7 to 37.9 feet msl (Figure 2-8, Groundwater Elevation Contours in the Oxnard Aquifer, October 2–29, 2015).

Groundwater flows from areas of high groundwater elevation to areas of low groundwater elevation. The highest groundwater elevations in the Oxnard Aquifer are found in the Forebay in both the fall and spring of 2015 (Figures 2-5 and 2-7). The hydraulic gradient in the Forebay in the spring of 2015 was approximately 0.005 feet/feet with groundwater flowing to the south and southwest, toward the pumping centers west and southeast of the City of Oxnard. In the fall of 2015, the hydraulic gradient was approximately 0.005 feet/feet with groundwater flowing to the southwest and southeast.

Elsewhere in the Subbasin, groundwater elevations in the Oxnard Aquifer are higher on the western and eastern boundaries of the Subbasin than they are in the center of the Subbasin. In this central area, groundwater elevations are more than −20 feet msl in both the spring and fall of 2015, though the areal extent of lower elevations is much greater in fall than in spring (Figures 2-7 and 2-8). In general, elevations in the UAS in the central Oxnard Subbasin are above sea level during wet climatic periods and fall below sea level during droughts (UWCD 2016a). Artesian conditions can occur in the western Oxnard Subbasin during wet climatic cycles (UWCD 1999).

The central area of low elevations reflects the groundwater production from wells southeast of the City of Oxnard in the central Oxnard Subbasin (Figure 2-5). The hydraulic gradient, directed toward the production wells, was less than approximately 0.001 feet/feet in both the spring and fall of 2015. Coastal elevations were measured below or near sea level in both spring and fall of 2015, and consequently, the hydraulic gradient was generally landward at the coast (Figures 2-7 and 2-8).

There is uncertainty associated with the groundwater elevation contours, hydraulic gradient, and groundwater flow direction in the Oxnard Aquifer in the spring and fall of 2015. Fewer wells are screened solely within the Oxnard Aquifer than are producing groundwater from the Oxnard Aquifer. The majority of the wells that produce groundwater in the Oxnard Aquifer are screened across multiple aquifers. These wells were not used to create the contour maps in order to conform with the DWR GSP Regulations, Section 354.14. The uncertainty in hydraulic gradient, flow direction, and groundwater elevation within the Oxnard Aquifer is particularly pronounced in the southern Oxnard Subbasin, where there are few wells screened solely within the Oxnard Aquifer but several production wells screened in multiple aquifers (Figures 2-7 and 2-8).

Vertical Gradients

Groundwater elevations in the Oxnard Aquifer are higher than those in the underlying Mugu Aquifer, resulting in a downward vertical gradient from the Oxnard Aquifer to the Mugu Aquifer in all areas of the Oxnard Subbasin for which Mugu-specific elevation data are available (Table 2-2). The magnitude of the vertical gradient varies with distance from the coast. The downward vertical gradient between the Oxnard and Mugu Aquifers was calculated for five wells in the fall of 2015 (Table 2-2). The wells in Table 2-2 were selected from a larger group of nested groundwater monitoring wells to represent the vertical gradient at different geographic locations in the Subbasin.

In the spring of 2015, the vertical gradient from the Oxnard Aquifer to the underlying Mugu Aquifer ranged from 0.004 feet/feet at the coast near Port Hueneme to 0.278 feet/feet inland of Point Mugu (Table 2-2). In the fall of 2015, the vertical gradient from the Oxnard Aquifer to the underlying Mugu Aquifer ranged from 0.002 feet/feet at the coast near Port Hueneme to 0.468 feet/feet inland of Point Mugu (Table 2-2). The vertical gradients along the coast are lower than they are inland, possibly reflecting the influence of seawater in the aquifer, moderating water levels at the coast. Alternatively, the vertical gradients may be lower at the coast because there is less pumping near the coast (Figures 2-5 and 2-6), and gradients may be higher in some inland areas that are closer to the Forebay area, as recharge in the Forebay affects water pressure in the Oxnard Aquifer more than the other aquifers.

The vertical gradient between the Oxnard and Mugu Aquifers was higher in the fall than in the spring, except at the coast where it was the same in the spring and fall (Wells 01N22W20M02S and 01N22W20M03S), and in the Forebay where the gradient was higher in the spring than in the fall (Wells 02N22W23B07S and 02N22W23B08S). The vertical gradient in the Forebay was higher in the spring because of surface water spreading grounds in the Forebay that are primarily used during periods of higher flow in the Santa Clara River.

Vertical gradients within the Oxnard Aquifer were determined from monitoring well clusters 01N21W19L, 02N22W23B, and 01N22W28G, which have two screen intervals within the Oxnard Aquifer (Table 2-2). For each of these locations, the vertical hydraulic gradient within the Oxnard Aquifer was directed downward. The downward vertical hydraulic gradient ranged from 0.009 to 0.278 feet/feet in the spring of 2015. In the fall of 2015, the downward vertical gradient ranged from 0.016 to 0.643 feet/feet. The downward vertical hydraulic gradient was larger in the fall than in the spring, and the largest downward vertical hydraulic gradient was in the Oxnard Forebay (Forebay). The smallest downward vertical hydraulic gradient within the Oxnard Aquifer was adjacent to the coast (Table 2-2; Figure 2-8).

Historical Groundwater Elevation Trends

Groundwater elevations in the Oxnard Aquifer have declined and recovered over climatic cycles since the 1930s (Figure 2-9a, Groundwater Well Hydrographs in the Oxnard Aquifer – Oxnard Plain). Management policies and the construction and operation of water conservation facilities have also impacted historical groundwater elevations (see Section 2.3.1, Groundwater Elevation Data). Full hydrographs for Oxnard Subbasin wells with five or more groundwater elevation measurements are included in Appendix D.

Groundwater elevation trends in Well 01N21W07H01S, the well with the longest historical groundwater elevation record in the Oxnard Subbasin, track with the trends observed in the record of cumulative departure from the mean precipitation on the Oxnard Plain (Figure 2-9a). Declines in groundwater elevation occurred between 1941 and 1966, 1970 and 1977, 1984 and 1990, and 2011 and 2016, coincident with periods of drought shown in the declining limb of the cumulative departure from the mean precipitation curve (Figure 2-9a). Groundwater elevations recovered after each historical drought period, but have not yet recovered from the drought beginning in 2011. The amount of historical recovery depended on the length of time between droughts and the amount of precipitation received in each of the water years between the droughts, as well as management measures, including surface water spreading and deliveries, operative during the various periods. By 1980, the groundwater elevation recovered to within 10 feet of the previous maximum measured in 1941, and by 1999, water levels exceeded the 1941 maximum (Figure 2-9a), likely due to several wet years during the 1990s and the influence of management actions taken, and water conservation facilities constructed, in the 1980s and 1990s (see Section 2.3.1). In the late 1990s, artesian conditions were documented in the western Oxnard Subbasin (UWCD 1999). Since 2011, groundwater elevations in this well have declined approximately 40 feet.

The patterns of water level decline and recovery observed in Well 01N21W07H01S are observed in Oxnard Aquifer wells throughout the Oxnard Subbasin, although absolute changes in water level vary geographically within the Oxnard Subbasin (Figure 2-9a and Figure 2-9b, Groundwater Well Hydrographs in the Oxnard Aquifer – Forebay Area). Wells in the Forebay area and northeastern Oxnard Subbasin have experienced water level declines of approximately 90 feet since 2011 (Figure 2-9b), while water levels in wells adjacent to the coast and in wells farther south have declined between 18 and 40 feet over the same period (Figure 2-9a). The larger water level changes observed in the northeastern Oxnard Subbasin reflect the influence of UWCD's managed aquifer recharge activities in the Forebay area; additionally, water level changes at the coast may be smaller due to the fact that seawater may be intruding and occupying volume within the aquifer as freshwater recedes.

Although groundwater elevations in the Oxnard Subbasin recover to some degree after each drought period, elevations in coastal wells do not always recover to mean sea level. Historical elevations of coastal wells over time in relation to sea level are discussed in Section 2.3.3.

2.3.1.2 Mugu Aquifer

Spring and Fall 2015 Groundwater Elevations

In the spring of 2015, recorded groundwater elevations in the Mugu Aquifer in the Oxnard Subbasin ranged from −60.7 to 8.2 feet msl (Figure 2-10 Groundwater Elevation Contours in the Mugu Aquifer, March 2–29, 2015). In the fall of 2015, groundwater elevations ranged from −97.7 to −12.1 feet msl (Figure 2-11, Groundwater Elevation Contours in the Mugu Aquifer, October 2–29, 2015).

The highest groundwater elevations in the Mugu Aquifer are found in the Forebay in both the fall and spring of 2015 (Figures 2-10 and 2-11). The hydraulic gradient in the Forebay in the spring of 2015 was approximately 0.003 feet/feet with groundwater flowing to the south and southwest. In the fall of 2015, the hydraulic gradient was approximately 0.002 feet/feet with groundwater flowing to the south and southwest. These gradients are based on the wells that are screened solely within the Mugu Aquifer, which are primarily located in the eastern part of the Subbasin. Groundwater elevations in the Mugu Aquifer are lowest in the southeastern area of the Subbasin. In general, elevations in the UAS in the southernmost corner of the Subbasin tend to be lower than in the central Subbasin (by as much as 40 to 80 feet), regardless of climatic cycles (FCGMA 2013).

In the southeastern area of the Subbasin, groundwater elevations were −30 to −100 feet msl in 2015 (Figures 2-10 and 2-11). The hydraulic gradient, directed toward the area of low groundwater elevations, was approximately 0.002 feet/feet to the southeast in the spring of 2015. In the fall of 2015, the hydraulic gradient directed toward the area of low groundwater elevations ranged from approximately 0.004 to 0.009 feet/feet to the east-southeast. Coastal groundwater elevations were measured below or near sea level in both spring and fall of 2015, creating a presumably landward hydraulic gradient at the coast (Figures 2-10 and 2-11).

There is uncertainty associated with the groundwater elevation contours, hydraulic gradient, and groundwater flow direction in the Mugu Aquifer in the spring and fall of 2015. The gradient is unknown in the northwestern area of the Subbasin, where there are no wells screened solely within the Mugu Aquifer. Additionally, fewer wells are screened solely within the Mugu Aquifer than are producing groundwater from the Mugu Aquifer. The majority of the wells that produce groundwater in the Mugu Aquifer are screened across multiple aquifers. These wells were not used to create the contour maps, in order to conform with the DWR GSP Regulations, Section 354.14. For the central and eastern areas of the Subbasin in which there are well data in the Mugu Aquifer, the uncertainty in hydraulic gradient, flow direction, and groundwater elevation within the aquifer is particularly pronounced. In this area, groundwater appears to flow to the south-southeast from the Oxnard Subbasin to the PVB (Figures 2-10 and 2-11).

Vertical Gradients

Groundwater elevations in the Mugu Aquifer are lower than those in the overlying Oxnard Aquifer, resulting in a downward vertical gradient from the Oxnard Aquifer to the Mugu Aquifer throughout the Oxnard Subbasin (Table 2-2; Section 2.3.1.1, Oxnard Aquifer). Groundwater elevations in the Mugu Aquifer are higher than those in the underlying Hueneme Aquifer, resulting in a downward vertical gradient from the Mugu Aquifer to the Hueneme Aquifer in the Forebay and adjacent to Port Hueneme (Table 2-2). At monitoring well cluster 01N22W20M, adjacent to Port Hueneme, the downward vertical hydraulic gradient was 0.033 feet/feet in the spring of 2015 and 0.039 feet/feet in the fall of 2015. At monitoring well cluster 02N22W23B, in the Forebay, the downward vertical hydraulic gradient was 0.012 feet/feet in the spring of 2015 and 0.028 feet/feet in the fall of 2015.

Within the Mugu Aquifer, a downward vertical gradient of 0.365 feet/feet was calculated in the spring of 2015 between Wells 01N21W32Q07S and 01N21W32Q05S (Figure 2-10). In the fall of 2015, the downward vertical gradient was 0.560 feet/feet (Table 2-2; Figure 2-11).

Historical Groundwater Elevation Trends

Groundwater elevations in the Mugu Aquifer have declined and recovered over climatic cycles since the 1970s (Figure 2-12, Groundwater Well Hydrographs in the Mugu Aquifer). Management policies and the construction and operation of water conservation facilities have also impacted historical groundwater elevations (see Section 2.3.1). Full hydrographs for Oxnard Subbasin wells with five or more groundwater elevation measurements are included in Appendix D.

Groundwater elevation trends in Well 02N22W24P01S, the well with the longest historical groundwater elevation record in the Mugu Aquifer, track with the trends observed in the record of cumulative departure from the mean precipitation on the Oxnard Plain (Figure 2-12). Declines in groundwater elevation occurred between 1974 and 1977, 1984 and 1990, and 2011 and 2016, coincident with periods of drought shown in the declining limb of the cumulative departure from the mean precipitation curve (Figure 2-12). Groundwater elevations recovered after each historical drought period, but have not yet recovered from the drought beginning in 2011. The amount of historical recovery depends on the length of time between droughts and the amount of precipitation received in each of the water years between the droughts, as well as management measures, including artificial recharge and surface water deliveries, operative during the various periods. In 1996, water levels exceeded the previous maximum in 1980 (Figure 2-12), likely due to several wet years during the 1990s and the influence of management actions taken, and water conservation facilities constructed in the 1980s and 1990s (see Section 2.3.1). In the late 1990s, artesian conditions were documented in the western Oxnard Subbasin (UWCD 1999). Since 2011, groundwater elevations in this well have declined approximately 100 feet.

The patterns of water level decline and recovery observed in Well 02N22W24P01S are observed in Mugu Aquifer wells throughout the Oxnard Subbasin, although absolute changes in water level vary geographically within the Subbasin (Figure 2-12). Well 02N22W24P01S is located near the Forebay area. Other wells in the Forebay area experienced similar water level declines and recoveries to those observed in Well 02N22W24P01S (Figure 2-12). Water levels in wells adjacent to the coast and in wells farther south, however, tend to have larger intra-annual variation (variation that occurs within a single year) in groundwater level, but a smaller drought response (e.g., Wells 01N21W32Q05S and 01N21W19L11S; see Figure 2-12). The groundwater elevation in these wells declined between 20 and 80 feet between 2011 and 2015, whereas the groundwater elevation in wells in the Forebay area declined approximately 100 feet over the same period. The larger groundwater level changes observed in the northeastern Oxnard Subbasin likely reflect the influence of groundwater recharge from spreading basins in the Forebay area; additionally, groundwater level changes at the coast may be smaller due to the fact that seawater may be intruding and occupying volume within the aquifer as freshwater recedes.

Although groundwater elevations in the Oxnard Subbasin recover after each drought period, groundwater elevations in coastal Mugu-specific wells in the southern Subbasin typically remain below mean sea level. Historical elevations of coastal wells over time in relation to sea level are discussed in Section 2.3.3.

2.3.1.3 Hueneme Aquifer

Spring and Fall 2015 Groundwater Elevations

In the spring of 2015, recorded groundwater elevations in the Hueneme Aquifer in the Oxnard Subbasin ranged from −89.4 to 10.2 feet msl (Figure 2-13, Groundwater Elevation Contours in the Hueneme Aquifer, March 2–29, 2015). In the fall of 2015, groundwater elevations ranged from −115.5 to 2.1 feet msl (Figure 2-14, Groundwater Elevation Contours in the Hueneme Aquifer, October 2–29, 2015). There are fewer wells screened solely in the Hueneme Aquifer than are screened in the Oxnard Aquifer, Mugu Aquifer, or FCA in the Oxnard Subbasin. The small number of wells screened solely within the Hueneme Aquifer creates uncertainty in the groundwater elevation contours, hydraulic gradient, and groundwater flow direction (Figures 2-13 and 2-14). This aquifer is present in the northern part of the Oxnard Subbasin but is absent to the south of Etting and Hueneme Roads (Mukae and Turner 1975).

The highest groundwater elevations in the Hueneme Aquifer are found in the Forebay in both the fall and spring of 2015 (Figures 2-13 and 2-14). The hydraulic gradient in the Forebay in the spring of 2015 was approximately 0.008 feet/feet, with groundwater flowing to the southwest. In the fall of 2015 the hydraulic gradient was approximately 0.007 feet/feet, with groundwater flowing to the south-southwest.

Groundwater elevations in the Hueneme Aquifer are lowest south of the Forebay and west of Central Avenue (Figures 2-13 and 2-14). In this area, groundwater elevations were −80 to −100 feet msl in 2015 (Figures 2-13 and 2-14). This area of lower groundwater elevations coincides with the location of several production wells that are screened solely within the Hueneme Aquifer (Figure 2-6). The hydraulic gradient, directed toward the area of low groundwater elevations, ranged from approximately 0.003 feet/feet to the southeast in the spring of 2015 to approximately 0.008 feet/feet to the east-southeast in the fall of 2015. Coastal groundwater elevations were below or near sea level in both spring and fall of 2015, resulting in a landward hydraulic gradient at the coast (Figures 2-13 and 2-14).

Vertical Gradients

Groundwater elevations in the Hueneme Aquifer are lower than those in the overlying Mugu Aquifer, resulting in a downward vertical gradient from the Mugu Aquifer to the Hueneme Aquifer (Table 2-2; Section 2.3.1.2, Mugu Aquifer). Groundwater elevations in the Hueneme Aquifer were higher than those in the underlying FCA in both the spring and fall of 2015, except in the Forebay at Wells 02N22W23B03 and 02N22W23B04. In these wells, the groundwater elevation in the Hueneme Aquifer was higher than it was in the FCA in the spring of 2015, and lower than that in the FCA in the fall of 2015 (Table 2-2). In the spring of 2015, the downward vertical hydraulic gradient between the Hueneme Aquifer and FCA ranged from 0.014 feet/feet to 0.040 feet/feet. In the fall of 2015, the vertical hydraulic gradient between the Hueneme Aquifer and FCA ranged from 0.050 feet/feet downward adjacent to the coast, to 0.032 upward in the Forebay (Table 2-2).

Within the Hueneme Aquifer, a downward vertical gradient of 0.017 feet/feet was calculated for Wells 01N22W20M03S and 01N22W20M02S in the spring of 2015 (Figure 2-13). In the fall of 2015, the gradient in these wells was 0.019 feet, which is the same as it was in the spring. Farther north, in Wells 01N23W01C03S and 01N23W01C04S, the vertical gradient within the Hueneme Aquifer was similar to that calculated for Wells 01N22W20M03S and 01N22W20M02S. In the spring of 2015, the downward vertical hydraulic gradient was 0.009 feet/feet in Wells 01N23W01C03S and 01N23W01C04S. In the fall, the downward vertical hydraulic gradient was 0.010 feet/feet between Wells 01N23W01C03S and 01N23W01C04S (Table 2-2).

In Wells 02N22W23B07S and 02N22W23B08S, in the Forebay, the downward vertical gradient is greater in the upper Hueneme Aquifer than in the lower Hueneme Aquifer (Table 2-2). The gradients within the Hueneme Aquifer in the Forebay are similar to those within the Hueneme Aquifer along the coast.

Historical Groundwater Elevation Trends

Groundwater elevations in the Hueneme Aquifer have declined and recovered over climatic cycles (Figure 2-15, Groundwater Well Hydrographs in the Hueneme Aquifer). Management policies and

the construction and operation of water conservation facilities have also impacted historical groundwater elevations (see Section 2.3.1). Full hydrographs for Oxnard Subbasin wells with five or more groundwater elevation measurements are included in Appendix D.

Groundwater elevation trends in Well 02N21W31P03S, the well with the longest historical groundwater elevation record in the Hueneme Aquifer, track with the trends observed in the record of cumulative departure from the mean precipitation on the Oxnard Plain (Figure 2-15). Declines in groundwater elevation occurred between 1974 and 1977, 1984 and 1990, and 2011 and 2016, coincident with periods of drought shown in the declining limb of the cumulative departure from the mean precipitation curve (Figure 2-15). Groundwater elevations largely recovered after each historical drought period, but have not yet recovered from the drought beginning in 2011. The amount of historical recovery depends on the length of time between droughts and the amount of precipitation received in each of the water years between the droughts, as well as the management measures, including artificial recharge and surface water deliveries, operative during the various periods. Since 2011, groundwater elevations in this well have declined approximately 60 feet (Figure 2-15).

The patterns of water level decline and recovery observed in Well 02N21W31P03S are also observed in Hueneme Aquifer Wells 01N22W03F05S and 01N22W26M03S, although the magnitude of the change in groundwater levels varies between the wells (Figure 2-15). Ignoring seasonal variations reflecting pumping, the spring high elevations between 1996 and 2010 were relatively stable in Well 01N22W26M03S and declined by approximately 32 feet in Well 01N22W03F05S. Between 2011 and 2015, during a period of drought, groundwater elevations declined approximately 47 feet in Well 01N22W26M03S and approximately 55 feet in Well 01N22W03F05S (Figure 2-15).

Although groundwater elevations in the Oxnard Subbasin recover after each drought period, groundwater elevations in coastal wells can remain below mean sea level, resulting in a landward gradient near the coast.

2.3.1.4 Fox Canyon Aquifer

Spring and Fall 2015 Groundwater Elevations

In the spring of 2015, recorded groundwater elevations in the FCA in the Oxnard Subbasin ranged from −107.3 to 3.9 feet msl (Figure 2-16, Groundwater Elevation Contours in the Fox Canyon Aquifer, March 2–29, 2015). In the fall of 2015, groundwater elevations ranged from −156.3 to −24.6 feet msl (Figure 2-17, Groundwater Elevation Contours in the Fox Canyon Aquifer, October 2–29, 2015).

The highest groundwater elevations in the FCA are found in the Forebay in both the fall and spring of 2015 (Figures 2-16 and 2-17). The lowest recorded groundwater elevations are found at Well 01N21W06J05S, south of 5th Street, west of Pleasant Valley Road (Figures 2-16 and

2-17). The low groundwater elevations in this well reflects the production from the FCA at this location (Figure 2-6). However, there are several wells in the surrounding areas that produced more groundwater in 2015, but are screened across multiple aquifers in the LAS. The hydraulic gradient in the FCA was directed toward Well 01N21W06J05S in both the spring and fall of 2015. In the spring of 2015, the hydraulic gradient was approximately 0.001 to 0.002 feet/feet. In the fall of 2015, the hydraulic gradient ranged from approximately 0.002 to approximately 0.005 feet/feet. These gradients may not fully depict the direction and magnitude of flow within the FCA because more production wells are screened across multiple aquifers in the LAS than are screened solely within the FCA, and consequently production is occurring in areas of the aquifer that lack aquifer-specific groundwater elevation data. Coastal groundwater elevations were measured below or near sea level in both spring and fall of 2015, resulting in a landward hydraulic gradient (Figures 2-16 and 2-17).

Vertical Gradients

Groundwater elevations in the FCA are generally lower than those in the overlying aquifers (Figures 2-16 and 2-17; Table 2-2). In the spring of 2015, the downward vertical gradient from the Mugu Aquifer to the FCA ranged from 0.012 feet/feet in the Forebay to 0.390 feet/feet adjacent to Highway 1 (Figure 2-16; Table 2-2). In the fall of 2015, the downward vertical gradient from the Mugu Aquifer to the FCA ranged from 0.620 feet/feet in the Forebay to 0.028 feet/feet south of Hueneme Road.

In the spring of 2015, the downward vertical gradient from the Hueneme Aquifer to the FCA was similar geographically, ranging from 0.014 feet/feet in the Forebay and along the coast north of Port Hueneme to 0.040 feet/feet adjacent to the coast at Port Hueneme (Table 2-2). In the fall of 2015, the vertical hydraulic gradient between the Hueneme Aquifer and FCA ranged from 0.050 feet/feet downward along the coast near Port Hueneme to 0.032 feet/feet upward in the Forebay (Table 2-2).

Within the FCA, a downward vertical gradient of 0.005 feet/feet was calculated for Wells 01N22W36K06S and 01N22W36K07S in the spring of 2015. The vertical hydraulic gradient in these wells, near Point Mugu, was 0.019 feet/feet downward in the fall of 2015. In the Mugu area the vertical flow to the FCA is a major mechanism for seawater intrusion. In the Forebay area, the vertical hydraulic gradient within the FCA was 0.014 feet/feet downward in the spring of 2015 and 0.022 feet/feet upward in the fall of 2015 (Table 2-2; Wells 02N21W07L04S and 02N21W07L06S).

Groundwater elevations in the FCA are higher than those in the underlying GCA, except adjacent to Port Hueneme in Wells 01N22W28G04S and 01N22W28G05S (Table 2-2).

Historical Groundwater Elevation Trends

Groundwater elevations in the FCA have declined and recovered over climatic cycles (Figure 2-18, Groundwater Well Hydrographs in the Fox Canyon Aquifer). Management policies and the construction and operation of water conservation facilities have also impacted historical groundwater elevations (see Section 2.3.1). Full hydrographs for Oxnard Subbasin wells with five or more groundwater elevation measurements are included in Appendix D.

Groundwater elevation trends in Well 01N22W26K04S, the well with the longest historical groundwater elevation record in the FCA, track with the trends observed in the record of cumulative departure from the mean precipitation on the Oxnard Plain (Figure 2-18). Declines in groundwater elevation occurred between 1974 and 1977, 1984 and 1990, and 2011 and 2016, coincident with periods of drought shown in the declining limb of the cumulative departure from the mean precipitation curve (Figure 2-18). Groundwater elevations recovered after each drought period prior to the most recent drought. Groundwater elevations have not yet recovered to pre-2011 levels.

The amount of historical recovery depends on the length of time between droughts and the amount of precipitation received in each of the water years between the droughts, as well as management measures, including artificial recharge and surface water deliveries, operative during the various periods. In 1999, water levels exceeded the previous maximum in 1983 (Figure 2-18), likely due to several wet years during the 1990s and the influence of management actions taken, and water conservation facilities constructed, in the 1980s and 1990s (see Section 2.3.1). In the late 1990s, artesian conditions were documented in the western Oxnard Subbasin (UWCD 1999).

The patterns of groundwater level decline and recovery observed in Well 01N22W26K04S are observed in FCA wells throughout the Oxnard Subbasin, although absolute changes in groundwater level vary geographically within the Oxnard Subbasin (Figure 2-18). Well 01N22W26K04S is located south of Hueneme Road. Other wells in this area experienced similar groundwater level declines and recoveries to those observed in Well 01N22W26K04S (Figure 2-18). Wells farther inland tend to have larger intra-annual variations in groundwater level (e.g., Wells 01N21W06J05S and 01N21W09C04S; see Figure 2-18). The groundwater elevation in these wells declines by 40 to 50 feet each year between the spring high and fall low groundwater levels. In contrast, Well 01N23W01C02S, adjacent to the coast, declines approximately 5 feet between the spring high and fall low groundwater level (Figures 2-16, 2-17, and 2-18). Groundwater level changes at the coast may be smaller due to the fact that seawater may be intruding and occupying volume within the aquifer as freshwater recedes.

Although groundwater elevations in the Oxnard Subbasin recover after each drought period, groundwater elevations in coastal FCA-specific wells in the southern Subbasin typically remain below mean sea level.

2.3.1.5 Grimes Canyon Aquifer

Spring and Fall 2015 Groundwater Elevations

The GCA is only found underlying the southern and eastern parts of the Oxnard Subbasin (Turner 1975). Only six wells in the Oxnard Subbasin are screened solely within the GCA. These wells are located in the southern part of the Subbasin, all located west of Revolon Slough (Figure 2-19, Groundwater Elevation Contours in the Grimes Canyon Aquifer, March 2–29, 2015). In the spring of 2015, recorded groundwater elevations in the GCA ranged from −31.3 to −75.6 feet msl (Figure 2-19). In the fall of 2015, groundwater elevations ranged from −38.6 feet msl to −114.2 feet msl (Figure 2-20, Groundwater Elevation Contours in the Grimes Canyon Aquifer, October 2–29, 2015).

Where measured, groundwater in the GCA flows to the east-northeast from the coast toward the Revolon Slough (Figures 2-19 and 2-20). In the spring of 2015, the hydraulic gradient in the vicinity of Point Mugu was approximately 0.003 feet/feet (Figure 2-19). In the fall of 2015, the hydraulic gradient was approximately 0.008 feet/feet (Figure 2-20).

There is a large degree of uncertainty associated with the groundwater elevation contours, hydraulic gradient, and groundwater flow direction in the GCA in the spring and fall of 2015 because so few wells are screened solely within the GCA. The direction of flow, as contoured by the wells that are screened within the GCA, likely reflects the LAS groundwater production south of Hueneme Road (Figure 2-6). However, no wells are screened solely within the GCA north of Hueneme Road; therefore, the groundwater elevation, hydraulic gradient, and direction of flow in the GCA is unknown for much of the Oxnard Subbasin. Coastal groundwater elevations were measured below or near sea level in both spring and fall of 2015, and consequently the hydraulic gradient was landward at the coast (Figures 2-19 and 2-20).

Vertical Gradients

Groundwater elevations in the GCA are generally lower than those in the overlying FCA, except adjacent to Port Hueneme in Wells 01N22W28G04S and 01N22W28G05S (Table 2-2). The downward vertical hydraulic gradient in the spring of 2015 ranged from 0.047 feet/feet downward at Wells 01N21W32Q04S and 01N21W32Q05S to 0.01 feet/feet upward Wells 01N22W28G04S and 01N22W28G05S (Table 2-2). Vertical hydraulic gradients were similar in the fall of 2015, ranging from 0.044 feet/feet downward to 0.019 feet/feet upward, in the same wells.

Only well cluster 01N21W32Q has two wells screened within the GCA (Wells 01N21W32Q02 and 01N21W32Q03; Figure 2-19). Within the GCA, the vertical hydraulic gradient was 0.084 feet/feet upward in both the spring and fall of 2015 (Table 2-2).

Historical Groundwater Elevation Trends

Groundwater elevations in the GCA have been measured since 1989. Similar to the water levels in the overlying FCA, the groundwater levels in the GCA recovered between 1990 and 1996 (Figure 2-21, Groundwater Well Hydrographs in the Grimes Canyon Aquifer). Between 1996 and 2010, groundwater elevations were relatively stable, with intra-annual variation of up to 80 feet per year, but with inter-annual variation (variation that occurs over a series of years) of 10 feet or less. Between 2011 and 2015 groundwater elevations in the GCA declined, coincident with a period of drought. Groundwater elevations in Wells 01N22W28G01S and 01N22W35E01S vary less than groundwater elevations in other GCA wells, potentially because they are relatively far from major centers of groundwater extraction or because they are adjacent to the coast, and the intrusion of seawater may moderate freshwater elevation changes (Figures 2-19 and 2-21).

Although groundwater elevations in the Oxnard Subbasin recover to some degree after each drought period, elevations in coastal GCA-specific wells in the southern Subbasin remain below mean sea level.

2.3.2 Estimated Change in Storage

Estimated monthly change in storage values for the Oxnard Subbasin were generated by the numerical groundwater flow model prepared by UWCD (Appendix C). Monthly data reported from the model was summed to get the annual change in storage for the period from water year 1986 to water year 2015. There are inherent uncertainties in using any numerical groundwater flow model. The uncertainty associated with the UWCD model estimates is explored in more detail in Appendix E, UWCD Model Peer Review. Model estimated change in storage for the aquifer, the UAS, and the LAS is presented below.

The annual change in storage in the semi-perched aquifer ranged from an increase of approximately 16,300 AF in water year 1995 to a decrease of approximately 11,000 AF in water year 2014. The average annual change in storage in the semi-perched aquifer was a loss of storage of approximately 410 AFY.

In the UAS, the annual change in storage ranged from an increase of approximately 63,000 AF in water year 2005 to a decrease of approximately 34,200 AF in water year 1987. The average annual change in storage in the UAS was a loss of approximately 2,800 AFY.

The LAS had a maximum annual increase in storage of approximately 7,300 AF in water year 2005 and a maximum annual decrease in storage of approximately 8,000 AF in water year 1987. The average annual change in the LAS was a loss of approximately 220 AFY.

Total average annual change in storage in the Oxnard Subbasin was a decrease in storage of approximately 3,400 AFY. For the entire Oxnard Subbasin, the annual change in storage ranged from an increase of approximately 81,000 AF in water year 2005 to a decrease of approximately 48,700 AF in water year 1987 (Figure 2-22, Oxnard Subbasin Annual Change in Storage).

The cumulative change in storage calculated by the model over the period of record, water years 1986 through 2015, is presented on Figure 2-23, Oxnard Subbasin Cumulative Change in Storage. For the semi-perched aquifer, the UAS, and the LAS, the cumulative change in storage was a loss of approximately 12,300 AF, 82,500 AF, and 6,600 AF, respectively. The total cumulative loss for the entire Oxnard Subbasin was approximately 101,400 AF (Figure 2-23). Groundwater extraction (pumping) in the FCGMA is reported on a calendar year basis, so pumping and artificial recharge in figures is per calendar year, while change in storage is per water year. Annual change in storage is not strongly correlated to groundwater pumping in the Oxnard Plain ($R^2 < 0.5$). In contrast, artificial groundwater recharge at the UWCD spreading grounds is correlated with change in storage ($R^2 > 0.8$; see Figures 2-22 and 2-23). Therefore, maintaining the ability to recharge groundwater via the UWCD spreading grounds is critical to maintaining groundwater production in the Subbasin.

The model results illustrated in Figures 2-22 and 2-23 represent the net change in groundwater storage in each of the aquifer systems in the Subbasin. These results, however, include flux of seawater into the coastal areas of the aquifer systems from offshore. The volume of seawater that intruded between 1986 and 2015 was calculated for the UAS and LAS. The volume of seawater calculated does not include coastal flux into or out of the semi-perched aquifer, as few production wells are screened solely in the semi-perched aquifer. In order to assess the change in freshwater storage in the Subbasin, the annual volume of seawater that intruded was subtracted from the annual total storage change discussed above.

In the UAS, the average annual change in freshwater storage is a loss of approximately 6,600 AFY, which is more than two times greater than the total average annual change in storage for the UAS (2,800 AFY), including seawater intrusion (Figure 2-24, Oxnard Subbasin Annual Change in Storage Without Coastal Flux). In other words, approximately 3,800 AFY of seawater intrusion occurred in the UAS between water years 1986 and 2015. The maximum annual increase in freshwater storage was approximately 61,500 AF in water year 2005 and the maximum annual decrease in freshwater storage was approximately 48,500 AF in water year 1990.

The average annual change in freshwater storage in the LAS is a loss of approximately 5,700 AFY, which is 26 times greater than the total average annual change in storage for the LAS (220 AFY), including seawater intrusion (Figure 2-24). Therefore, there was approximately 5,500 AFY of seawater intrusion into the LAS between water years 1986 and 2015. The maximum increase of freshwater in storage in the LAS was approximately 2,820 AF in water year 1998 and the maximum decrease of freshwater in storage was approximately 15,150 AF in water year 1990.

For the entire Oxnard Subbasin, there was an average decrease in freshwater storage of approximately 12,700 AFY, when coastal flux is removed, with a maximum increase in storage of approximately 74,700 AF in water year 2005 and a maximum decrease in storage of approximately 73,500 AF in water year 1990 (Figure 2-24). Cumulatively between 1986 and 2015, the loss of freshwater in storage in the UAS was approximately 197,200 AF and the loss of freshwater in storage in the LAS was approximately 170,200 AF. The cumulative change in freshwater storage for both the UAS and LAS was a loss of approximately 367,400 AF. The cumulative change in storage for the entire Oxnard Subbasin, including the semi-perched aquifer, calculated by the model over the period of record, was a loss of approximately 380,200 AF of freshwater in storage, excluding coastal flux (Figure 2-25, Oxnard Subbasin Cumulative Change in Storage Without Coastal Flux).

Estimates of model changes in storage have a level of uncertainty and are dependent on model input parameters. These parameters include groundwater pumping, artificial aquifer recharge, interbasin flows, recharge from precipitation and irrigation returns, stream leakage and groundwater discharge to streams, and inflows from the ocean. Numbers may also initially be biased due to assumptions about the initial groundwater levels used in the model, which are based on available well locations and measurements that may bias starting groundwater elevations modeled in the aquifers. These inputs were estimated using the best available data and calibrated to groundwater levels in the model to a reasonable extent (Appendix C). Changes in these input values from additional monitoring wells, the filling of data gaps, and model calibration and validation may result in changes in the modeled estimates of change in storage in the future.

2.3.3 Seawater Intrusion

Evidence of seawater intrusion in the Oxnard Subbasin was first documented in the 1930s in the vicinity of Port Hueneme and Point Mugu (DWR 1965). Since that time, the landward extent of the saline water impact front has been monitored and the causes and sources of increasing chloride concentrations have been studied. Table 2-3 lists historical seawater intrusion reports and studies on the Oxnard Subbasin.

An elevated risk of seawater intrusion has been found to exist near Port Hueneme and Point Mugu due to the near shore presence of the groundwater–seawater contact in deeply incised submarine canyons (UWCD 2016a).

Seawater intrusion has been documented in both aquifer systems, and in each primary aquifer, in the Oxnard Subbasin. Seawater preferentially intrudes the aquifers in permeable sand and gravel beds (UWCD 2016a). As a result, the eastward extent of the saline water impact front varies from north to south along the coastline and within each aquifer (UWCD 2016a). In the Oxnard Subbasin, seawater that has intruded the aquifers in the vicinity of Port Hueneme tends to flow southward toward Point Mugu even after groundwater elevations rise and the landward hydraulic gradient is reversed (UWCD 2016a). As a result, higher groundwater elevations in the aquifer do not tend to flush the seawater back out of the aquifer via the original intrusion pathway (UWCD 2016a). Consequently, impacts associated with seawater intrusion have not been eliminated during wetter-than-average climatic periods.

2.3.3.1 Causes of Saline Impacts in the Oxnard Subbasin

Under seaward groundwater gradients, groundwater in the Oxnard Subbasin generally flows south and west from the Oxnard Forebay area toward the Pacific Ocean and out to sea. When groundwater heads near the coast fall below sea level or, in confined aquifers, the sea-level-equivalent elevation according to the depth of the aquifer outcrop, the gradient reverses.[4]

In addition to seawater intrusion, low groundwater heads in confined zones in the Oxnard Subbasin can create conditions under which high-salinity waters from non-marine sources impact freshwater aquifers. These sources include connate (groundwater trapped in sedimentary rocks due their deposition) brines released during compaction of aquitards and older, higher-salinity groundwater upwelling from geologic formations deeper than the lower extent of the freshwater aquifers (Izbicki 1991, 1996; UWCD 2016a; Izbicki et al. 2005).

Thirdly, although the major aquifer units in the Oxnard Subbasin are commonly separated by low-permeability units, vertical gradients, long-screened wells, and areas of mergence between aquifers can result in vertical groundwater movement between major aquifers (UWCD 2016a). In particular, because water elevations are typically higher in the semi-perched aquifer than in the deeper confined aquifers, higher-salinity water from the semi-perched aquifer may reach confined aquifers via one or more of these mechanisms. Seawater intrusion also enters the FCA from vertical flow from the Mugu aquifer in the Mugu area.

Because zones of low groundwater head cause seawater intrusion and release of connate water from aquitards, and potentially influence non-marine brine migration into freshwater aquifers, distinguishing the source of salts in any given well is not always possible, particularly at chloride concentrations less than 500 mg/L (Izbicki 1996). In the southeastern Subbasin, near the Mugu

[4] Because seawater is approximately 1.025 times denser than freshwater (using the Ghyben-Herzberg theory [De Wiest 1998]), the elevation of confined freshwater necessary to counterbalance the pressure of the water in the sea can be several feet above sea level, and depends on the depth at which an aquifer crops out in the ocean (i.e., the deeper the outcrop, the higher the freshwater elevation necessary to counterbalance the pressure of seawater).

submarine canyon, upward migration of brines can cause chloride concentrations to increase before the saline water impact front reaches a well (Izbicki 1996). Because the chloride concentration measured in wells near the Mugu submarine canyon reflect the combined effects of brine migration and seawater intrusion, it is difficult to define the leading edge of the saline water impact front using chloride concentrations in this area (Izbicki 1996). The USGS and UWCD models included faults in the Mugu Lagoon area that limit the hydraulic connection of the LAS in the Oxnard Basin to the Pacific Ocean (Hanson et al. 2003; Appendix C).

2.3.3.2 Current Extent of Seawater Intrusion

The known extent of saline water intrusion in the UAS and LAS in 2015 generally occurred near and southeast of Port Hueneme and in the area surrounding Mugu Lagoon. As of 2015, although seawater intrusion had been reduced in the Oxnard Subbasin due to management actions and wet climatic conditions in the 1990s and 2000s, TDS and chloride concentrations as high as 49,600 and 20,700 mg/L, respectively, were found in wells inland of the southern Oxnard coast (both measured in Well 01N22W07R05S; see Appendix F, Coastal Seawater Intrusion WL vs. CL Plots, and recent water quality data in Section 2.3.4, Groundwater Quality). The extent of saline water intrusion in the Oxnard Subbasin in 2015 is shown in cross section on Figure 2-26 (Approximate 2015 North–South Saline Water Intrusion Extent) and in plan view on Figures 2-27 through 2-32 (Coastal Chloride Concentrations, Fall 2015).[5] As discussed, chloride concentrations above 500 mg/L in the area of the Mugu Lagoon can be caused by both seawater intrusion and brine migration. Although this section focuses on areas that are known to be susceptible to seawater intrusion, the precise extent of current seawater intrusion impacts is difficult to separate from the areas that are impacted by release of saline water from connate brines. Therefore, the current area of seawater intrusion is smaller than the area of high chloride concentrations shown in Figures 2-27 through 2-32.

Additionally, the inland extent of seawater intrusion varies by aquifer (see Figure 2-26). Between 1985 and 2015, UWCD groundwater model estimates suggest that approximately 1,800 AFY of groundwater flowed from the semi-perched aquifer to the Pacific Ocean. In the UAS (Oxnard and Mugu Aquifers), in years characterized by relatively high rainfall, groundwater flowed from the aquifers to the ocean in the spring, and the flow reversed in the fall; conversely, in dry years ocean water flowed into the aquifers in all seasons. On average, over the entire model period, there was approximately 3,900 AFY of seawater intrusion into the UAS in the Oxnard Subbasin. In the LAS, the direction of flow varied by aquifer. The direction of flow in the Hueneme Aquifer was primarily from the ocean to the aquifer, though there are some months in which the flow direction was seaward. In the FCA and the GCA, ocean water flowed into the aquifers in every month in the period of record. The average seawater intrusion in the LAS was approximately 5,500 AFY during the model period.

[5] Saline water is typically defined as groundwater with a TDS concentration between 10,000 and 35,000 mg/L.

2.3.3.3 Historical Progression of Seawater Intrusion

Chloride concentrations were first measured in the Oxnard Subbasin in the 1920s. Between 1920 and 1929, the chloride concentration in three wells in the UAS ranged from 40 to 81 mg/L, with the lowest chloride concentration detected at the coast near Port Hueneme (FCGMA 2007). Groundwater elevations at this time ranged from 2 to 22 feet msl (FCGMA 2007). By 1934, when groundwater elevations in the UAS declined to −2 to 9 feet msl, the chloride concentration at a coastal well near Port Hueneme was 1,346 mg/L (FCGMA 2007). This was the first evidence of a potential saline water impact front in the vicinity of Port Hueneme. Between 1935 and 1940, chloride concentrations at the coast declined again and remained below 50 mg/L from 1934 to 1949 (FCGMA 2007). By 1954, however, as groundwater elevations in the UAS had declined to as much as −35 feet msl, seawater intrusion is interpreted to have affected an approximately 1-square-mile area near Port Hueneme, where two UAS wells had chloride concentrations of 1,070 and 1,925 mg/L.

This area of seawater intrusion expanded to the north and east between 1954 and 1959, and by 1959 an additional area of seawater intrusion was identified in the UAS north and east of Point Mugu (FCGMA 2007). Chloride concentrations near Port Hueneme reached 27,350 mg/L and those near Point Mugu reached 11,475 mg/L (FCGMA 2007). As groundwater elevations remained below sea level, the two areas of seawater intrusion continued to expand through the 1960s and 1970s, with the saline water impact front eventually reaching as much as 3 miles inland near Port Hueneme by the early 1980s (Izbicki 1996; FCGMA 2007).

The implementation of management strategies and pumping allocations by the FCGMA, along with increased rainfall in the late 1970s and early 1980s, reduced the area of the UAS affected by seawater intrusion, even as groundwater elevations remained below sea level throughout much of the Subbasin (FCGMA 2007). With the completion of the Freeman Diversion, which allowed for increased aquifer recharge at the spreading basins operated by UWCD, and additional above-average rainfall years, groundwater elevations in much of the UAS rose above sea level and the area of the UAS affected by seawater intrusion decreased in the 1990s (FCGMA 2007).

At the same time that seawater intrusion in the UAS was being managed and mitigated in the 1980s and 1990s, seawater intrusion began to affect the LAS (FCGMA 2007). By 1989, chloride was detected at a concentration of 6,700 mg/L at a well near Port Hueneme (FCGMA 2007). By 1994, chloride concentrations between 1,000 and 7,000 mg/L were detected near both Port Hueneme and Point Mugu (FCGMA 2007). The area impacted by seawater intrusion remained smaller in the LAS than in the UAS throughout the 1980s and 1990s.

Between 2000 and 2013, groundwater elevations in the UAS remained above sea level and there was little change in the extent of seawater intrusion near Port Hueneme (UWCD 2016a). As

groundwater elevations dropped below sea level during the recent drought, however, chloride concentrations in UAS monitoring wells near the coast began to increase and the saline water impact front expanded eastward again (UWCD 2016a). Near the Mugu submarine canyon, the groundwater elevations in the UAS have remained below sea level and chloride concentrations in wells near the coast are close to those of seawater (UWCD 2016a). The current extent of saline water intrusion in both the UAS and the LAS is shown in Figures 2-27 through 2-32.

2.3.3.4 Relationships between Groundwater Elevation and Seawater Intrusion

The relationship between groundwater elevations and seawater intrusion, as measured by changes in chloride concentration, is complex. Since the 1950s, water levels in the Oxnard and Mugu Aquifers in coastal areas have historically fallen below sea level in response to increased production and drought cycles (Figures 2-9a and 2-12). Unlike areas farther inland, the water levels below sea level resulted in seasonal seawater intrusion during the fall irrigation season and during droughts in coastal wells in the vicinity of Point Hueneme and Point Mugu (Figure 2-33, Groundwater Flux along the Coast in the Upper Aquifer System). In contrast, as groundwater production increased in the LAS, water levels in the FCA and the GCA near the coast quickly fell below sea level and have remained there since the 1980s, even after periods of above-average precipitation (Figures 2-18 and 2-21). The UWCD model indicates continuous flux from the ocean into these aquifers since 1985 (Figure 2-34, Groundwater Flux along the Coast in the Lower Aquifer System).

Some wells located near Port Hueneme and screened in the Oxnard Aquifer and the Hueneme Aquifer have chloride concentrations that rise as groundwater elevations decline and that decline as groundwater elevations rise. This relationship is shown in Wells 01N22W20M05S and 01N22W29D03S on Figure 2-35 (Selected Historical Records of Water Elevation and Chloride Concentration). All the wells with chloride and groundwater measurements are shown on Figure 2-36 (Locations of Selected Coastal Wells with Historical Measurements of Chloride Concentration and Water Elevation). It should be noted, however, that changes in chloride concentration in groundwater lag behind changes in groundwater elevation by up to 2 years in these wells. This response suggests that by the time the chloride response to declining groundwater elevations is measured, seawater intrusion has already begun.

The relationship between chloride concentration and groundwater elevation observed in Wells 01N22W20M05S and 01N22W29D03S is not universal throughout the Subbasin. In Well 01N22W29D02S, which is located in the same well cluster as Well 01N22W29D03S and is screened deeper in the Hueneme Aquifer, the concentration of chloride increased from 1995 through 2015, independent of groundwater elevation (Figures 2-35[C] and 2-36). The long-term increase in chloride concentration observed in this well suggests that groundwater elevations, even when above sea level, are not limiting the increasing chloride concentrations. A similar trend is observed in Well 01S21W08L03S, which is screened in the GCA and is

located near Point Mugu; however, in this well groundwater elevations have remained below sea level since 1990 (Figures 2-35[D] and 2-36). One explanation is that the southern flow of groundwater along the coast from Port Hueneme discussed above may limit the ability to flush some areas of saltwater back out of Grimes Canyon.

A complete set of hydrographs for all wells from which both chloride and groundwater elevation data have been collected, showing the relationship between chloride concentration and groundwater elevation, is provided in Appendix F. A summary of the relationship between chloride concentration and groundwater elevation by region within the Oxnard Subbasin is provided below.

North Coast

In the north coastal Oxnard Plains, groundwater elevations in one nested well cluster (01N23W01C02S-05S) screened in the Oxnard Aquifer, the Hueneme Aquifer, and the FCA, were below sea level in the early 1990s, generally remained above or near sea level between the mid-1990s and early 2010s, and dropped below sea level between 2013 and 2015 (Appendix F). In spite of the low groundwater elevations in the historical record, the chloride concentration in the four nested wells 01N23W01C02S–01N23W01C05S (Figure 2-36) has not exceeded 55 mg/L since the wells were completed in 1990 (Appendix F). Additionally, recent chloride concentrations in both the UAS and the LAS are typically below 100 mg/L (see Section 2.3.4). The aquifers of the Oxnard Subbasin are believed to crop out on the ocean floor where direct documentation of seawater intrusion cannot be measured.

Port Hueneme

In the vicinity of Port Hueneme, groundwater elevations in confined aquifers were below sea level in the early 1990s, recovered to elevations above sea level, remained there for two decades, and dropped below sea level between 2011 and 2014 after the onset of the recent drought. Records from nested wells 01N22W20M01 through 01N22W20M06 (which are screened in the semi-perched aquifer, the Oxnard Aquifer, the Mugu Aquifer, two zones in the Hueneme Aquifer, and the FCA; see Figure 2-36 and Appendix F) underscore the variability in the relationships between groundwater elevation and seawater intrusion in different water-bearing units. Despite the similarity in the five profiles of groundwater elevation over time, seawater preferentially intruded the Oxnard Aquifer in the past, and rising concentrations of chloride are observed in the Oxnard Aquifer, the Hueneme Aquifer, and the FCA in response to the recent decline in groundwater elevations. In this area, offshore outcrops of the older alluvium and the San Pedro Formation occur in the Hueneme submarine canyon. These outcrops provide a direct link between the Pacific Ocean and the freshwater aquifers of the Oxnard Subbasin. This region is susceptible to seawater intrusion, as demonstrated by chloride concentrations and groundwater elevations since the 1950s.

South Coast

In general, groundwater elevations in the Mugu Aquifer, FCA, and GCA in the South Coast Region have remained near or below sea level since the early 1990s (Figure 2-36 and Appendix F). Elevations in the Hueneme and Oxnard Aquifers largely remained above sea level between the mid-1990s and early 2010s. Within the upper Oxnard Aquifer, chloride concentrations have been decreasing, while rising chloride concentrations have been measured in the lower Oxnard Aquifer. In this area, elevated chloride concentrations in the Oxnard Aquifer likely result from southward migration of seawater that intruded the aquifer in the vicinity of Port Hueneme during earlier periods of low groundwater elevations (UWCD 2016a). This region does not typically experience direct seawater intrusion via offshore outcrops, but rather rising chloride concentrations indicate previous episodes of seawater intrusion via the Hueneme Canyon to the north.

Point Mugu

In all but one case, groundwater elevations in the vicinity of Mugu Lagoon have remained below sea level since the 1990s. Chloride concentrations exceeding 1,000 mg/L are measured in the majority of monitoring wells in this region (Figure 2-36; Appendix F). However, as noted above, some of the elevated chloride concentrations in this area are from the upwelling of connate water and the migration of groundwater to the LAS from the UAS.

2.3.4 Groundwater Quality

FCGMA adopted Basin Management Objectives (BMOs) for nitrate, chloride, and TDS in the Oxnard Subbasin for its 2007 Groundwater Management Plan Update (FCGMA 2007; Table 2-4). Additionally, the Water Quality Control Plan: Los Angeles Region (Basin Plan) specifies Water Quality Objectives (WQOs) for TDS, chloride, nitrate, sulfate (SO_4), boron, and nitrogen (mg/L nitrate) (LARWQCB 2013; Table 2-4). The current and historical distribution of these five constituents are discussed below. There are too few measurements of water quality in wells screened solely within a single aquifer to allow for meaningful discussion of water quality by aquifer. Additionally, as discussed in Section 2.3.1, the majority of the groundwater production in the Oxnard Subbasin occurs in wells that are screened across multiple aquifers. This production has the potential to impact water quality in multiple aquifers simultaneously. Therefore, impacts to groundwater quality in the Oxnard Subbasin are considered based on aquifer system.

Groundwater quality monitoring within the Oxnard Subbasin occurs on different schedules for different wells. In order to assess the current groundwater quality conditions within the Oxnard Subbasin, the most recent concentration of each of the five constituents listed above was mapped for samples collected between 2011 and 2015. Historical groundwater quality hydrographs are presented in Appendix G, Water Quality Hydrographs. Statistics on the most recent sample date, the maximum and minimum concentrations measured, the number of times sampled, and the

number of samples whose concentration exceeded the relevant water quality threshold are presented in Appendix H, FCGMA Water Quality Statistics.

2.3.4.1 Total Dissolved Solids

Sources of high TDS water in the Oxnard Subbasin include seawater and brines migrating via faults or upwelling from older geologic formations (see Section 2.3.3). Additionally, in the UAS, improperly abandoned wells in the semi-perched aquifer and high chloride brines in fine-grained lagoonal deposits in the Oxnard and Mugu Aquifers, can contribute to high concentrations of TDS in the groundwater (Izbicki 1996). The water quality objective for TDS is 1,200 mg/L in the Forebay and confined aquifers, and 3,000 mg/L in the unconfined aquifers (LARWQCB 2013). The 2007 FCGMA BMO for TDS is 1,200 mg/L for the Forebay (FCGMA 2007). UAS wells with concentrations of TDS greater than 1,200 mg/L are found throughout the Oxnard Subbasin.

Upper Aquifer System

Concentration of TDS in groundwater in the UAS ranged from 652 mg/L to 49,600 mg/L between 2011 and 2015 (Figure 2-37a, Upper Aquifer System – Most Recent Total Dissolved Solids [mg/L] Measured 2011–2015, and Figure 2-37b, Upper Aquifer System, Forebay Area – Most Recent Total Dissolved Solids [mg/L] Measured 2011–2015). Water with TDS concentrations greater than 35,000 mg/L is considered brine. Both the highest and lowest concentrations of TDS were measured adjacent to the coast in Wells 01N22W27R05S and 01N22W27C02S, respectively (Figure 2-37a). The highest concentrations of TDS are found in coastal wells in areas known to be impacted by seawater intrusion (e.g., Well 01S21W08L04S) and release of connate brines from clay layers (e.g., Well 01N22W27R05S). The concentration of TDS in Well 01N22W27R05S has been increasing since 2013, while the concentration of TDS in Well 01S21W08L04S has remained stable over the last 5 years.

In the Forebay, Wells 02N22W23B02S and 02N22W23C05S have been used as BMO wells for TDS. In 2015, the concentration of TDS measured in a sample collected from Well 02N22W23B02S was 1,230 mg/L, and the concentration of TDS measured in a sample collected from Well 02N22W23C05S was 1,070 mg/L. The concentration of TDS in each of these wells has been increasing over the past 5 years (FCGMA 2016).

Lower Aquifer System

In general, TDS concentrations in the LAS are higher in the southern Oxnard Subbasin than in the northern part of the Subbasin (Figure 2-38, Lower Aquifer System – Most Recent Total Dissolved Solids [mg/L] Measured 2011–2015). Concentration of TDS in groundwater in the LAS ranged from 392 mg/L to 37,200 mg/L between 2011 and 2015 (Figure 2-38). The highest concentration was measured in Well 01N21W32Q03S, which is in the southern Oxnard Subbasin, inland from

the coast, and is screened within the GCA (Figure 2-38). The higher concentration of TDS in this area likely resulted from upward migration of brines in deeper formations. This migration may have been induced or exacerbated by lowered groundwater elevations from groundwater production in the LAS, although the concentration of TDS in this well has increased steadily since 1995, even during periods when groundwater elevations were 40 to 100 feet higher than they were in 2015 (Izbicki 1991; Izbicki et al. 2005; UWCD 2016a).

The lowest concentration of TDS was measured in Well 01N22W35E03S, screened in the FCA south of Port Hueneme (Figure 2-38). The concentration of TDS in this well was 392 mg/L in 2015. TDS concentrations in this well have remained relatively stable over the last 5 years, neither increasing nor decreasing with the onset of the 2011 drought.

2.3.4.2 Chloride

Sources of water high in chloride in the Oxnard Subbasin include modern seawater, groundwater from the semi-perched aquifer, connate water from fine-grained lagoonal deposits in the Oxnard and Mugu formations, and brines migrating via faults or upwelling from older geologic formations (see Section 2.3.3). The UAS has a long history of seawater intrusion, with groundwater elevations below sea level measured as early as the 1930s (see Section 2.3.3; UWCD 2016a). Seawater intrusion affects a smaller area of the LAS than the UAS, and is more pronounced near Point Mugu than near Port Hueneme (UWCD 2016a). Brine migration along faults and from deeper geologic formations also affects the chloride concentration in the LAS (Izbicki 1991).

The water quality objective for chloride is 150 mg/L in the Forebay and confined aquifers, and 500 mg/L in the unconfined aquifers (LARWQCB 2013). The BMO for chloride is 150 mg/L for the UAS and LAS.

Upper Aquifer System

Concentration of chloride in groundwater in the UAS ranged from 23 mg/L to 20,700 mg/L between 2011 and 2015 (Figure 2-39a, Upper Aquifer System – Most Recent Chloride [mg/L] Measured 2011–2015, and Figure 2-39b, Upper Aquifer System, Forebay Area – Most Recent Chloride [mg/L] Measured 2011–2015). Chloride concentrations in the UAS are higher near the coast, from Point Hueneme south to Point Mugu, than inland or north of Port Hueneme (Figure 2-39a). The lowest concentration of chloride was measured in Well 01N22W11C02S in the central Oxnard Subbasin (Figure 2-39a). This well was only sampled one other time, in 1952, and the concentration of chloride measured at that time was 83 mg/L. Between 2011 and 2015, the concentration of chloride was less than 150 mg/L in the Forebay (Figure 2-39b).

The highest concentration of chloride (20,700 mg/L) was measured in Well 01N22W27R05S, adjacent to the coast south of Port Hueneme (Figure 2-39a). Groundwater from this well also had

the highest concentration of TDS. The concentration of chloride in this well has been increasing since 2013. The concentration of chloride in Well 01S21W08L04S, a BMO well near Point Mugu, was 17,500 mg/L in 2015. The concentration of chloride in this well has been stable over the last 5 years (FCGMA 2016). Of the nine BMO wells with chloride concentration objectives in the UAS, three have had increasing chloride concentrations over the past 5 years (Wells 01N22W20J07S, 01N22W20J08S, and 01S22W01H03S), although all of the BMO wells have had water levels below their targets as a result of the drought.

Lower Aquifer System

In general, chloride concentrations in the LAS are higher in the southern Oxnard Subbasin than they are elsewhere in the Oxnard Subbasin (Figure 2-40, Lower Aquifer System – Most Recent Chloride [mg/L] Measured 2011–2015). In the Forebay, the concentration of chloride in groundwater is less than 100 mg/L, while concentrations of chloride south of Port Hueneme exceed 500 mg/L (Figure 2-40).

Concentration of chloride in groundwater in the LAS ranged from 33 mg/L to 14,300 mg/L between 2011 and 2015 (Figure 2-40). The lowest concentration of chloride was measured in Well 01N23W01C02S on the coast, north of Port Hueneme (Figure 2-40). The concentration of chloride in this well has remained stable since it was first measured in 1990.

The highest concentration of chloride was measured in Well 01N21W32Q03S, in the southern Oxnard Subbasin (Figure 2-40). In this well, the concentration of chloride has increased since it was first measured in 1991. At that time the concentration of chloride in the well was 340 mg/L. BMO Well 01S21W08L03S is also located in the southern Oxnard Subbasin, in the vicinity of Point Mugu. This is the only BMO well in the LAS that has had increasing concentrations of chloride over the past 5 years despite all of the BMO wells having water levels below their targets (FCGMA 2016).

2.3.4.3 Nitrate

Nitrate concentrations above WQOs and BMOs are present in the Forebay of the Oxnard Subbasin (UWCD 2008). These concentrations are likely a legacy of historical septic discharges and agricultural fertilizer application practices.[6] Historical discharges have resulted in concentrations that impact beneficial uses and users of the Oxnard Subbasin. In particular, not all municipal users of groundwater in this area have the ability to blend groundwater with nitrate exceeding the federal maximum contaminant level for nitrate as NO_3 of 45 mg/L.

[6] Ventura County extended sewer lines into this area in the years between 2000 and 2011 to address additional discharges of nitrate.

Historical nitrate concentrations in the Forebay are most impacted by the quantity of surface water available for spreading from the Santa Clara River. The river water has lower concentrations of nitrate than the groundwater. Therefore, during periods when Santa Clara River water is used to recharge the Subbasin, groundwater concentrations of nitrate decrease. Conversely, during periods of drought, groundwater concentrations of nitrate in the Forebay tend to increase.

The BMO for nitrate is 22.5 mg/L in the Forebay (FCGMA 2007). The WQO for nitrate as NO_3 is 45 mg/L for the entire Oxnard Subbasin (LARWQCB 2013).

Upper Aquifer System

Between 2011 and 2015, concentrations of nitrate as NO_3 in groundwater in the UAS ranged from below the detection limit to 240 mg/L (Figure 2-41a, Upper Aquifer System – Most Recent Nitrate [mg/L as Nitrate] Measured 2011–2015, and Figure 2-37B). The highest concentration was measured in Well 02N22W26C01S in the Forebay (Figure 2-41b, Upper Aquifer System, Forebay Area – Most Recent Nitrate [mg/L as Nitrate] Measured 2011–2015). However, the concentration of nitrate measured in a sample collected from the same well in 2011 was only 4.9 mg/L. Similarly, nitrate concentrations in Wells 02N22W23B02 and 02N33W23C05S, which are both BMO wells, increased between 2011 and 2016. The concentration of nitrate in Well 02N22W23B02 was 4.1 mg/L in 2011 and was as high as 127 mg/L in 2015. The concentration of nitrate in Well 02N22W23C05 was 2.8 mg/L in 2011 and was as high as 31.9 mg/L in 2015.

Outside of the Forebay, the concentration of nitrate in the groundwater decreases rapidly and is not correlated with recharge from the spreading basins. In general, nitrate as NO_3 concentrations are highest in the southern Forebay and northeastern Oxnard Subbasin. The lowest concentrations are found in the southern Oxnard Subbasin, with the concentration of nitrate below the detection limit in the majority of the wells in the southern Subbasin (Figure 2-41a).

Lower Aquifer System

Concentrations of nitrate as NO_3 in groundwater in the LAS are lower than they are in the UAS. Between 2011 and 2015, the concentration of nitrate as NO_3 in wells screened in the LAS ranged from below the detection limit to 57 mg/L. The highest concentration was measured in Well 02N21W19A03S, in the northeastern Oxnard Subbasin. The concentration of nitrate in this well may be influenced by downward migration of water and is not representative of general nitrate concentrations within the LAS. The next-highest concentration of nitrate was measured in Well 01N22W23R02. The concentration of nitrate in the well was 22.1 mg/L (Figure 2-42, Lower Aquifer System – Most Recent Nitrate [mg/L as Nitrate] Measured 2011–2015). The majority of the wells in the LAS have nitrate as NO_3 concentrations below the detection limit. In the Forebay, the concentration of nitrate as NO_3 is lower in the LAS than it is in the UAS (Figures 2-41b and 2-42).

2.3.4.4 Sulfate

Sources of sulfate in the Oxnard Subbasin include mineral dissolution in groundwater and seawater intrusion. The majority of the wells in the Oxnard Subbasin have sulfate concentrations below 600 mg/L. Similar to nitrate, wells in the Forebay tend to have higher concentrations of sulfate than wells farther south, with the notable exception of Wells 01N22W27R05S and 01S21W08L04S (Figure 2-43a, Upper Aquifer System – Most Recent Sulfate [mg/L] Measured 2011–2015). The water quality objective for sulfate is 600 mg/L in the Forebay and confined aquifers, and 1,000 mg/L in the unconfined aquifers (LARWQCB 2013).

Upper Aquifer System

Concentrations of sulfate in the UAS ranged from 100 mg/L to 5,740 mg/L between 2011 and 2015 (Figure 2-43a and Figure 2-43b, Upper Aquifer System, Forebay Area – Most Recent Sulfate [mg/L] Measured 2011–2015). High concentrations of sulfate near the coast are generally indicative of seawater intrusion. The highest concentration was measured in Well 01N22W27R05S, which also had the highest concentration of chloride and TDS. The concentrations of each of these constituents has increased since 2013. The lowest concentration was measured in Well 01N22W36K09S in the southern Oxnard Subbasin.

Lower Aquifer System

Concentrations of sulfate in the LAS ranged from below the detection limit to 2,030 mg/L between 2011 and 2015 (Figure 2-44, Lower Aquifer System – Most Recent Sulfate [mg/L] Measured 2011–2015). High concentrations of sulfate near the coast are generally indicative of seawater intrusion. The highest concentration was measured in Well 01N21W32Q03S, which also had the highest concentration of chloride and TDS. Only four wells in the LAS had concentrations of sulfate that exceeded 600 mg/L. These wells are distributed throughout the Oxnard Subbasin and do not follow a clear geographic pattern. Similar to nitrate, LAS wells in the Forebay have lower concentrations of sulfate than UAS wells in the Forebay (Figure 2-44).

2.3.4.5 Boron

Sources of boron in the Oxnard Subbasin include seawater intrusion in coastal areas and release of anthropogenic (introduced by human activities) boron from past septic tank uses. The WQO for boron in the Oxnard Subbasin is 1 mg/L (LARWQCB 2013).

Upper Aquifer System

Concentrations of boron in the UAS ranged from 0.05 mg/L to 5.9 mg/L between 2011 and 2015 (Figure 2-45a, Upper Aquifer System – Most Recent Boron [mg/L] Measured 2011–2015, and

Figure 2-45b, Upper Aquifer System, Forebay Area – Most Recent Boron [mg/L] Measured 2011–2015). The highest concentration was measured in Well 01N22W27R05S, which also had the highest concentrations of sulfate, chloride, and TDS. The lowest concentration was measured in Well 02N22W24A01S, in the northeastern Oxnard Subbasin (Figure 2-45a). Only seven wells in the UAS had boron concentrations greater than 1 mg/L between 2011 and 2015.

Lower Aquifer System

Concentrations of boron in the LAS ranged from 0.3 mg/L to 2.2 mg/L between 2011 and 2015 (Figure 2-46, Lower Aquifer System – Most Recent Boron [mg/L] Measured 2011–2015). The highest concentration was measured in Well 01N21W32Q03S, which also had the highest concentrations of sulfate, chloride, and TDS. Only five wells in the LAS had boron concentrations greater than 1 mg/L between 2011 and 2015.

2.3.4.6 Map of Oil and Gas Deposits

In the database maintained by the County of Ventura (2016), five oil fields entirely or partially fall within the Oxnard Subbasin: Montalvo, W.; Oxnard; El Rio; Santa Clara Avenue; and Saticoy (Figure 2-47, Oil Fields in the Vicinity of FCGMA Groundwater Basins). Petroleum extraction in the FCGMA basins occurs below the deepest freshwater aquifer (Hopkins 2013). While no evidence of impacts of petroleum extraction on beneficial use of groundwater in the FCGMA basins has been identified, there are limited available data. Few wells exist in deep aquifers near oil fields that could be monitored for potential impact. However, trace amounts of organic compounds have been found in deeper wells in southeastern Pleasant Valley (Izbicki et al. 2005), and there have been anecdotal reports of trace petroleum hydrocarbons observed in irrigation wells near some oil fields.

2.3.4.7 Maps of Locations of Impacted Surface Water, Soil, and Groundwater

Impacted surface water, soil, and groundwater have been documented in the Oxnard Subbasin, although these impairments tend to be limited to the semi-perched aquifer. This uppermost unit in the Oxnard Subbasin is underlain by a clay cap layer that limits the vertical migration of impaired water to the underlying UAS.

Impaired surface waters (i.e., 303(d) Listed Reaches) that overlie the Oxnard Subbasin include approximately 3 miles of the Santa Clara River, the Revolon Slough, Calleguas Creek, and a number of lined drains serving agricultural areas south of the City of Oxnard (Figure 2-48, Impaired Surface Waters in the Vicinity of FCGMA Groundwater Basins; SWRCB 2004). The names of the reaches used by the State Water Resources Control Board, and the impairments listed for each, are included in tabulated form in Appendix I, Oxnard 303(d) List Reaches.

Locations of impacted soil and groundwater were assessed on a basin-wide scale by reviewing information available on the SWRCB GeoTracker website and the California Department of Toxic Substances Control EnviroStor website. Cases that were closed by the supervisory agency were not considered.

Of the 290 open cases located within the boundaries of the Oxnard Subbasin and Pleasant Valley, groundwater was impacted in 77. Dudek reviewed and catalogued the constituents of concern (COCs) present on site in these 77 cases (Figure 2-49, Constituents of Concern at Open GeoTracker Cases with Impacted Groundwater within FCGMA Groundwater Basin Boundaries). Case details are included in Appendix J, GeoTracker Open Sites.

Of the 71 open cases in the Oxnard Plain in which groundwater is, or is potentially, impacted, the following COCs were identified as present at the following number of sites (Figure 2-49; Appendix J):

- Chlorinated volatile organic compounds (VOCs), including COCs marked as *solvents*, *VOCs*, and *chlorinated hydrocarbons*, were present at 34 sites.
- Gasoline and diesel, including COCs marked *TPH* and *petroleum*, were present at 32 sites.
- Metals were present at 27 sites.
- Polychlorinated biphenyls (PCBs) were present at 23 sites.
- Benzene, toluene, ethylbenzene, and/or xylenes (BTEX) were present at 18 sites.
- Pesticides were present at 12 sites.
- Methyl tert-butyl ethylene (MTBE) and/or tert-butyl alcohol (TBA) were present at seven sites.
- Two sites listed other COCs.

Many of these sites are located on land administered by the U.S. military (Figure 2-49). Outside of military bases, these sites tend to occur within the city limits of the Cities of Oxnard, Port Hueneme, and Camarillo.

The risk that contamination in the shallow groundwater of the Oxnard Subbasin would reach the UAS is somewhat mitigated by the presence of a confining layer that separates the semi-perched aquifer from the water-bearing units of the UAS throughout much of the Oxnard Plain (Turner and Mukae 1975). However, the vertical gradient is directed downward from the semi-perched aquifer to the underlying Oxnard Aquifer, indicating the potential for groundwater movement from the semi-perched aquifer to the Oxnard Aquifer.

Based on a review of open GeoTracker and EnviroStor cases with impacted groundwater, it does not appear that existing groundwater contamination in the semi-perched aquifer poses a substantial threat to beneficial use of groundwater in the UAS and the LAS. Based on a review of the files

available on GeoTracker for each of the cases in the Oxnard Subbasin that fell outside the bounds of a military base, it appears that in none of the cases were any liable parties required to investigate deeper than 50 feet below ground surface (bgs), indicating that impacts to groundwater in the UAS were not a concern for regulatory agencies.

2.3.5 Subsidence

Inelastic, or irrecoverable, land subsidence (subsidence) can be a concern in areas of active groundwater extraction, including the Oxnard Subbasin. Active causes of land subsidence in the Oxnard Subbasin include tectonic forces, petroleum reservoir compaction, and clay compaction (Hanson et al. 2003). Significant water level declines in the FCGMA groundwater basins since the early 1900s suggest that fluid extraction, rather than tectonic activity, is the major cause of land subsidence (Hanson et al. 2003). Subsidence resulting from any of these sources can cause increased flood risk, well casing collapse, and a permanent reduction in the specific storage of the aquifer (Hanson et al. 2003).

Direct measurement of subsidence within the Oxnard Subbasin is limited. Elevation data from USGS benchmark (BM) E548 in the southern part of the Oxnard Plain indicate subsidence of about 1.6 feet (0.49 meters) during the period from 1939 to 1960, and an additional 1 foot (0.31 meters) of subsidence from 1960 to 1978 (Hanson et al. 2003). The average rate of subsidence for these two periods was similar, averaging approximately 0.07 feet (0.02 meters) per year from 1939 to 1960, and approximately 0.06 feet (0.02 meters) per year from 1960 to 1978 (Hanson et al. 2003). In contrast, elevation data from USGS BM Z901, located approximately 2.6 miles southeast of BM E548, indicate subsidence of approximately 0.3 feet (0.10 meters) between 1960 and 1978. The average rate of subsidence at BM E548 was 0.02 feet (0.01 meters) per year for this period. The rate of subsidence at BM Z901 decreased to approximately 0.01 feet per year from 1978 to 1992. Data are not available for BM E548 after 1978. The amount of subsidence measured at both BM E548 and BM Z901is the cumulative subsidence from all possible sources, including groundwater pumping, tectonic activity, and petroleum reservoir compaction.

In addition to direct measurement of subsidence in the southern part of the Oxnard Plain, potential subsidence was modeled for the entire Oxnard Plain for different future water production scenarios (Hanson et al. 2003). The scenarios included consideration of proposed water projects and ordinances for the FCGMA Basins. The model results suggest that areas within the Oxnard Plain may experience an additional 0.1 to 1 feet of subsidence by 2040 (Hanson et al. 2003). DWR classified the Subbasin as an area that has a medium to high potential for future subsidence. The amount of future subsidence will depend on whether future water levels decline below previous low levels and remain there for a considerable amount of time (Hanson et al. 2003). Maintaining water levels above the previous low water levels will limit the risk of future subsidence.

From March 2015 to June 2016, the Jet Propulsion Laboratory (JPL) analyzed interferometric synthetic aperture radar (InSAR) data from the European Space Agency's satellite-borne Sentinel-1A and NASA's airborne UAVSAR, along with similar previous studies from 2006 to 2015, to examine subsidence in areas of California. The study included the south-central coast of California in Ventura and Oxnard (Farr et al. 2017). The map generated from this study for this area of the south-central coast of California (Farr et al. 2017, Figure 23) showed less than 1 foot of subsidence for the Oxnard Subbasin.

2.3.6 Groundwater–Surface Water Connections

The Santa Clara River, Calleguas Creek, Revolon Slough, Mugu Lagoon, Ormond Beach, and McGrath Lake have all been identified as surface water bodies that may have a connection to the semi-perched aquifer in the Oxnard Subbasin (see Section 2.3.7, Groundwater-Dependent Ecosystems). However, groundwater elevation data for the semi-perched aquifer in the Oxnard Subbasin are extremely limited, with no monitoring sites near enough to surface water bodies to establish the extent of the connection between these surface water bodies and underlying groundwater (Figure 2-50, Groundwater Elevation Contours in the Semi-Perched Aquifer, March 2–29, 2015, and Figure 2-51, Groundwater Elevation Contours in the Semi-Perched Aquifer, October 2–29, 2015).The spatial extents of gaining, losing, and dry reaches in the Santa Clara River are seasonally variable (UWCD 2014, 2018).

The best available estimates for groundwater–surface water connections comes from the UWCD numerical model, which simulates the leakage from major surface water bodies in the Oxnard Subbasin using data from stream gauges and estimated aquifer properties (Appendix C). The UWCD model reports stream leakage from the Santa Clara River and Calleguas Creek into the underlying semi-perched aquifer. Numbers from the model represent net stream leakage and do not necessarily indicate direct connection between surface water bodies and groundwater in the semi-perched aquifer.

The UWCD model calculated stream percolation for water years from 1986 to 2015 (Table 2-5). The Santa Clara River had net recharge to groundwater in 26 of 30 water years, with an average net recharge to groundwater of approximately 5,700 AFY. The recharge to groundwater primarily occurs in the vicinity of the Forebay, where Santa Clara River water percolates into the UAS. Downstream of the Forebay, some reaches of the Santa Clara River are typically gaining in most years, generally from the semi-perched aquifer. Net groundwater discharge to the Santa Clara River was identified as occurring during 1999, 2002, 2006, and 2013. Calleguas Creek exhibited net recharge to groundwater in all years modeled, with an average net recharge to groundwater of approximately 3,450 AFY.

2.3.7 Groundwater-Dependent Ecosystems

Six potential GDE units, defined by dominant surface hydrologic features, were identified in the Oxnard Subbasin (Appendix C, UWCD Model Report; TNC 2017 [see Appendix K of this GSP]; Figure 2-52, Groundwater-Dependent Ecosystems for the Oxnard Subbasin). The potential GDE units were identified using the statewide potential GDE map (Appendix K). Of the six potential GDE units identified, the Lower Santa Clara River, McGrath Lake, Ormond Beach, and Mugu Lagoon units were validated using groundwater elevations measured in wells within or adjacent to the unit to confirm the potential hydrologic connection to groundwater in the semi-perched aquifer, as described in The Nature Conservancy's GDE Guidance Framework (Appendix K). Insufficient well data are available to confirm the depth to groundwater in the Revolon Slough unit or the Lower Calleguas Creek unit. Therefore, in the discussion below, these units remain as potential GDEs. Groundwater elevation in the vicinity of these units will be required in order to confirm whether or not the habitat is supported by groundwater (see Section 4.6.5, Shallow Groundwater Monitoring near Surface Water Bodies and GDEs).

Lower Santa Clara River GDE

The lower Santa Clara River GDE (located downstream of Highway 101 and upstream of the estuary) comprises approximately 750 acres of aquatic habitat, in-channel wetland, and a range of willow–cottonwood riparian forest (Figure 2-53, Lower Santa Clara River Groundwater-Dependent Ecosystems; Appendix K, The Nature Conservancy GDE Tech Memo). The GDE is located in the floodplain of the lower Santa Clara River, which undergoes substantial transformations in vegetation composition and distribution due to the dynamic nature of the river flows during winter. The lower Santa Clara River GDE supports habitat for several state- and federally listed species (Table 2-6).

Flow in the lower Santa Clara River downstream of Highway 101 has historically been perennial (SFEI 2011; City of Ventura 2016). The source of the perennial flow in this region is groundwater from the semi-perched aquifer, which is separated from the underlying UAS by a clay cap that limits groundwater migration and allows differences in groundwater elevation between the semi-perched aquifer and the Oxnard Aquifer. In the spring of 2015, groundwater elevations in the Oxnard Aquifer were below sea level (Figure 2-7).

Groundwater from the semi-perched aquifer provides the dry summer baseflow, if it exists, and a quarter of the winter flow (City of Ventura 2011). Groundwater flow direction between the semi-perched aquifer and the lower Santa Clara River, its estuary, and nearby McGrath Lake, depends on tidal conditions, river stage, and recharge rates due to agricultural irrigation (City of Ventura 2016). Groundwater levels from wells in the vicinity of the lower Santa Clara River GDE generally range between 7 and 11 feet bgs (Figure 2-53). The groundwater depths are within the range

considered necessary for juvenile establishment (<10 feet) and mature vegetation growth (<20 feet) (City of Ventura 2016).

McGrath Lake GDE

The McGrath Lake GDE includes a coastal freshwater back-dune lake, arroyo willow riparian forest, freshwater emergent marsh, and saline emergent marsh (Figure 2-54, McGrath Lake Groundwater-Dependent Ecosystems). The McGrath Lake GDE supports critical habitat for several state- and federally listed endangered species as well as many special-status bird species (Table 2-6).

McGrath Lake is formed by shallow groundwater that remains perched above a clay layer in the semi-perched aquifer (ESA 2003). McGrath Lake operational water surface elevations are maintained between 2.7 and 3.6 feet msl (City of Ventura 2011). Groundwater flows toward the Santa Clara River during open-mouth conditions and towards McGrath Lake when the Santa Clara River Estuary fills following mouth closure (City of Ventura 2011). As measured since 2009, depths to groundwater around the McGrath Lake GDE range from ground surface to 10 feet bgs, depending on the well (Appendix K).

Ormond Beach GDE

The Ormond Beach GDE, which includes isolated patches of southern coastal salt marsh and coastal freshwater/brackish marsh that have been drained, filled, and degraded by past industrial and agricultural use, is part of a larger 1,500-acre coastal dune–marsh system of dunes, lakes, lagoons, and saltwater and freshwater marshes (WRA 2007; CCC 2017; Figure 2-55, Ormond Beach Groundwater-Dependent Ecosystems). The Ormond Beach GDE supports habitat for state- and federally listed species as well as 27 special-status plant species and 42 special-status wildlife species (Table 2-6).

The Ormond Beach GDE is hydrologically connected to the semi-perched aquifer. Shallow groundwater elevations are influenced by rainfall, tidal events, and the surface water elevations of the agricultural drains and flood control channels. Depth to groundwater ranges from ground surface to 15 feet bgs (Appendix K).

Mugu Lagoon GDE

Mugu Lagoon GDE is the largest salt marsh estuary in Southern California (USFWS 2016a). The GDE provides habitat for several state- and federally listed species (Table 2-6; Figure 2-56, Mugu Lagoon Groundwater-Dependent Ecosystems).

The estimated groundwater depth in the Mugu Lagoon GDE varies between ground surface and 6 feet bgs (Appendix K). Estimated depths to groundwater in the GDE, are based on interpolation of water elevation data from representative wells at Naval Base Ventura County Point Mugu to reference point locations within the Mugu Lagoon GDE. Mugu Lagoon receives groundwater discharge from the semi-perched aquifer along with freshwater from Calleguas Creek, the drainage ditches, primarily Oxnard Drainage Ditch No. 2, and salt water from tidal fluctuations.

Lower Calleguas Creek Potential GDE

The lower Calleguas Creek potential GDE includes aquatic habitat and mulefat and willow riparian forest. This potential GDE may support native special-status species (Table 2-6).

The Lower Calleguas Creek potential GDE overlies the semi-perched aquifer. The channel has been separated from the adjacent floodplain since the 1960s by a riprap and earthen levee countersunk about 3 feet below the surrounding grade. Thus, Calleguas Creek is a losing reach in the Oxnard Plain. Lower Calleguas Creek maintains a perennial streamflow due to a combination of wastewater effluent and pumped tile drain discharge from adjacent agricultural fields, with the addition of natural precipitation and stormwater runoff during winter months. The degree of groundwater recharge and/or discharge has not been studied and groundwater elevation data are not available for this area. Groundwater elevations at semi-perched aquifer monitoring wells (located approximately 1 mile to the southwest at Naval Base Ventura County Point Mugu) indicate typical groundwater elevations range from −1 to 6 feet msl. Extrapolated depths to groundwater at the downstream end of the Calleguas Creek GDE, at approximately 12 feet msl, are between 6 to 13 feet bgs. The extrapolated groundwater depths indicate the potential for the riparian vegetation to access shallow groundwater. Additional data need to be collected within the boundaries of the Calleguas Creek potential GDE in order to determine whether or not the riparian vegetation is accessing shallow groundwater.

Revolon Slough Potential GDE

The Revolon Slough potential GDE comprises aquatic habitat and willow riparian forest. This potential GDE may support native special-status species (Table 2-6). The riparian habitat within this potential GDE is considered “de minimis” because of its poor quality and limited extent adjacent to the waterway. Streamflow in lower Revolon Slough is considered to be a combination of agricultural return flow and precipitation and stormwater runoff. The degree of groundwater recharge and/or discharge has not been studied and groundwater elevation data are not available for this area. Groundwater elevations at semi-perched aquifer monitoring wells located approximately 1 mile to the southwest at Naval Base Ventura County Point Mugu indicate typical groundwater elevations range from −1 to 6 feet msl. Extrapolated depths to groundwater at the downstream end of the Revolon Slough potential GDE would be between 9 and 16 feet bgs. The extrapolated groundwater

depths indicate the potential for the riparian vegetation to access shallow groundwater. Additional data need to be collected within the boundaries of the Revolon Slough potential GDE in order to determine whether or not the riparian vegetation is accessing shallow groundwater.

2.3.8 Potential Recharge Areas

To evaluate potential future recharge areas within the Oxnard Subbasin, soil types were obtained from the Web Soil Survey, available online at https://websoilsurvey.nrcs.usda.gov/ (USDA 2019). Soil Ksat rates (saturated hydraulic conductivity rates) for soils of 92 micrometers per second or greater were plotted. Figure 2-57, Oxnard Potential Recharge Areas, shows the results of this evaluation and areas with the most favorable soil recharge rates. The most favorable areas are near the current UWCD spreading grounds, along the Santa Clara River, in sands along the northern coastal areas, and in loamy sands, which may represent old Santa Clara River drainages.

2.4 WATER BUDGET

This section presents the current, historical, and simulated future water budget analysis for the Oxnard Subbasin. This water budget analysis has been completed in accordance with the DWR GSP Regulations. The historical water budget has been prepared for the 31-year period from the beginning of calendar year 1985 through 2015 (the current year for the Sustainable Groundwater Management Act [SGMA]) and is described in units of AF or AFY. The five commonly recognized aquifer units in the Oxnard Subbasin are the Oxnard, Mugu, Hueneme, Fox Canyon, and Grimes Canyon Aquifers (DWR 1965, 2006; Turner 1975). As described in Section 2.2, Hydrogeologic Conceptual Model, these aquifers are grouped into a UAS and an LAS, with the Oxnard and Mugu Aquifers composing the UAS and the Hueneme, Fox Canyon, and Grimes Canyon Aquifers composing the LAS. The UAS primarily comprises recent to upper Pleistocene age alluvial deposits of the Santa Clara River system.

UWCD (2018; Appendix C) developed the "Ventura Regional Groundwater Flow Model (VRGWFM)," a MODFLOW numerical groundwater flow model, for the Oxnard Subbasin, the Mound Basin, the western part of the LPVB, and the PVB. Details of the UWCD modeling effort are included in Appendix C. The groundwater budget analysis for the Oxnard Subbasin is based on the DWR Bulletin 118 basin boundary for the Oxnard Subbasin, and does not incorporate the remainder of the model domain. As with all groundwater flow models, the UWCD model has undergone several revisions and will continue to be revised as additional data are collected and the understanding of the hydrogeologic interactions in the model domain improves. This GSP uses the version of the model finalized in June 2018, which was developed to support the GSP process. This version of the model was used for the current and historical water budget analysis as well as for the future projected groundwater scenarios discussed in Section 2.4.5, Projected Future Water Budget and Sustainable Yield.

2.4.1 Sources of Water

Aquifer systems in the Oxnard Subbasin receive water from several sources. Native sources consist predominantly of rainfall infiltration within the Oxnard Subbasin and along its margins (mountain-front recharge), and subsurface inflows from the adjacent basins.

Water sources consist predominantly of streambed seepage from Calleguas Creek where it enters the Oxnard Subbasin from the adjoining PVB; streambed seepage from the Santa Clara River; artificial recharge by the UWCD; deep percolation of a portion of the irrigation water that is applied to agricultural, residential, and commercial lands, and to public open spaces; leakage from water distribution systems; septic system return flows; and wastewater treatment plant (WWTP) percolation ponds. Two small community WWTPs are located adjacent to the Santa Clara River in the Oxnard Subbasin. The Saticoy and the Montalvo WWTPs discharge treated effluent to percolation ponds.

Water supplies for the Oxnard Subbasin consist of locally pumped potable and nonpotable groundwater; imported water provided by UWCD (nonpotable) and Calleguas Municipal Water District (CMWD) (potable); nonpotable surface water provided by UWCD from its Freeman Diversion on the Santa Clara River and delivered to agricultural users in the Oxnard Subbasin via the PTP and to agricultural users in the Oxnard Subbasin and PVB via the Pleasant Valley Pipeline (PVP); the Oxnard Subbasin portion of a nonpotable water supplied provided by the Camrosa Water District (CWD) to the Pleasant Valley County Water District (PVCWD) from a diversion on Conejo Creek; and fully advanced treated recycled water produced by the City of Oxnard (the Groundwater Recovery Enhancement and Treatment (GREAT) Program) that began to be delivered to PVCWD and a few other agricultural users in early 2016.

The predominant municipal water suppliers in the Oxnard Subbasin are the City of Oxnard, the Port Hueneme Water Agency, the City of Ventura, and the Naval Base Ventura County. Water supplies for these municipal users include deliveries by UWCD via the Oxnard–Hueneme Pipeline, which obtains its water exclusively from wells located at the El Rio Spreading Grounds and along Rose Avenue. These municipal users may also receive imported water supplied by the CMWD. The City of Oxnard has wells within the Oxnard Subbasin. The City of Ventura also has wells in the Oxnard Subbasin, but uses water in their service areas inside and outside of the Oxnard Subbasin. Figure 1-8 shows a map of water purveyors with service areas within the Oxnard Subbasin.

In addition to groundwater pumping, agricultural water supplies are provided by UWCD via its PTP and PVP. The PTP services users in the Oxnard Subbasin, and the PVP services users in both the Oxnard Subbasin and the PVB. UWCD's water source for the PTP and PVP consists primarily of surface water obtained at the Freeman Diversion, which may include State Water Project water from Lake Piru. Groundwater is also extracted at five LAS wells located along the PTP pipeline

in many years and is included in the water supplied by the PTP. Occasionally, temporarily stored recharge water is pumped from shallow wells at UWCD's Saticoy Spreading Grounds and included in water supplied by the PVP.[7]

2.4.1.1 Surface Water

Figure 2-58, Oxnard Subbasin Stream Gauges and Water Infrastructure, shows the locations of streams and primary drainage systems in and around the Oxnard Subbasin, as well as water infrastructure locations including WWTP ponds, stream gauge stations, and the two diversion structures (Freeman and Conejo Creek Diversions) that provide a portion of the water supply for the Oxnard Subbasin.

Santa Clara River

The Santa Clara River interacts with the groundwater system in the Oxnard Subbasin. Reaches of the Santa Clara River in the Oxnard Subbasin range from perennial to intermittent to ephemeral (Appendix C). The river flows through the adjoining Santa Paula Basin into the Oxnard Subbasin in the Forebay area, and then out of the Oxnard Subbasin to the Mound Basin. Climatic and geologic characteristics of the Santa Clara River watershed result in an intermittent flow regime; however, flows can increase rapidly in response to high-intensity rainfall with the potential for severe flooding. During winter months, storm events may cause periods of continuous surface flow to the Pacific Ocean in the Santa Clara River.

Santa Clara River Recharge

The UWCD groundwater model used the MODFLOW STR stream package to simulate stream flow recharge. The stream flow discharge and percolation for the Santa Clara River were estimated using this stream package and the results are provided in Table 2-7a (for the semi-perched aquifer) Table 2-7b (for the UAS), and Table 2-7c (for the LAS). Except for 1998, 1999, and 2006, following the high rains in 1998 and 2005, the net effect of surface-water/groundwater interaction along the Santa Clara River was recharge to the UAS and the semi-perched aquifer in the Oxnard Subbasin (Appendix C). During these years, the net effect of surface-water/groundwater interaction was discharge from the UAS to the Santa Clara River. From 1985 to 2015, the average estimated recharge from the Santa Clara River to the semi-perched aquifer was 661 AFY, and the average estimated recharge to the UAS was 4,848 AFY (Tables 2-7a and 2-7b). These numbers do not include diversions from the Santa Clara River by the UWCD for artificial recharge at their spreading grounds or for direct use, which are discussed below.

[7] UWCD extracts limited amounts of temporarily stored water from shallow wells at its Saticoy Spreading Grounds to the PVP during periods of mounding, as authorized by FCGMA Resolution 2011-02.

Santa Clara River Diversions and Recharge

Table 2-8 summarizes the historical diversions of Santa Clara River water by UWCD and deliveries to both the Oxnard Subbasin and the PVB. On average, UWCD diverted 62,467 AFY from the Santa Clara River between 1985 and 2015, although diversion volumes, which depend on local climatic conditions, are highly variable (Table 2-8). These diversions may include State Water Project water held at Lake Piru and then delivered to the UWCD via the Santa Clara River. UWCD diverts surface water from the Santa Clara River in the Santa Paula Basin, just upstream of the Oxnard Forebay. The majority of this water, on average, is used for groundwater recharge in its spreading basins within the Oxnard Forebay (Table 2-8). Additionally, the water is used as supply for the PTP that services agricultural water users on the Oxnard Plain and as supply for the PVP agricultural water supply line that services agricultural water users in both the PVB and the Oxnard Subbasin. During drought periods, the relative percentage of diverted water used to recharge groundwater in the spreading basins declines, and the relative percentage of groundwater delivered through the PTP increases.

Table 2-9 provides the amounts of diverted water recharged by the UWCD in the three UWCD recharge grounds. Approximately 93% of the diverted water is recharged in the El Rio and Saticoy Spreading Grounds, on average, and the remaining 7% is recharged in the Noble Spreading Grounds (Table 2-9). Figure 2-59, Freeman Diversion and Uses in the Oxnard Subbasin, shows the amounts of diverted water by UWCD, and Figure 2-60, UWCD Groundwater Recharge, shows the annual recharge by UWCD. As shown in Table 2-10, the UWCD supply delivered in the PTP supply line is a mixture of surface water, and groundwater pumped by UWCD from their PTP wellfield, which pumps from the LAS, and less frequently, from their Saticoy wellfield.

Recharge from the UWCD groundwater recharge spreading grounds is included with recharge in Table 2-7a and Table 2-7b, but identified individually in Table 2-11. Of the total average annual recharge shown in Table 2-11 (73,669 AFY), UWCD groundwater recharge accounts for 48,306 AFY, or 65.6%. Recharge related to the PTP/PV system averaged 3,319 AFY from 1985 to 2015 as shown in Table 2-11, this is 4.5% of the total recharge. Of the average 62,467 AFY diverted from the Santa Clara River (Table 2-8), the average of 48,306 AFY (Table 2-11) recharged to the UWCD spreading grounds constitutes 77%.

The water delivered in the Oxnard–Hueneme Pipeline consists of groundwater pumped from the UAS and LAS near the El Rio Spreading Grounds. As shown in Table 2-10, deliveries from the Oxnard–Hueneme Pipeline are primarily used for municipal purposes, but small volumes are occasionally used for agricultural water supply along Hueneme Road on the southern part of the Oxnard Subbasin.

Calleguas Creek

Calleguas Creek enters the Oxnard Subbasin almost 2 miles upstream of its confluence with Revolon Slough and discharges to the Pacific Ocean at Mugu Lagoon. This reach of Calleguas Creek is perennial, with flow occurring primarily as maintenance flows provided by CWD (6 cubic feet per second required bypass flow at its diversion on Conejo Creek), inflows from agricultural field tile drains, inflows from Revolon Slough, and treated wastewater discharges into the lower reaches of Conejo Creek from the Camarillo Water Reclamation Plant (in the PVB) and the Hill Canyon WWTP in the City of Thousand Oaks. Table 2-12 summarizes the estimated flows in Arroyo Las Posas and Conejo Creek that enter Calleguas Creek, which then flows into the Oxnard Subbasin.

Table 2-12 summarizes the historical diversions of water from Conejo Creek by CWD at the Conejo Creek Diversion near Highway 101 that are supplied to the Oxnard Subbasin via PVCWD (Figure 2-58). The estimated diversions by CWD that are used in the Oxnard Subbasin are shown on Table 2-10. The source of water to Conejo Creek is mostly wastewater discharge from the Hill Canyon WWTP upstream of the Arroyo Santa Rosa Valley Basin. Table 2-10 shows only that portion of this water that is supplied to PVCWD and used in the Oxnard Subbasin.

Calleguas Creek Recharge

The UWCD (2018; Appendix C) groundwater model used the MODFLOW STR stream package to simulate recharge for Calleguas Creek in the Oxnard Subbasin. Calleguas Creek in the Oxnard Subbasin does not have hydraulic communication with the underlying UAS, but modeling indicates recharge to the semi-perched aquifer from 1985 to 2015 averaged 3,394 AFY (Table 2-7a).

Beardsley Wash/Revolon Slough

Beardsley Wash/Revolon Slough is a shallow drainage that captures shallow groundwater and stormwater from agricultural field tile drains and is lying at a similar elevation as the surrounding fields in its lower reaches where it is perennial. Consequently, it is not thought to be a recharge source.

2.4.1.2 Imported Water Supplies

Table 2-13 and Figure 2-61, Water Deliveries to the PVCWD and UWCD, show the historical volumes of water sold to the two water retailers (City of Oxnard and Port Hueneme Water Agency) that have historically purchased imported water from the CMWD. As shown in the table, sales to Port Hueneme Water Agency and to the City of Oxnard have occurred since 1996 and 1964, respectively. Sales have averaged approximately 1,564 AFY (from 1996 to 2015) and 13,500 AFY (from 1985 to 2015) to the Port Hueneme Water Agency and to the City of Oxnard, respectively.

As discussed in Section 2.4.1.1, Surface Water, the UWCD-diverted surface water from the Santa Clara River may include State Water Project water used for groundwater recharge in UWCD spreading basins or water directly delivered to water users by either the PVP or the PTP.

Percolation of Outdoor Irrigation (Urban Return Flows)

In the UWCD (2018; Appendix C) model, an assumed amount of M&I delivered water (5%) is estimated as groundwater recharge. This water is included as recharged water in Tables 2-7a and 2-7b and the total is provided in Table 2-11 by sources. Of the total annual recharge shown in Table 2-11 (73,669 AFY), percolation of applied water accounts for 928 AFY, or 1.3%.

2.4.1.3 Recycled Water Supplies

Two small community WWTPs are located adjacent to the Santa Clara River in the Oxnard Subbasin (Figure 2-58). The Saticoy WWTP and the Montalvo WWTP discharge treated effluent to percolation ponds. According the UWCD (Appendix C, p. 47), the average annual volumes of effluent discharged to the percolation ponds are approximately 80 and 200 AF, respectively, based on reports provided by California's State Water Resources Control Board online database, GeoTracker (http://geotracker.waterboards.ca.gov/). The Saticoy WWTP is within the Oxnard Forebay, where percolating water can directly recharge the UAS. The Montalvo WWTP is farther downstream, in an area of the Oxnard Subbasin where percolating water recharges the semi-perched aquifer, which is not used for water supply. According to UWCD (Appendix C), the Montalvo WWTP ceased operating in 2016, subsequent to the model calibration period.

Recycled water by the City of Oxnard began to be provided to PVCWD and other agricultural users in early 2016. Wastewater effluent generated by the City of Oxnard historically has been treated at the Oxnard WWTP and discharged directly to the Pacific Ocean. However, the first phase of the GREAT Program's Advanced Water Purification Facility (AWPF) was completed in 2015, which provides this supply to PVCWD and other growers on the southern part of the Oxnard Subbasin.

Recycled Water Recharge

Recharge from the Saticoy and Montalvo WWTPs is simulated in the UWCD model using the recharge package. The monthly percolation volumes reported in the state's GeoTracker system were added to other areal recharge rates specified for the model grid cells corresponding to the WWTP percolation-pond sites (Appendix C, p. 83).

2.4.1.4 Percolation of Precipitation

Much of the rain that falls in the Oxnard Subbasin quickly returns to the atmosphere via evaporation, or runs off to creeks, storm drains, and ultimately the ocean; the remainder percolates into the soil where it is subject to evapotranspiration (ET), soil absorption, or for plant use.

However, some precipitation can percolate into the soil and downward past the plant root zone and reach an underlying aquifer. This recharge process is referred to as deep infiltration (or percolation) of precipitation.

Deep percolation of precipitation depends on many factors, including: precipitation rate and duration, evaporation rate, ambient temperature, texture and slope of land surface, soil type and texture, antecedent soil moisture, vegetation cover, seasonal plant activity, and others is highly variable over time and location (Appendix C). Thus estimates of the percolation of precipitation is subject to substantial uncertainty.

UWCD downloaded monthly precipitation data for 180 rainfall gauge stations across the model domain from the Ventura County Watershed Protection District (http://www.vcwatershed.net/hydrodata/) (Appendix C, p. 80). UWCD used the Kriging method of geostatistical analysis to generate monthly precipitation distributions across model area, and the areal recharge from deep infiltration of precipitation was input to the model using the recharge package and was calculated as follows:

- If monthly precipitation is less than 0.75 inches, the precipitation is lost to evapotranspiration.
- If monthly precipitation is 0.75 to 1 inch, then recharge is assigned from 0% to 10% of precipitation (on a sliding scale).
- If monthly precipitation is 1 to 3 inches, then recharge is assigned from 10% to 30% of precipitation.
- If monthly precipitation is greater than 3 inches, then recharge is assigned as 30% of precipitation.
- Urban (non-agricultural) land use, including residential, commercial, and industrial areas: 5% of the total water precipitation.
- Undeveloped land: 10% of the total water precipitation.

Precipitation Recharge

Recharge from the percolation of precipitation is include with recharge in Tables 2-7a and 2-7b, but identified individually in Table 2-11. Of the total annual recharge shown in Table 2-11 (73,669 AFY), percolation of precipitation accounts for 8,947 AFY, or 12.1%.

2.4.1.5 Basin Groundwater Subsurface Inflow and Outflow

UWCD (Appendix C) provided model monthly groundwater inflows and outflows between the Oxnard Subbasin and the Pleasant Valley, Mound, west Las Posas Valley, and Santa Paula Basins, and unincorporated areas, as well as for three coastal segments adjacent to the Pacific Ocean. These inflows and outflows were combined to generate the annual estimates used for the groundwater budget. Additionally Table 2-7b shows the subsurface flows between the UAS and the semi-perched aquifer as well as the UAS and the LAS.

2.4.1.6 Mountain-Front Recharge

UWCD (Appendix C) used the MODFLOW WEL package to input mountain-front recharge specified flux amounts into model grid cells adjacent to each small drainage system (sub-watershed) along the margins of the model area, and to the base of elevated bedrock or mountains areas. In the Oxnard Subbasin, mountain-front recharge was applied at the base of the volcanic outcrops adjacent to the southwest side of the CWD Water Reclamation Plant shown on Figure 2-58, and along the Santa Monica Mountains. Recharge rates were calculated from monthly precipitation rates for the area receiving the precipitation. The monthly mountain-front-recharge rate inputs to the model followed the precipitation/recharge-percentage relationship used for agricultural return flows (Section 2.4.1.9, Percolation of Agricultural Irrigation Water [Agricultural Return Flows]). For the Oxnard Subbasin, mountain-front recharge from and to the volcanic outcrops and the Santa Monica Mountains (Unincorporated Areas) are shown in Tables 2-7a and 2-7b.

2.4.1.7 Septic Systems Recharge

The number and location of septic systems in the Oxnard Subbasin were estimated by DBS&A (2017) based on the Ventura County septic database. If septic systems were present within any parcel within a tract, it was assumed that all parcels in the tract contained septic systems. The number of septic systems in the Forebay decreased beginning in 2011 due to a County of Ventura program to phase out septic systems in the area. It was estimated that the number of systems in the Forebay decreased from 1,823 in 1985 to 485 in 2015 (DBS&A 2017).

Household water use and annual disposal was estimated to decrease from 0.21 AFY per household for 1985 to 1997, 0.20 AFY per household for 1988 to 2010, and 0.16 AFY per household from 1998 to 2015 based on DeOreo and Meyer (2012, as cited in DBS&A 2017). The resulting estimated percolation from all septic systems was estimated to decrease from 382 AFY in 1985 to 75 AFY in 2015 (DBS&A 2017). These values are small compared to known recharge values (UWCD spreading) and other estimated recharge values (Santa Clara River recharge; agricultural and municipal return flows).

The UWCD groundwater model assumed that septic system recharge was widespread and small relative to other recharge sources and incorporated septic system return flows implicitly as a component of agricultural and municipal return flows.

2.4.1.8 Distribution Systems Leakage

Distribution system losses from leakage of water-supply pipelines, sewer lines, and storm drains are included with M&I return flows in the UWCD model.

2.4.1.9 Percolation of Agricultural Irrigation Water (Agricultural Return Flows)

Groundwater pumping is discussed in Section 2.4.2.1; only recharge from agricultural return flow is discussed in this section. The UWCD groundwater model used the following water sources that were applied to irrigated land and assumed an agricultural return flow of 14%:

- Extracted groundwater from wells for agricultural use
- Groundwater and surface water delivered by the PVCWD pipeline
- Surface water diverted from Conejo Creek to PVCWD

If the precipitation is more than 1 inch per month, the agricultural return flow ratio is compared with precipitation recharge ratio. If the precipitation recharge ratio is larger than 14%, the agricultural return flow is replaced by the precipitation recharge ratio.

Agricultural Recharge

Recharge from the agricultural return flow is included with recharge in Tables 2-7a and 2-7b, and identified individually in Table 2-11. Of the total annual recharge shown in Table 2-11 (73,669 AFY), agricultural return flow accounts for 12,169 AFY, or 16.5%.

2.4.2 Sources of Water Discharge

Sources of groundwater discharge predominantly include groundwater pumping, tile drain discharges, and evapotranspiration. However, depending on groundwater levels (as noted in Section 2.4.1.1), groundwater/surface interactions can also discharge groundwater to surface water, which can then either be lost from the Subbasin or recharge elsewhere in the Subbasin. Likewise, groundwater pumped and used for agricultural, M&I, and domestic purposes can produce return flows (Section 2.4.1.2, Imported Water Supplies; Section 2.4.1.7, Septic Systems Recharge; Section 2.4.1.8, Distribution Systems Leakage; and Section 2.4.1.9). Subsurface groundwater flows (interbasin flows) can discharge groundwater from the Oxnard Subbasin to the adjacent groundwater basins, unincorporated areas, and the Pacific Ocean (Section 2.4.1.5, Basin Groundwater Subsurface Inflow and Outflow).

2.4.2.1 Groundwater Pumping

Table 2-14 shows the amount of groundwater pumped for agricultural, M&I, and domestic uses by aquifer systems from the UWCD model results. UWCD modeled groundwater withdrawals using the multi-node well (MNW2) package. The extraction amounts in Table 2-14 were combined with well types from the FCGMA well database to distinguish the amounts extracted by type. Figure 2-62, Groundwater Pumping, shows the amounts of agricultural, M&I, domestic, and total groundwater pumped from the Oxnard Subbasin. Groundwater pumping is also shown in the Oxnard Subbasin groundwater budget in Tables 2-7a through 2-7c.

Available data indicate that during the calendar year 2015, a total of 80,814 AF (Table 2-14) of groundwater was extracted from the Oxnard Subbasin, of which, about 69% was for agricultural use (55,973 AF), 30% was for M&I use (24,648 AF), and about 0.2% was for domestic use (193 AF). For the Oxnard Subbasin, the FCGMA groundwater pumping database contains 732 known wells, of which 403 are currently listed as active use, 217 have been destroyed, 106 are inactive, and 6 could not be located. An additional 13 agricultural wells are in the UWCD database outside the FCGMA boundary.

Not all the groundwater produced in the Oxnard Subbasin remains in the Subbasin. Four agricultural users (PVCWD, Coastal Berry Co., Montalvo Water Co., Alta Mutual Water Co., and Guadalasca Mutual Water Co.) may export a portion of the groundwater that they pump from the Oxnard Subbasin to areas inside the PVB. The PVCWD uses a combination of pumped groundwater from the Oxnard Subbasin and the PVB, delivered UWCD water from the PVP, CWD-delivered water from Conejo Creek, and other sources. FCGMA groundwater pumping records indicate that from 1985 to 2015, approximately 41% and 59% of PVCWD's pumped groundwater has come from the PVB and the Oxnard Subbasin, respectively. A geographic information system (GIS) calculation of the area of the PVCWD in Figure 1-8 indicates that approximately 56% of the PVCWD service area is in the Oxnard Subbasin, and the remaining 44% is in the PVB. For purposes of estimating PVCWD water deliveries, a ratio of 44% PVB and 56% Oxnard Subbasin area was assumed to be a reasonable basis for PVCWD water supplies between the two basins. As shown in Table 2-10, during some years, groundwater pumping by PVCWD in the Oxnard Subbasin is less than this ratio resulting in a net import from the PVB. Conversely, in some years, groundwater pumping in the Oxnard Subbasin is more than this ratio, resulting in a negative import (an export) to the adjacent PVB.

2.4.2.2 Tile Drain Recharge Losses

Tile drains are used beneath many agricultural lands in the Oxnard Subbasin to maintain a sufficiently deep groundwater table where poorly drained soils create shallow groundwater conditions that can negatively affect plant health and crop yields. These conditions prompted the installation of tile drains across most of the Oxnard Plain in the 1900s. Tile drains are present beneath many agricultural land parcels in the PVB as well. These drains discharge to local drainage ditches and then to surface water bodies Revolon Slough and Calleguas Creek. The flows in the tile drains are not metered.

Tile drains were implemented in the UWCD groundwater model using MODFLOW's drain package (DRN). Model grid cells with simulated tile drains in the uppermost active layer correspond with agricultural areas where tile drains are known or suspected to exist. The UWCD model has calculated losses to tile drains based on groundwater model simulated water levels and the results are provided in Tables 2-7a and 2-7b. Average annual loss to tile drains in the UWCD model is 10,752 AFY.

2.4.2.3 Evapotranspiration (ET)

The UWCD model used the U.S. Fish and Wildlife Service online "Wetlands Mapper" (https://www.fws.gov/wetlands/data/mapper.html) to indicate areas of riparian vegetation along stream channels. These areas, together with parts of the Santa Clara River (including its estuary), Revolon Slough/Beardsley Wash, McGrath Lake, Ormond Beach wetlands, and Mugu Lagoon wetlands were used to estimate evapotranspiration (ET) (Appendix C). ET is the discharge of groundwater from the saturated zone where the water table is present at very shallow depths. Such conditions mostly occur in the Oxnard Subbasin where the semi-perched aquifer interacts with surface water bodies, which is also where riparian vegetation is typically found in the Oxnard Subbasin. These areas are hydraulically connected to, and exchange fresh- to brackish-water with, the semi-perched aquifer near the coast. It should be noted that nearly all of the riparian vegetation that takes up groundwater in the Oxnard Subbasin occurs in land overlying the semi-perched aquifer, which is rarely, if ever, pumped as a source of agricultural or M&I water supply. Additional discussions about these areas are in Sections 2.3.6 and 2.3.7.

UWCD (Appendix C) applied USGS estimates for ET rates from 1.1 to 5.2 feet per year to calculated long-term annual average groundwater discharge as ET. UWCD implemented ET using MODFLOW's ET package, EVT. Model grid cells corresponding to areas of mapped wetlands with shallow groundwater were simulated. The maximum ET flux was 0.010 feet per day (3.65 feet per year) for model grid cells subject to ET over their entire area. The maximum ET flux is scaled down proportionally for grid cells that are only partially occupied by wetlands. The ET surface elevation was set at 3 feet bgs, and the ET extinction depth was set at 5 feet bgs (Appendix C, p. 84).

According to UWCD model results, the estimated annual loss from ET is 8,328 AFY, with most coming from the semi-perched aquifer (8,291 AFY, a shown in Table 2-7a) and a small amount from the UAS (37 AFY, as shown in Table 2-7b).

2.4.3 Current and Historical Water Budget Analysis

2.4.3.1 Water Year Types

Water year type is based on the percentage of the water year precipitation compared to the 30-year precipitation average. Types are defined in this GSP as wet ($\geq$ 150% of average), above normal ($\geq$ 100% to <150% of average), below normal (> 75% to <100% of average), dry (> 50% to <75% of average), and critical (<50% of average). Figures 2-22 through 2-25 show the water year type from 1986 to 2015. The water type year for 2015 is dry.

2.4.3.2 Historical Water Budget Analysis

DWR has designated the Oxnard Subbasin as a high-priority basin. The DWR GSP Regulations, Section 354.18, Water Budget, states that, "If overdraft conditions occur, as defined in Bulletin 118, the water budget shall include a quantification of overdraft over a period of years during which water year and water supply conditions approximate average conditions." According to the DWR Bulletin 118, "A basin is subject to critical overdraft when continuation of present water management practices would probably result in significant adverse overdraft-related environmental, social, or economic impacts" (DWR 2006). Bulletin 118 Interim Update 2016 (October 18, 2016) lists the Oxnard Subbasin (Basin 4-004.02) as being in critical overdraft (DWR 2016).

Because of Bulletin 118's listing of the Oxnard Subbasin as being in critical overdraft, the DWR GSP Regulations, Section 354.18 (b)(5), requires a quantification of the overdraft over a period of years during which water years and water supply conditions approximated average conditions. Using the water year types discussed in Section 2.4.3.1, and the above normal (> 100% to <150% of average) and the below normal (> 75% to <100% of average) water year types to bracket water supply conditions approximating average conditions, the following years have near average conditions: 1988, 1991, 1992, 1994, 1996, 1997, 2000, 2001, 2003, 2006, 2008, 2010, and 2011.

The change in storage during these years was an increase of 6,045 AFY in the UAS and an increase of 1,029 AFY in the LAS (Tables 2-7b and 2-7c). However, the net seawater intrusion during these years was 4,189 AFY in the UAS, and 5,225 AFY in the LAS (Table 2-7c). Thus, the net change in groundwater storage for the UAS without seawater intrusion was an increase in 1,856 AFY in the UAS and the net change in storage without seawater intrusion in the LAS was a decrease of 4,196 AFY. Total groundwater pumping during these years averaged 47,080 AFY in the UAS and 28,893 AFY in the LAS for a total of 65,973 AFY (Tables 2-7b and 2-7c). This quantification of the overdraft over a period of years during which water years and water supply conditions approximated average conditions would indicate that the Oxnard Subbasin was in overdraft of about 2,340 AFY (4,196 AFY [LAS] − 1,856 AFY [UAS]). It should be noted that except for 2011, Tables 2-7b and 2-7c show net seawater intrusion for the UAS and LAS for each of the years that approximated average conditions. This seawater intrusion analysis suggests that based on the historical pumping patterns and pumping amounts, the Oxnard Subbasin was in overdraft by about 2,340 AFY during average water supply conditions.

GSP regulation Section 354.18 (c)(2) requires that the historical water budget information be used to evaluate availability or reliability of past surface water supply deliveries and aquifer response to water supply and demand trends relative to water year type. Historically, the Oxnard Subbasin has received surface water supply deliveries directly from one main source: the Santa Clara River. Additionally, but to a lesser degree, Calleguas Creek, imported water delivered by the CMWD, and Conejo Creek water diversions have contributed surface water supplies to the Oxnard

Subbasin. Table 2-8 shows that the diversion of Santa Clara River from 1985 to 2015 have averaged 62,467 AFY, and leakage from the Santa Clara River has averaged about 5,650 AFY (770 AFY [see Tables 2-7a and 2-7b] + 4,989 AFY [see Table 2-7b] – 109 AFY [see Table 2-7b]). This indicates a total Santa Clara River supply of approximately 68,117 AFY. In comparison, Calleguas Creek has supplied approximately 3,394 AFY (see Table 2-7a) to the semi-perched aquifer, CMWD has delivered 14,543 AFY of imported water (see Table 2-13), and Conejo Creek diverted flows have averaged 1,159 AFY (see Table 2-10). These last three sources total 19,096 AFY, or 22% of the total surface water deliveries (87,213 AFY) or only 28% of the total Santa Clara River. Tables 2-7a, 2-13, and 2-10 for Calleguas Creek, CMWD imported water, and Conejo Creek (starting in 2002), respectively, suggest that these sources are reliable and not significantly affected by the water year type. However, diversions from the Santa Clara River as shown in Table 2-8 and on Figure 2-59 vary widely depending on climate conditions. The high diversion years of 1993, 1998, and 2005 were wet years (Figures 2-22 and 2-59). The low diversion years of 1990, 2013 and 2014 were critical dry years, and 2015 was a dry year (Figures 2-22 and 2-59). Diversions of surface water by the UWCD from the Santa Clara River are critical to the surface water supplies of the Oxnard Subbasin.

2.4.3.3 Current (2015) Groundwater Conditions

Groundwater level data presented in Section 2.3, Groundwater Conditions, and the change in storage estimates for the calendar year 2015 from Tables 2-7a through 2-7c indicate that the Oxnard Subbasin had greater groundwater outflows than inflows in 2015. The estimated 2015 groundwater change in storage is a loss of about 38,703 AF (Tables 2-7a through 2-7c). This change in groundwater storage would be larger and groundwater storage declines greater if seawater intrusion had not replaced groundwater in the Oxnard Subbasin. Model results in Tables 2-7a through 2-7c indicate a net seawater intrusion in 2015 of approximately 19,200 AF. There was a net outflow of water to the Pacific Ocean in the semi-perched aquifer of approximately 504 AF (Table 2-7a), but a positive inflow (seawater intrusion) in the UAS of approximately 11,633 AF (Table 2-7b) and a positive inflow in the LAS of approximately 8,081 AF (Table 2-7c).

Tables 2-7a through 2-7c show that from 1985 to 2015, seawater intrusion has replaced freshwater in storage in the Oxnard Subbasin in the LAS every year, and 23 of 31 years in the UAS. Tables 2-7a and 2-7b indicate that seawater flows both in and out of the Oxnard Subbasin in the semi-perched aquifer and the UAS. However, groundwater generally flows out of the Subbasin from the semi-perched aquifer (which is not currently a usable aquifer), and seawater usually inflows to the UAS and LAS, which affects usable groundwater aquifers.

2.4.3.4 Estimates of Historical Sustainable Yield

Historical estimates for the Oxnard Subbasin sustainable yield[8] have also included the PVB. These historical sustainable yield estimates include the following:

- FCGMA, 1985, Groundwater Management Plan
- FCGMA, 2007, 2007 Update to the Fox Canyon Groundwater Management Agency Groundwater Management Plan
- UWCD and CMWD, 2012, Preliminary Draft Yield Analysis (UWCD 2016c)
- UWCD, 2016, Proposed Method for Estimating Sustainable Yield (UWCD 2016c)

All of these historical estimates for the combined Oxnard Subbasin and PVB sustainable yield are about 65,000 AFY, but do not demonstrate that this groundwater pumping rate prevents seawater intrusion. The UWCD Open-File Report 2017-02 (UWCD 2017a) Scenario D estimated that seawater intrusion would be halted if: (1) there were no groundwater pumping in what the report refers to as an assumed future "seawater intrusion management area," (2) groundwater pumping were reduced by about 70% in LAS in the Oxnard Plain (excluding the Forebay) and in the PVB, and (3) there were no reduction in UAS pumping. However, this scenario assumed that groundwater for irrigation in the assumed future "seawater intrusion management area" would be supplied by a project to be implemented in the future. The combined estimated sustainable yield under Scenario D was 59,900 AFY for the Oxnard Subbasin (excluding the seawater intrusion management area) and the PVB.

To estimate the sustainable yield under historical conditions where no future project is implemented, the UWCD conducted Scenario F in Addendum Open-File Report 2017-02a (UWCD 2017b). In Scenario F, the assumed seawater intrusion management area was eliminated, and a uniform reduction in groundwater pumping was simulated to achieve sustainable yield. The scenario defined a sustainable yield as maintaining groundwater elevations along the coast at levels sufficiently high to prevent seawater intrusion and other forms of saline water intrusion. In the Port Hueneme area, where the UAS and LAS are believed to have direct hydraulic connection with the Pacific Ocean, UWCD assumed minimum thresholds[9] as defined in Open File Report 2017-02. However, under Scenario F, UWCD assumes a minimum threshold for the LAS near Mugu Lagoon to be −20 feet msl instead of 18.5 feet msl, as assumed in Open File Report 2017-02. This is because the most recent UWCD Saline Intrusion Update report (UWCD 2016b) interpreted the source of elevated

[8] SGMA requires that an estimate of the "sustainable yield" be made for the Oxnard Subbasin based on historical data. However, as used in this section the sustainable yield does not address undesirable results, which are discussed in Chapter 3, Sustainable Management Criteria.

[9] "Minimum threshold" used here is in reference to the Open File Report 2017-02 usage and not to the minimum threshold discussed in Chapter 3 of this GSP.

chloride concentrations in the LAS near Mugu Lagoon to be saline water yielded from marine clays and/or from adjacent Tertiary-age sedimentary rocks, as a result of large declines in potentiometric head in the LAS over the past several decades, and not a direct result of current seawater intrusion. Additional discussion of saline water and seawater intrusion can be found in Section 2.3.3.

Based on the results from UWCD Scenario F (UWCD 2017b, Table 2-2), the sustainable yield under historical conditions with no changes from the current pumping locations (i.e., without water supply or infrastructure projects) for the Oxnard Subbasin would be a total of 39,000 AFY (27,000 AFY from the Oxnard Plain and 12,000 AFY from the Oxnard Forebay area). The results from UWCD Scenario F (2017b, Table 2-2) would indicate a total of 10,000 AFY for the PVB. Evaluation of the volume of water entering and leaving the model along the Pacific coastline under Scenario F indicated that there is a net outflow of water from the model to the Pacific Ocean over the 31-year simulation period. Groundwater left the model to the ocean in the UAS, while a smaller amount of seawater intruded the LAS. This suggests that additional production may be possible from the Oxnard Subbasin by reducing groundwater pumping in the LAS and increasing it in the UAS. This shift in pumping may also better protect against seawater intrusion.

2.4.4 General Uncertainties in the Water Budget

There are several limitations and uncertainties associated with other water budget terms used for both the historical and future conditions due to necessary simplifying of assumptions and data gaps. Uncertainties about the groundwater models used are discussed in Section 2.4.5.8. Some of the general water budget limitations and/or uncertainties include the following:

1. The reporting of groundwater pumping outside the boundaries of the FCGMA is limited and there is a possibility of underreporting of pumping within the FCGMA boundaries due to non-reporting, inaccurate reporting, and equipment problems. Additional future data collection is needed to verify the existence and extent of and to eliminate this data gap. However, the amount of pumping outside the FCGMA boundary is expected to be minor given the limited number of wells (estimated at fewer than 12).
2. The hydrologic base period (calendar years 1985–2015, DWR's 31-year base period) may not necessarily be representative of long-term average conditions. As shown on Figure 1-6, Long-Term Precipitation Trends in the Oxnard Plain, this was a generally wetter-than-average period. However, the future water budget analysis in Section 2.4.5, which used a model 50-year period with an average precipitation period (1939 to 1979), does not suggest that the historical sustainable yield estimate based on this wetter-than-average period is too high. The combined UAS and LAS sustainable yield for the future water budget ranged from 30,000 AFY to 48,000 AFY (Section 2.4.5.9). The estimated historical sustainable yield using UWCD Scenario F (Section 2.4.3.4) of 39,000 AFY is within this range. The uncertainty associated with the future water budget sustainable yield is discussed in Section 2.4.5.8.

3. Conclusions regarding uncertainties in the UWCD model are discussed in Section 2.4.5.8, Uncertainty Analysis, and in the Dudek peer review of the UWCD model (Appendix E).
4. Subsurface inflows and outflows across basin boundaries are not measurable. The groundwater level data in these areas by themselves do not provide a clear indication of groundwater flow directions because of the limited water level measurements and the variation in time between measurements. The UWCD model provides a significantly improved understanding of these boundary fluxes and their variability under different pumping and recharge conditions in the region, but checking model values with observations and calculating the gradient with three-point groundwater flow problems should be considered to verify model estimates. Attempts to estimate inflows and outflows across basin boundaries using well groundwater level data was attempted for this GSP, but data gaps and limited well locations screened in one aquifer made the results unreliable.
5. Some semi-perched groundwater in the Oxnard Subbasin is potentially captured by tile drains, rather than recharging the UAS. This uncertainty could be reduced through installation of instrumentation and measurement of discharges from the tile drains.
6. Currently, aquifer-specific water level maps are not reliable to estimate aquifer change in groundwater storage due to the limited number and distribution of aquifer-specific water wells. Dedicated monitoring wells could installed and equipped with water-level measuring data loggers in all of the aquifers. This would help decrease uncertainty in estimates of future changes in groundwater storage by enabling use of aquifer-specific water-level maps to check groundwater model change in storage calculations.

2.4.5 Projected Future Water Budget and Sustainable Yield

Several model scenarios were developed in accordance with SGMA guidelines to assess the future sustainable yield of the Oxnard Subbasin. Each future scenario covered a 50-year time frame, from 2020 to 2069. In this GSP, the period from 2020 to 2039 is referred to as the implementation period, and the period from 2040 to 2069 is referred to as the sustaining period. The sustainable yield was determined from the model scenarios that did not result in a net flux of seawater into either the UAS or the LAS in Oxnard Subbasin, within the level of the model uncertainty, during the 30-year sustaining period (Figure 2-63, Coastal Flux from the UWCD Model Scenarios).

Because the Oxnard Subbasin is hydraulically connected to the PVB and the WLPMA, the sustainable yield of the Oxnard Subbasin is influenced by groundwater production and projects in these adjacent basins. The UWCD model used to assess the sustainable yield of the Oxnard Subbasin includes both the PVB and the WLPMA in the model domain, and the modeling assumptions associated with each scenario discussed below include the assumptions made for these adjacent basins.

The model scenarios developed for Oxnard Subbasin, the PVB, and the WLPMA all included existing projects and the 2070 DWR climate-change factor applied to the 1930–1970 historical precipitation and hydrology base period. The model scenarios are the following:

- Future Baseline Simulation (2015–2017 average production rates adjusted by surface water deliveries)
- Future Baseline Simulation With Projects (2015–2017 average production rates adjusted by surface water deliveries; potential future projects that met the DWR conditions for incorporation in the GSP)
- Reduction With Projects (35% reduction of 2015–2017 average production rates adjusted by surface water deliveries for the UAS and LAS in the Oxnard Subbasin, 20% reduction for the UAS and LAS in PVB; and 20% in the LAS in the WLPMA; potential future projects that met the DWR conditions for incorporation in the GSP)
- Reduction Without Projects 1 (reduction of 2015–2017 average production rates adjusted by surface water deliveries by 25% in the UAS, 60% in the LAS, and 45% for wells screened in both aquifer systems in the Oxnard Subbasin; 25% reduction for the UAS and the LAS in the PVB; and 25% in the LAS in the WLPMA)
- Reduction Without Projects 2 (reduction of 2015–2017 average production rates adjusted by surface water deliveries by 55% in the UAS and the LAS in the Oxnard Subbasin; 20% reduction for the UAS and the LAS in the PVB; and 20% in the LAS in the WLPMA)
- Reduction Without Projects 3 (reduction of 2015–2017 average production rates adjusted by surface water deliveries by 55% in the UAS and the LAS in the Oxnard Subbasin; 0% reduction for the UAS and the LAS in the PVB; and 0% in the LAS in the WLPMA)

Two of the model scenarios listed above, the Future Baseline Simulation With Projects Scenario and the Reduction With Projects Scenario, incorporated projects that were approved for inclusion in the GSP model scenarios by the FCGMA Board. The Board's approval of these projects only indicates that they were sufficiently defined by the project proponent to be analyzed as part of the GSP. It does not indicate that these specific projects will necessarily be constructed or, conversely, that other projects will not be developed in the future. The projects included are discussed in more detail with the description of each scenario below.

An initial set of four modeling simulations were conducted using the future baseline conditions with two 50-year average climate cycles (1930–1979 and 1940–1989), and two DWR climate-change factors (2030 and 2070) applied to each of the 50-year periods. The 1930 to 1979 50-year period with the 2070 DWR climate-change factor was found to be the most conservative and was used for the comparison with the other modeling simulations conducted. Additional details about the selection of the two 50-year average climate cycles is provided in Section 2.4.5.7.

In addition to the initial set of four modeling simulations and the six model scenarios listed above, the Reduction Without Projects Scenario 1 was simulated with the DWR 2030 climate-change factor and with a historical precipitation and hydrology base period from 1940 to 1989. These simulations were conducted to better understand the potential impact of precipitation patterns and climate-change factors on the model results. While the results of these simulations were primarily used as a check on the minimum threshold groundwater elevations discussed in Chapter 3, the predicted impact on seawater intrusion is discussed in Section 2.4.5.7.

Over the next 5 years, as additional projects are developed the model assumptions discussed below will need to be altered and incorporated into the 5-year GSP evaluation.

2.4.5.1 Future Baseline Model Simulation

SGMA requires that the GSP include an assessment of the "future baseline" conditions. In the Future Baseline Scenario, in order to assess whether or not groundwater extractions from the Oxnard Subbasin, PVB, and WLPMA were sustainable at their current rates, the average annual 2015–2017 production rates, adjusted by surface water deliveries, were simulated. Future surface water deliveries were estimated by UWCD using Santa Clara River flows for historical periods, the 1930–1979 climate period adjusted for future DWR climate-change factors, and estimated diversions based on similar historical Santa Clara River flows. UWCD also considered current allowable diversions, which accounts for current environmental restraints and diversion operating conditions, and optimization of water deliveries for the PVP and spreading basins. Additional details about the UWCD future model scenarios are included in Appendix L, UWCD GSP Model Documentation. For the Oxnard Subbasin, this rate is approximately 68,000 AFY without surface diversions, for the combined UAS and LAS (Table 2-15).

Future Baseline Scenario Model Assumptions

The Future Baseline model simulation included the following:

- Constant pumping at the 2015–2017 average rate of approximately 68,000 AFY adjusted for surface water deliveries in the Oxnard Subbasin (39,000 AFY in the UAS; 29,000 AFY in the LAS), 13,000 AFY in the WLPMA, and approximately 14,000 AFY in the PVB
- Starting water levels equal to the final 2015 water levels from the historical simulations
- Precipitation and streamflow for two 50-year periods (1930–1979 and 1940–1989), with an average precipitation that equaled the average precipitation for the entire historical record
- Estimates of Santa Clara River surface water available for diversion prepared by UWCD staff using climate-change factors provided by DWR and historical measured flow in the river for the 50-year periods

- East Las Posas Management Area outflows to Arroyo Las Posas to the PVB from the CMWD model
- Projects that are currently operating in the Subbasin or currently under development

The historical measurements of precipitation for the two 50-year periods were modified using the DWR 2030 and 2070 climate-change factors. Stream flows were estimated using the adjusted rainfall. UWCD estimated Santa Clara River flow and the volume of water diverted to direct delivery and spreading. Pumping was decreased where the water is delivered to account for the surface water delivered. Future streamflow in Conejo and Calleguas Creeks in Pleasant Valley was estimated by regression.

No projects currently under development were identified in the Oxnard Subbasin, but two projects under development in the PVB were incorporated into the future baseline simulation because these projects affect inflows to the Oxnard Subbasin. The two projects in PVB are the City of Camarillo's North Pleasant Valley Desalter (desalination) Project and Conejo Creek Diversion deliveries to Pleasant Valley County Water District. The North Pleasant Valley Desalter Project was simulated by dividing the total project pumping of 4,500 AFY between project extraction wells 02N20W19L05 and 02N20W19F04. Additionally, pumping from Well 02N21W34C01 increased by 1,300 AFY to reflect a shift in areas of production.

In this scenario, Conejo Creek diversions will increase deliveries to agriculture by an additional 2,200 AFY to make the total deliveries in the PVB 4,500 AFY starting in 2020. The Conejo Creek Project allows CWD to increase pumping by up to 4,500 AFY based on credits for surface water delivered to PVCWD. However, in running the future simulations, it became apparent that the model area identified for production from the CWD wells was not able to extract the full amount. The amount of simulated CWD pumping that was achievable in the future baseline simulation was therefore limited to 2,816 AFY.

It is important to remember that groundwater extractions are not the only source of water to the Oxnard Subbasin. Surface water deliveries vary between the model scenarios because the model adjusts the deliveries of Santa Clara River water based on simulated groundwater elevations in the Oxnard Subbasin Forebay. Therefore, the total water available to the Oxnard Subbasin in the Future Baseline Scenario is approximately 72,000 AFY. Additionally, although the model calculates the groundwater extractions and surface water deliveries with precision, the values reported in Table 2-15 have been rounded to the nearest 1,000 AFY to reflect the uncertainty in the model calculations.

Future Baseline Scenario Model Results

Both the modeled flux of seawater and the particle tracks from the Future Baseline Scenario indicate that continuing the 2015–2017 extraction rate for the next 50 years would cause net seawater intrusion in both the UAS and LAS as well as ongoing inland migration of the saline water impact front (Figure 2-63 and Figure 2-64a through 2-64e, UWCD Model Particle Tracks, Future Baseline). The average annual flux of seawater into the UAS during the sustaining period was 4,400 AFY and the average annual flux of seawater into the LAS during the sustaining period was 5,300 AFY. The saline water impact front continued to migrate landward throughout the sustaining period, even during wetter than average climate periods. Based on these factors, the current areal and aquifer-system distribution of groundwater production at the extraction rates modeled in the Future Baseline Scenario was determined not to be sustainable.

2.4.5.2 Future Baseline With Projects Model Simulation

Future Baseline With Projects Scenario Model Assumptions

Modeling of future conditions included all of the assumptions incorporated into the Future Baseline simulation, and also incorporated potential future projects approved for inclusion by the FCGMA Board. Incorporation of the potential future projects in the Future Baseline With Projects Scenario neither represents a commitment by FCGMA to impose pumping reductions in the amounts specified at the wells identified below nor a commitment to move forward with each project included in the future model scenarios. Assumptions about projects and project implementation may have changed since the modeling was conducted and will continue to change over the next 5 years. These changes should be incorporated into the modeling for the 5-year GSP evaluation.

In the Oxnard Subbasin simulated future projects included delivery of 4,600 AFY of recycled water to farmers in the vicinity of Hueneme Road, expansion of the GREAT Program to increase groundwater recharge by 4,500 AFY in the Saticoy Spreading Grounds, and a 504 AFY reduction of pumping through temporary fallowing. These projects are discussed in detail in Chapter 5 of this GSP.

To simulate the delivery of 4,600 AFY of recycled water to farmers in the vicinity of Hueneme Road, pumping from wells near the coast in the pumping depression area (UWCD model parameter zone 4; Figure 2-65, UWCD Model Zones) was reduced uniformly and proportionally by 4,600 AFY. Additionally, pumping from Wells 02N22W23C05S and 02N22W23C07S in the Forebay was adjusted to allow the City of Oxnard to pump up to 8,000 AFY of accumulated credits for 2,600 AF recycled agricultural water delivered annually from the GREAT Program (FCGMA 2018).

To simulate the expansion of the GREAT Program, spreading recharge was increased by 4,500 AFY starting in 2025. To simulate the 504 AFY reduction of pumping through fallowing, pumping from Wells 01N22W26K04S, 01N22W27H02S, 01N22W26M03S, 01N22W26K03S, 01N22W26P02S, 01N22W26Q03S, and 01N22W26D05S was reduced uniformly and proportionally by 504 AFY. It should be noted that these wells were selected for modeling purposes only and use of these wells in the model simulations was not intended to represent any planned pumping restrictions or limitations on these wells.

In the PVB, a proposed temporary fallowing project was simulated near the pumping depression (in model parameter zone 11; Figure 2-65). This project would generate a 2,407 AFY reduction in pumping, however, actual simulated fallowing totaled 2,234 AFY due to considerations of existing contracts for the delivery of surface water from the Santa Clara River. Pumping was preferentially reduced in wells in the LAS within the PVB to the extent possible.

In the WLPMA, future projects included the purchase of 1,762 AFY of water to be delivered to the eastern portion of the WLPMA in lieu of groundwater extraction. Simulated pumping was reduced in Zone Mutual Water Company Wells 02N20W07R03, 02N20W07R02, 02N20W08M01, 02N20W08E01, and 02N20W08F01, as well as Ventura County Waterworks District No. 19 Wells 02N20W06R01 and 02N20W08B01. The pumping reductions of 1,762 AFY were applied uniformly and proportionally across the wells.

After incorporating the potential future projects, the average groundwater production rate for the UAS in the Oxnard Subbasin was 41,000 AFY and the average groundwater production rate for the LAS in the Oxnard Subbasin was 24,000 AFY for the Future Baseline With Projects Scenario. In the PVB, the average groundwater production rate was 4,300 AFY in the UAS and 7,600 AFY in the LAS. In the WLPMA, the average production rate in the LAS was 11,200 AFY.

Because the projects that were incorporated into the Future Baseline With Projects Scenario included reduction of approximately 500 AFY from temporary fallowing in Oxnard, and deliveries of recycled water from the GREAT Program, the groundwater extractions in the LAS decreased by approximately 4,000 AFY, relative to the Future Baseline Scenario. At the same time, the groundwater extractions from the UAS increased by approximately 2,000 AFY, relative to the Future Baseline Scenario, in the Future Baseline With Projects Scenario (Table 2-15). Consequently, the effect of incorporating the projects was to shift groundwater extraction from the LAS to the UAS, and reduce overall groundwater extraction by approximately 2,000 AFY. The total water available to the Oxnard Subbasin in the Future Baseline With Projects Scenario was approximately 73,000 AFY, with the reduction in groundwater production being offset by the addition of approximately 3,000 AFY of project water.

Future Baseline With Projects Scenario Model Results

Although the shift in groundwater extractions from the LAS to the UAS and reduction in the total extractions helped reduce the flux of seawater into the Oxnard Subbasin, overall the Future Baseline With Projects Scenario resulted in approximately 3,000 AFY of seawater flux into the UAS and 2,700 AFY into the LAS during the sustaining period (Figures 2-66a through 2-66e, UWCD Model Particle Tracks, Base Case with Projects). Particle tracks for the Future Baseline With Projects Scenario also showed net landward migration of the saline water impact front during the sustaining period (Figures 2-66a through 2-66e). Based on these factors, the current areal and aquifer-system distribution of groundwater production at the extraction rates modeled in the Future Baseline With Projects Scenario was determined not to be sustainable.

2.4.5.3 Reduction With Projects Scenario

Reduction With Projects Scenario Model Assumptions

The Reduction With Projects Scenario included all of the assumptions incorporated into both the Future Baseline simulation and the Future Baseline With Projects Scenario. The Reduction With Projects Scenario also included a 35% reduction of 2015–2017 average production rates for the UAS and LAS in the Oxnard Subbasin, 20% reduction for the UAS and LAS in the PVB, and 20% in the LAS in the WLPMA. Groundwater production rates were reduced linearly over the implementation period and held constant during the sustaining period. In the Oxnard Subbasin UAS, the simulated groundwater production rate in model year 2020 was 40,000 AFY. The production rate in model year 2040 at the beginning of the sustaining period was 24,300 AFY.[10] The average production from the UAS for the sustaining period was 26,500 AFY. In the LAS, the simulated groundwater production rate in model year 2020 was 28,500 AFY and the simulated groundwater production rate in model year 2040 was 14,000 AFY. The average production rate from the LAS for the sustaining period was 12,800 AFY.

Reduction With Projects Model Scenario Results

Reducing groundwater production in the UAS and LAS, and shifting some groundwater extractions from the LAS to the UAS via the potential future projects in the Reduction With Projects Scenario, resulted in an average flux of groundwater out of the UAS into the Pacific Ocean of approximately 3,300 AFY during the sustaining period. In the LAS, the Reduction With Projects Scenario resulted in an average flux of approximately 1,200 AFY of seawater into the LAS during the sustaining period (Figures 2-67a through 2-67e, UWCD Particle Tracks, Reduction With

[10] Modeled extraction rates depend on climate, surface water availability, and simulated groundwater elevations for each model year. The reductions implemented reflect a reduction in overall water demand for the Oxnard Subbasin and are not the exact percentage specified for any given year. Therefore, the extraction rate from the UAS in 2040 is 39% of the extraction rate in 2020 rather than the 35% specified in the model scenario description.

Projects Simulation). Particle tracks for the Reduction With Projects Scenario indicate that the location of the 2015 saline water impact front would likely migrate toward the Pacific Ocean in the UAS as freshwater diluted saline concentrations, while it would experience some landward migration in the LAS (Figures 2-67a through 2-67e). The continued landward migration of the saline water impact front in the LAS suggests that groundwater production in the LAS may need to be reduced further than it was in this model scenario, while at the same time the groundwater production rate in the UAS was likely lower than it needed to be, as groundwater left the aquifers of the UAS and entered the Pacific Ocean.

2.4.5.4 Reduction Without Projects Scenario 1

Reduction Without Projects Scenario 1 Model Assumptions

The Reduction Without Projects Scenario 1 included all of the assumptions incorporated into the Future Baseline simulation but did not include the projects that were incorporated into the Future Baseline With Projects and Reduction With Projects Scenarios. In the Oxnard Subbasin, the Reduction Without Projects Scenario 1 also included a 25% reduction of 2015–2017 average production rates for wells screened solely in the UAS, a 60% reduction of the 2015–2017 average production rates for wells screened solely in the LAS, and a 45% reduction of the 2015–2017 average production rates for wells screened in both aquifer systems. The 2015–2017 average pumping rate was reduced by 25% in the UAS and LAS in the PVB, and 25% in the LAS in the WLPMA. Groundwater production rates were reduced linearly over the implementation period and held constant during the sustaining period.

In the Oxnard Subbasin UAS, the simulated groundwater production rate in model year 2020 was 40,300 AFY. The production rate in model year 2040 at the beginning of the sustaining period was 27,300 AFY.[11] The average production from the UAS for the sustaining period was 27,200 AFY. In the LAS, the simulated groundwater production rate in model year 2020 was 33,100 AFY and the simulated groundwater production rate in model year 2040 was 13,000 AFY. The average production rate from the LAS for the sustaining period was 11,600 AFY. The resulting average combined extraction rate from the two aquifer systems was approximately 39,000 AFY for the 30-year sustaining period (Table 2-15).

Reduction Without Projects Scenario 1 Model Results

The fluxes in the UAS and LAS in the Reduction Without Projects Scenario 1 were similar to those simulated in the Reduction With Projects Scenario (Figures 2-68a through 2-68e, UWCD Model

[11] Modeled extraction rates depend on climate, surface water availability, and simulated groundwater elevations for each model year. The reductions implemented reflect a reduction in overall water demand for the Oxnard Subbasin and are not the exact percentage specified for any given year. Therefore, the extraction rate from the UAS in 2040 is 32% of the extraction rate in 2020 rather than the 25% specified in the model scenario description.

Particle Tracks, Reduction Without Projects Scenario (1) Simulation). There was an average flux of groundwater out of the UAS into the Pacific Ocean of approximately 2,800 AFY during the sustaining period in the Reduction Without Projects Scenario 1. In the LAS, the Reduction Without Projects Scenario 1 resulted in an average flux of approximately 1,300 AFY of seawater into the LAS during the sustaining period. Particle tracks for this scenario indicate that the 2015 saline water impact front would likely migrate toward the Pacific Ocean in the UAS as freshwater diluted saline concentrations in the UAS, while it would migrate farther landward in the LAS than in the Reduction With Projects Scenario (Figures 2-68a through 2-68e). As in the Reduction With Projects Scenario, the continued landward migration of the saline water impact front in the LAS suggests that groundwater production in the LAS may need to be reduced further than it was in the Reduction Without Projects Scenario 1, while at the same time the groundwater production rate in the UAS was likely lower than it needed to be, as groundwater left the aquifers of the UAS and entered the Pacific Ocean.

2.4.5.5 Reduction Without Projects Scenario 2

Reduction Without Projects Scenario 2 Model Assumptions

The Reduction Without Projects Scenario 2 included all of the assumptions incorporated into the Future Baseline simulation but did not include the projects that were incorporated into the Future Baseline With Projects and Reduction With Projects Scenarios. In the Oxnard Subbasin, the Reduction Without Projects Scenario 2 also included a 55% reduction of 2015–2017 average production rates for the UAS and LAS. The 2015–2017 average pumping rate was reduced by 20% in the UAS and LAS in the PVB, and 20% in the LAS in the WLPMA. Groundwater production rates were reduced linearly over the implementation period and held constant during the sustaining period.

In the Oxnard Subbasin UAS, the simulated groundwater production rate in model year 2020 was 40,000 AFY. The production rate in model year 2040 at the beginning of the sustaining period was 17,600 AFY.[12] The average production from the UAS for the sustaining period was 17,600 AFY. In the LAS, the simulated groundwater production rate in model year 2020 was 33,100 AFY and the simulated groundwater production rate in model year 2040 was 12,800 AFY. The average production rate from the LAS for the sustaining period was 11,500 AFY. The resulting average combined extraction rate from the two aquifer systems was approximately 29,000 AFY for the 30-year sustaining period (Table 2-15).

[12] Modeled extraction rates depend on climate, surface water availability, and simulated groundwater elevations for each model year. The reductions implemented reflect a reduction in overall water demand for the Oxnard Subbasin and are not the exact percentage specified for any given year. Therefore, the extraction rate from the UAS in 2040 is 56% of the extraction rate in 2020 rather than the 55% specified in the model scenario description.

Model results indicate that under this scenario the groundwater flux in the LAS between the PVB and the Oxnard Subbasin is mostly reversed from the above scenarios from model year 2027 to 2055. The groundwater flow during this period (2027 to 2055) in the LAS is from the Oxnard Subbasin to the PVB. This increased the seawater intrusion in the LAS in the Oxnard Subbasin, exacerbating Oxnard Subbasin's seawater intrusion problem.

Reduction Without Projects Scenario 2 Model Results

There was an average flux of groundwater out of the UAS into the Pacific Ocean of approximately 4,700 AFY during the sustaining period in the Reduction Without Projects Scenario 2 and an average flux of approximately 900 AFY of seawater into the LAS. As in the Reduction Without Projects Scenario 1, the continued inflow of seawater into the LAS suggests that groundwater production in the LAS may need to be reduced further than it was in the Reduction Without Projects Scenario 2, while at the same time the groundwater production rate in the UAS was likely lower than it needed to be, as groundwater left the aquifers of the UAS and entered the Pacific Ocean.

2.4.5.6 Reduction Without Projects Scenario 3

Reduction Without Projects Scenario 3 Model Assumptions

The Reduction Without Projects Scenario 3 included all of the assumptions incorporated into the Future Baseline simulation but did not include the projects that were incorporated into the Future Baseline With Projects and Reduction With Projects Scenarios. In the Oxnard Subbasin, the Reduction Without Projects Scenario 3 also included a 55% reduction of 2015–2017 average production rates for the UAS and LAS. The 2015–2017 average pumping rate was not reduced in the UAS and LAS in the PVB or in the LAS in the WLPMA. Groundwater production rates were reduced in the Oxnard Subbasin linearly over the implementation period and held constant during the sustaining period.

In the Oxnard Subbasin UAS, the simulated groundwater production rate in model year 2020, at the beginning of the implementation period, was 40,000 AFY. The production rate in model year 2040 at the beginning of the sustaining period was 18,100 AFY. The average production from the UAS for the sustaining period was 18,100 AFY. In the LAS, the simulated groundwater production rate in model year 2020 was 33,200 AFY and the simulated groundwater production rate in model year 2040 was 13,700 AFY. The average production rate from the LAS for the sustaining period was 12,300 AFY. The resulting average combined extraction rate from the two aquifer systems was approximately 30,000 AFY for the 30-year sustaining period (Table 2-15).

Reduction Without Projects Scenario 3 Model Results

There was an average flux of groundwater out of the UAS into the Pacific Ocean of approximately 3,700 AFY during the sustaining period in the Reduction Without Projects Scenario 3 and an average flux of approximately 1,400 AFY of seawater into the LAS. As in the Reduction Without Projects Scenarios 1 and 2, the continued inflow of seawater into the LAS suggests that groundwater production in the LAS may need to be reduced further than it was in the Reduction Without Projects Scenario 3, while at the same time the groundwater production rate in the UAS was likely lower than it needed to be, as groundwater left the aquifers of the UAS and entered the Pacific Ocean.

Model results indicate that under this scenario the groundwater flux in the LAS between the PVB and the Oxnard Subbasin is reversed from model year 2027 to the end of the model period (2070). The groundwater flow during this period (after 2027) in the LAS is from the Oxnard Subbasin to the PVB. This significantly increases the seawater intrusion in the LAS in the Oxnard Subbasin exacerbating Oxnard Subbasin's seawater intrusion problem.

2.4.5.7 Alternative Climate and Rainfall Patterns

To assess the potential impacts on model predictions from alternate climate-change assumptions and precipitation patterns, two additional simulations were conducted using the Reduction Without Projects Scenario 1. These additional simulations changed the scenario assumptions in two ways. First, the Reduction Without Projects Scenario 1 was simulated using the DWR 2030 climate-change factor, rather than the more conservative 2070 climate-change factor. This revised scenario is referred to as the Reduction Without Projects Scenario 1a. Second, the Reduction Without Projects Scenario 1a was simulated with the DWR 2030 climate-change factor applied to the historical precipitation and hydrology period from 1940 to 1989, rather than the original period from 1930 to 1979. This revised scenario is referred to as the Reduction Without Projects Scenario 1b.

The 50-year periods from 1930 to 1979 and 1940 to 1989 were selected because they were the two periods from the entire historical record with the closest mean, or average, precipitation to the mean precipitation for the entire historical record of 14.4 inches. The mean precipitation for the historical period from 1930 to 1979 is also 14.4 inches and the mean precipitation from the historical period from 1940 to 1989 is 14.6 inches. These periods also have a similar distribution of precipitation years to the historical record and a similar average drought length to the average drought length in the historical record. The primary difference between the two periods is the timing of the dry periods in the records. The period from 1930 to 1979 begins with a 7-year dry period from 1930 to 1936 (model years 2020–2026), while the period from 1940-1989 begins with a 5-year wetter than average period (model years 2020–2024). The differences between these scenarios are discussed below.

Reduction Without Projects Scenario 1a

The Reduction Without Projects Scenario 1a had approximately 2,200 AFY of freshwater flowing out of the UAS to the Pacific Ocean and 1,500 AFY of seawater intrusion into the LAS during the sustaining period. Compared to the Reduction Without Projects Scenario 1, there was approximately 600 AFY less flow out of the UAS and approximately 200 AFY more flow into the LAS from the Pacific Ocean (Figure 2-63). This is the result of lower water levels in the UAS and LAS under this scenario than the Reduction Without Projects Scenario 1. The 2030 climate-change factor showed lower potential water levels and more seawater intrusion than the 2070 climate-change factor; however, the difference between the simulated fluxes in the two scenarios is within the uncertainty of the model predictions and is not significant compared to other uncertainties in the future simulations, including the actual precipitation pattern that will prevail over the period from 2020 to 2069.

Reduction Without Projects Scenario 1b

The Reduction Without Projects Scenario 1b had approximately 4,300 AFY of freshwater flowing out of the UAS to the Pacific Ocean and 760 AFY of seawater intrusion into the LAS during the sustaining period. Compared to the Reduction Without Projects Scenario 1a, the Reduction Without Projects Scenario 1b had 2,100 AFY more freshwater leaving the UAS and 800 AFY less seawater intrusion in the LAS during the sustaining period (Figure 2-63). The reduced seawater intrusion and increased freshwater outflow are the result of higher simulated groundwater levels during the sustaining period than in the Reduction Without Projects Scenario 1a. The groundwater elevations in the Reduction Without Projects Scenario 1b rise faster in response to the wetter than average precipitation pattern that occurs at the beginning of the model period (model years 2020–2024) and remain higher during the sustaining period (model years 2040–2069) than they do in the Reduction Without Projects Scenario 1a. The differences in seawater intrusion and water levels between the Reduction Without Projects Scenarios 1a and 1b show that the model is more sensitive to actual precipitation patterns than it is to the predicted relative changes in climate between 2030 and 2070. The actual climate and precipitation patterns over the next 5 years should be used to revise the model simulations and refine the estimated potential for net seawater intrusion during the sustaining period.

2.4.5.8 Uncertainty Analysis

A review of the UWCD model was conducted to provide an independent evaluation of the model for use in the context of developing a GSP and to quantify the uncertainty associated with the modeling estimates of the sustainable yield for the basins in the model domain (Appendix E). UWCD conducted a *local* sensitivity analysis of its model prior to this review, in order to evaluate how the model input parameters obtained via the model calibration affect the model outputs. The peer review conducted an additional *global* sensitivity analysis that keys off of their local sensitivity analysis, and allows for a quantitative assessment of uncertainty in seawater flux and sustainable yield.

General Results

Results of the model scenarios discussed above indicate that changes to groundwater production rates or to extraction locations for the Oxnard Subbasin are needed to avoid seawater intrusion in the LAS during the sustaining period. Understanding the uncertainties in the model predictions underscores the desirability of making gradual changes in production rates while additional monitoring and studies help to reduce these uncertainties.

The largest potential sources of uncertainty in the model were found to be hydraulic properties, for a given precipitation pattern. As discussed in Section 2.4.5.7, Alternative Climate and Rainfall Patterns, precipitation and surface water availability are a critical input parameter for predictive simulations. Critical areas of hydraulic properties were constrained in the historical simulations by aquifer testing. In particular, the model parameters that accounted for the most variance (approximately 37% of total variance) in minimizing error between observed groundwater levels and model simulated heads throughout the model were the horizontal hydraulic conductivities assigned to the Oxnard and Mugu Aquifers in the Forebay. The values assigned in the model were consistent with horizontal hydraulic conductivities determined from aquifer testing in that area. The fact that the most sensitive parameter assignments were well constrained by observations reduces uncertainty and provides good confidence in model predictions of groundwater levels overall.

Additionally and importantly, these same zones of horizontal hydraulic conductivity accounted for approximately 24% of total variance in model calculations of seawater flux across the ocean boundary. In contrast, the conductance of the ocean general head boundaries only accounted for approximately 3% of the variance in seawater flux. This indicates that the movement of artificially recharged groundwater from the Forebay to the coast is key in seawater flux. Additionally, the amount of Forebay recharge that enters the WLPMA rather than moving toward the coast was found to affect the seawater flux more than the conductance of the general head boundaries representing the ocean outcrops at the model boundary.

Stream infiltration, a parameter that was estimated based on the correlation between predicted and observed water levels accounted for approximately 5% of the variance in seawater flux and horizontal and vertical hydraulic conductivity of the aquitard separating Layer 5 (Mugu Aquifer) from Layer 7 (the Hueneme Aquifer) in the PVB accounted for approximately 3% of the variance in seawater flux. This sensitivity is associated with the flux across the basin boundary and flow between the UAS and the LAS. Again, these parameters in the PVB accounted for more seawater flux than that accounted for by the conductance of the aquifer outcrops beneath the ocean.

Quantifying Uncertainty

The uncertainty associated with model simulations of seawater flux was calculated by determining the relationship between simulated groundwater levels in wells near the coast and simulated seawater

flux at the ocean boundary for the six model scenarios described in Section 2.4.5. This relationship was established by calculating the mean errors between observed and simulated groundwater levels at the coastal wells and applying the relationship between simulated groundwater levels and seawater flux to determine what the flux would have been had the model exactly reproduced observed groundwater levels. This analysis was conducted for both the entire model period from 2020 to 2069 and the sustaining period from 2040 to 2060. In general the analysis indicated that there is approximately 2,000 AFY uncertainty due to model error in simulated total seawater flux, though this varies depending on which time frame is analyzed. Alternatively, using calculated seawater flux from 121 realizations in a global sensitivity analysis yielded a comparable result of approximately 3,000 AFY uncertainty in seawater flux. The global sensitivity analysis is discussed in Appendix E. For the sustaining period, the relationship between seawater flux and pumping gives a confidence interval for the sustainable yield of approximately ± 6,000 AFY for the UAS and ± 3,600 AFY for the LAS. For the entire model period from 2020 to 2069, the relationship between seawater flux and pumping gives a confidence interval for the sustainable yield of approximately ± 4,100 AFY for the UAS and ± 2,300 AFY for the LAS. The relationship between seawater flux and water levels will continue to be refined through data collection and analysis over successive 5-year periods for the GSP evaluations, and these uncertainty estimates are anticipated to contract accordingly.

2.4.5.9 Estimates of Future Sustainable Yield

The sustainable yield for Oxnard Subbasin was assessed by examining the modeled flux of seawater into the Subbasin over the 50-year model period and 30-year sustaining period predicted by the UWCD model for the Subbasin, the PVB, and the WLPMA. The sustaining period was assessed because SGMA recognizes that undesirable results may occur during the 20-year implementation period, as basins move toward sustainable groundwater management. In addition to the flux of seawater, particle tracks from the model runs were analyzed to evaluate the potential migration of the current extent of saline water impact in the UAS and the LAS. The particles were placed along the approximate inland extent of the zone of saline water impact in 2015. Scenarios that minimize the net flux of seawater into the Oxnard Subbasin and the landward migration of the saline water impact front over the 30-year sustaining period are sustainable for Oxnard, while those that allow for net seawater intrusion and landward migration of the saline water impact front are not.

None of the model scenarios described in Section 2.4.5 successfully eliminated seawater intrusion in the LAS during the 50-year model period or the 30-year sustaining period, while the majority of the model scenarios resulted in net freshwater loss from the UAS to the Pacific Ocean. Therefore, none of the direct model scenarios was used to estimate the sustainable yield of the Oxnard Subbasin. Instead, the relationship between seawater flux and groundwater production from the model scenarios for both the 50-year period and the 30-year period were plotted graphically and the linear relationship between the seawater flux and groundwater production was used to predict the quantity of groundwater production that would result in no net seawater

intrusion over the periods in either the UAS or the LAS. This method is also discussed in Appendix E, Section 2.3.2.2, and the seawater flux and groundwater production plots are provided in Appendix E as Figures 4 and 5. In order to provide separate estimates for the two aquifer systems, independent relationships between groundwater production and seawater intrusion were developed for the UAS and LAS. It was possible to develop relationships for each aquifer within the UAS and LAS, but in general wells in the Oxnard Subbasin are screened in multiple aquifers in each aquifer system. Therefore, for management purposes, the sustainable yield estimates were developed for the aquifer systems rather than for independent aquifers.

The sustainable yield of the UAS was calculated to be approximately 32,000 AFY for both the entire 50-year model period and the 30-year sustaining period. The uncertainty in the estimated sustainable yield for the UAS is lower if only the sustaining period is used. For the entire model period, the uncertainty in the sustainable yield is approximately ± 6,000 AFY, whereas for the sustainable period the uncertainty in the sustainable yield is approximately ± 4,100 AFY. Consequently, this analysis suggests that the sustainable yield of the UAS may be as high as 38,000 AFY or as low as 26,000 AFY.

The sustainable yield of the LAS was calculated to be approximately 7,000 AFY for both the entire 50-year model period and the 30- year sustaining period. The uncertainty in the estimated sustainable yield for the LAS is lower if the entire model period is used. For the entire model period, the uncertainty in the sustainable yield of the LAS is approximately ± 2,300 AFY, whereas for the sustainable period the uncertainty in the sustainable yield is approximately ± 3,600 AFY. Consequently, this analysis suggests that the sustainable yield of the LAS may be as high as 10,600 AFY or as low as 3,400 AFY.

It is anticipated that the analysis for the 5-year update to the GSP will focus on differential extractions on the coast and inland, particularly in the LAS. Additional modeling is recommended for the 5-year update process to understand how changes in pumping patterns can increase the overall sustainable yield of the Oxnard Subbasin. As this understanding improves, projects to support increases in the overall sustainable yield can be developed.

2.5 MANAGEMENT AREAS

In order to sustainably manage the groundwater resources of the Oxnard Subbasin, the Subbasin has been divided into five management areas (Figure 2-69, Oxnard Subbasin Management Areas). These areas are the Forebay Management Area, the West Oxnard Plain Management Area, the Oxnard Pumping Depression Management Area, the Saline Intrusion Management Area, and the East Oxnard Plain Management Area (EOPMA). These areas are separated by hydrogeologic and water quality characteristics.

The Forebay Management Area is in the northeastern Oxnard Subbasin. In this area of the Subbasin, the semi-perched aquifer and clay cap are absent, resulting in direct communication between the alluvium and the underlying aquifer systems. The majority of surface water recharge to the Oxnard Subbasin occurs within the UWCD spreading grounds located in the Forebay Management Area.

The West Oxnard Plain Management Area lies within the Oxnard Subbasin jurisdictional boundaries. The West Oxnard Plain Management Area, which includes the City of Oxnard, is south and west of the Forebay Management Area.

The Oxnard Pumping Depression Management Area is south and east of the West Oxnard Plain Management Area. The boundaries of the Oxnard Pumping Depression Management Area include are Highway 101 to the north, North Rice Avenue and North Rose Avenue to the west, East Hueneme Road and Highway 1 to the south, and the Bailey Fault and the PVB to the east. This management area was established based on the low groundwater elevations historically recorded in both the UAS and the LAS in the area.

The Saline Intrusion Management Area lies to the west of the Oxnard Pumping Depression Management Area, and south of the West Oxnard Plain Management Area. The Saline Intrusion Management Area includes both Port Hueneme and Point Mugu, where saline intrusion has occurred historically and has impacted wells in both the UAS and LAS.

The EOPMA lies to the east of the Bailey Fault and is predominantly within the jurisdiction of the County of Ventura. A small area on the northern boundary between the EOPMA and the PVB is covered by the Camrosa Water District–Oxnard Subbasin GSA (see Figure 1-2).The FCGMA jurisdictional boundary extends into the EOPMA along the boundary with the Oxnard Pumping Depression Management Area (Figure 2-69). This management area was established based on groundwater elevation and chloride concentration differences across the Bailey Fault, which acts as a barrier to groundwater flow (Turner 1975; Section 2.2.1).

This GSP has been prepared for the entire Oxnard Subbasin and management areas defined in this GSP will be managed by the FCGMA. The minimum thresholds and measurable objectives developed in Chapter 3 are based on the data available in the Forebay Management Area, the West Oxnard Plain Management Area, the Oxnard Pumping Depression Management Area, and the Saline Water Intrusion Management Area. Comparable historical data on groundwater elevation, storage, production, and quality are not available for the EOPMA. Therefore, the minimum thresholds and measurable objectives for the West Oxnard Plain and Oxnard Pumping Depression Management Areas, which are adjacent to the EOPMA, will be applied to age and/or depth equivalent hydrostratigraphic units in the EOPMA. As additional data are collected in the EOPMA, separate minimum thresholds and management objectives may be developed. If changes to the minimum thresholds and management objectives are warranted, justification will be provided in the 5-year GSP updates.

Notes: FCA = Fox Canyon Aquifer; ft/ft = feet per feet; ft msl = feet above mean sea level; GCA = Grimes Canyon Aquifer; SWN = State Well Number.

[a] Negative gradients are directed downward.

[b] The Oxnard and Mugu Aquifers compose the UAS, and the Hueneme, Fox, and Grimes Aquifers compose the LAS. Aquifer designations were provided by UWCD.

2013	−268	968
2014	5,821	819
2015	1,520	1,476
Average	**5,682**	**3,452**

Notes:

[a] Results presented are in water years, and will not match values presented in Section 2.4 text and Tables 2-7a through 2-7c, which are presented in calendar years.

[b] Negative numbers represent discharge of groundwater to the stream.

Table 2-6
Ecological Assets

Ecological Assets	Lower Santa Clara River	McGrath Lake	Ormond Beach Wetlands	Mugu Lagoon and Wetlands	Lower Calleguas Creek	Revolon Slough
Locally important, special-status, rare, threatened, or endangered plants or animals supported by the GDE	• Santa Ana sucker • western pond turtle • tidewater goby • coast horned lizard • white rabbit-tobacco • southern riparian scrub • least Bell's vireo *(CDFW 2016)* • steelhead	• Belding's savannah sparrow • burrowing owl • California least tern • least Bell's vireo • salt marsh bird's-beak • sandy beach tiger beetle • silvery legless lizard • Ventura Marsh milk-vetch *(CDFW 2016)* • sandy beach tiger beetle • brown pelican • western least bittern • white-faced ibis • osprey • white-tailed kite • northern harrier • sharp-shinned hawk • Cooper's hawk • light-footed clapper rail • western snowy plover • long-billed curlew • California least tern • western yellow-billed cuckoo • burrowing owl • southwestern willow flycatcher • loggerhead shrike • least Bell's vireo • yellow warbler • yellow-breasted chat • Belding's savannah sparrow • California red-legged frog • southwestern pond turtle • silvery legless lizard • San Diego horned lizard • two-striped garter snake • south coast garter snake • Townsend's big-eared bat *(ESA 2003, Table 3-2)*	• Belding's savannah sparrow • California least tern • Coulter's goldfields • California brackish water snail • salt marsh bird's-beak • tidewater goby • western snowy plover *(CDFW 2016)* • western snowy plover • California least tern • California brown pelican • light-footed clapper rail • least Bell's vireo • Southern California saltmarsh shrew • San Diego black-tailed jackrabbit • double-crested cormorant • American bittern • great blue heron • great egret • snowy egret • black-crowned night heron • white-faced ibis • white-tailed kite • northern harrier • Cooper's hawk • sharp-shinned hawk • merlin • mountain plover • long-billed curlew • western burrowing owl • loggerhead shrike • yellow warbler • California horned lark • tricolored blackbird • south coast garter snake • tiger beetle • sandy beach tiger beetle • wandering skipper • globose dune beetle • red sand-verbena • spiny rush • woolly seablite *(WRA 2007)*	• arroyo chub • Belding's savannah sparrow • burrowing owl • California brown pelican • California least tern • Coulter's goldfields • estuary seablite • ferruginous hawk • globose dune beetle • least Bell's vireo • light-footed clapper rail • salt marsh bird's-beak • sandy beach tiger beetle • senile tiger beetle • southern coastal salt marsh • tidewater goby • wandering (=saltmarsh) skipper • western snowy plover *(CDFW 2016)* • peregrine falcon	• arroyo chub • two-striped gartersnake • least Bell's vireo *(CDFW 2016)*	• arroyo chub *(CDFW 2016)* • least Bell's vireo *(Appendix K)*

Table 2-6
Ecological Assets

Ecological Assets	Lower Santa Clara River	McGrath Lake	Ormond Beach Wetlands	Mugu Lagoon and Wetlands	Lower Calleguas Creek	Revolon Slough
Important or critical habitat provided for native species (USFWS 2016b)	• southwestern willow flycatcher critical habitat (569 acres) • tidewater goby critical habitat (22 acres) • western snowy plover critical habitat (35 acres) • steelhead critical habitat • Audubon California Important Bird Area	• southwestern willow flycatcher critical habitat (32 acres) • tidewater goby critical habitat (18 acres) • Ventura Marsh milk-vetch critical habitat (78 acres) • Audubon California Important Bird Area	• tidewater goby critical habitat (88 acres) • western snowy plover critical habitat (26 acres) • Audubon California Important Bird Area	• western snowy plover critical habitat (51 acres) • Wetland of Regional Importance in the Western Hemisphere Shorebird Reserve Network • Essential Fish Habitat (EFH) and Habitat Areas of Particular Concern (HAPC) are designated for Pacific Coast groundfish and coastal pelagic species in the nearshore marine and estuarine habitats • Laguna Point to Latigo Point Area of Special Biological Significance • Audubon California Important Bird Area	None	None
Portion of GDE that is a recognized wetland (USFWS 2016a; Appendix K)	1,180 acres (93%)	197 acres (71%)	207 acres (96%)	5,943 acres (93%)	6 acres (4%)	2 acres (8%)
Protected area, locally important conservation or wildlife corridor plan areas within the GDE	• The Nature Conservancy (160 acres) • City of Ventura (1.2 acres)	• McGrath State Beach (56 acres) • Mandalay State Beach (29 acres) • Mandalay County Park (0.7 acres)	• The Nature Conservancy (129 acres) • Port Hueneme Beach Park (1.3 acres)	• Point Mugu State Park (0.1 acres)	None	None
List any environmental beneficial uses designated in the RWQCB Basin Plan for the surface water found in the groundwater basin.	• Wildlife Habitat (WILD) • Rare, Threatened, or Endangered Species (RARE) • Migration of Aquatic Organisms (MIGR) • Spawning, Reproduction, and/or Early Development (SPWN) • Wetlands (WET) Also REC1, REC2	• Estuarine Habitat (EST) • Wildlife Habitat (WILD) • Rare, Threatened, or Endangered Species (RARE) • Wetlands (WET) Also REC1, REC2	• Estuarine Habitat (EST) • Wildlife Habitat (WILD) • Rare, Threatened, or Endangered Species (RARE) • Wetlands (WET) Also, REC1, REC2	• Estuarine Habitat (EST) • Marine Habitat (MAR) • Wildlife Habitat (WILD) • Preservation of Biological Habitats of Special Significance (BIOL) • Rare, Threatened, or Endangered Species (RARE) • Migration of Aquatic Organisms (MIGR) • Spawning, Reproduction, and/or Early Development (SPWN) • Shellfish Harvesting (SHELL) • Wetlands (WET) Also REC1 (potential), REC2	**Reach 2:** • WARM • COLD • Wildlife Habitat (WILD) • Rare, Threatened, or Endangered Species (RARE) • Wetlands (WET) Also REC1, REC2	**Reach 4 (Revolon Slough):** • WARM • Wildlife Habitat (WILD) • Wetlands (WET) Also REC1, REC2
Is the GDE area composed of >30% native vegetation? (Appendix K)	Yes	Yes	Yes	Yes	Yes	Yes

Notes: AF = acre-feet; LPVB = Las Posas Valley Basin; PVB = Pleasant Valley Basin; UAS = Upper Aquifer System.

[a] Results from these tables are in calendar years, and will not exactly match data in Table 2-5 and Sections 2.3.2 and 2.3.6, which are presented in water years.

[b] A negative number indicates that water entered storage.

Notes: AF = acre-feet; CWD = Camrosa Water District; LAS = Lower Aquifer System; O-H = Oxnard–Hueneme; PTP = Pumping Trough Pipeline; PVCWD = Pleasant Valley County Water District; PVP = Pleasant Valley Pipeline; UAS = Upper Aquifer System; UWCD = United Water Conservation District.

[a] Negative value indicates groundwater pumped in the Oxnard Subbasin and used in Pleasant Valley.

[b] For water supplied by Camrosa Water District to PVCWD, 56% is used in the Oxnard Subbasin and 44% in the Pleasant Valley Basin; only the 56% used in the Oxnard Subbasin is shown in this table.

[c] For water supplied via the UWCD PVP to PVCWD, 56% is used in the Oxnard Subbasin and 44% in the PVB; only the 56% used in the Oxnard Subbasin is shown in this table.

[d] UWCD extracts limited amounts of temporarily stored water from shallow wells at its Saticoy Spreading Grounds to the PVP during periods of mounding, as authorized by FCGMA Resolution 2011-02.

Table 2-11
Recharge by Type (AF)

Calendar Year	UWCD Spreading	Precipitation	Pumped Groundwater	Applied Water (M&I and Domestic)	PTP/PVP System	Total Recharge

Table 2-11
Recharge by Type (AF)

Calendar Year	UWCD Spreading	Precipitation	Pumped Groundwater	Applied Water (M&I and Domestic)	PTP/PVP System	Total Recharge
Minimum	**2,516**	**735**	**8,695**	**635**	**1,254**	**17,386**
Average	**48,306[a]**	**8,947**	**12,169**	**928**	**3,319**	**73,669**

Notes: AF = acre-feet; M&I = municipal and industrial; PTP = Pumping Trough Pipeline; PVP = Pleasant Valley Pipeline; UWCD = United Water Conservation District.

[a] The difference between 48,306 AFY in this table and 48,279 AFY in Table 2-9 is caused by how UWCD tracks monthly spreading. The UWCD hydrologist entered a negative number in some of the monthly records to reconcile their percolation total. So for the following 3 months, Table 2-7 has:

- August 1988 recharge to Saticoy is −8 acre-feet.
- April 1990 recharge to Saticoy is −11.34 acre-feet.
- September 1997 recharge to Saticoy is −255.06 acre-feet.

Minimum	**840**	**7,612**	**1,249**	**0**	**0**	**2,450**
Average	**13,936**	**24,153**	**2,423**	**2,069**	**227**	**4,720**

Notes: AF = acre-feet; CWD = Camrosa Water District; M&I = municipal and industrial; NA = not applicable; PVCWD = Pleasant Valley County Water District.

[a] 2,450 AFY between 1985 and 2002 accounts for riparian water rights holders' use of Conejo Creek water prior to development of CWD's Diversion Facility and non-potable surface water system. Between 2003 and 2006, deliveries are less than previous assumptions as not all riparian customers had connected to the CWD non-potable system. It is fair to assume the difference between those volumes and 2,450 were still applied to land.

[b] For water supplied by CWD to PVCWD, 56% is used in the Oxnard Subbasin and 44% in the PVB.

Notes:

1) Well labels consist of an italicized abbreviated State Well Number (SWN) and a groundwater elevation beneath it. SWNs are based on Township and Range in the Public Land Survey System. To construct a full SWN from the abbreviation shown on the map, concatenate the Township, Range, abbreviation, and the letter "S". Example: the SWN for the well labeled "15L01" located in Township 02N (T02N) and Range 22W (R22W) is 02N22W15L01S. Geotracker wells do not have SWN IDs and so are not labeled.

2) "NM" indicates no water level measurement was collected within the specified time window.

3) Groundwater elevations not used to create contours are shown in parentheses.

4) All elevation values are in feet above mean sea level (ft AMSL).

5) Aquifer designation information for individual wells was provided by FCGMA, CMWD and UWCD.

Notes:

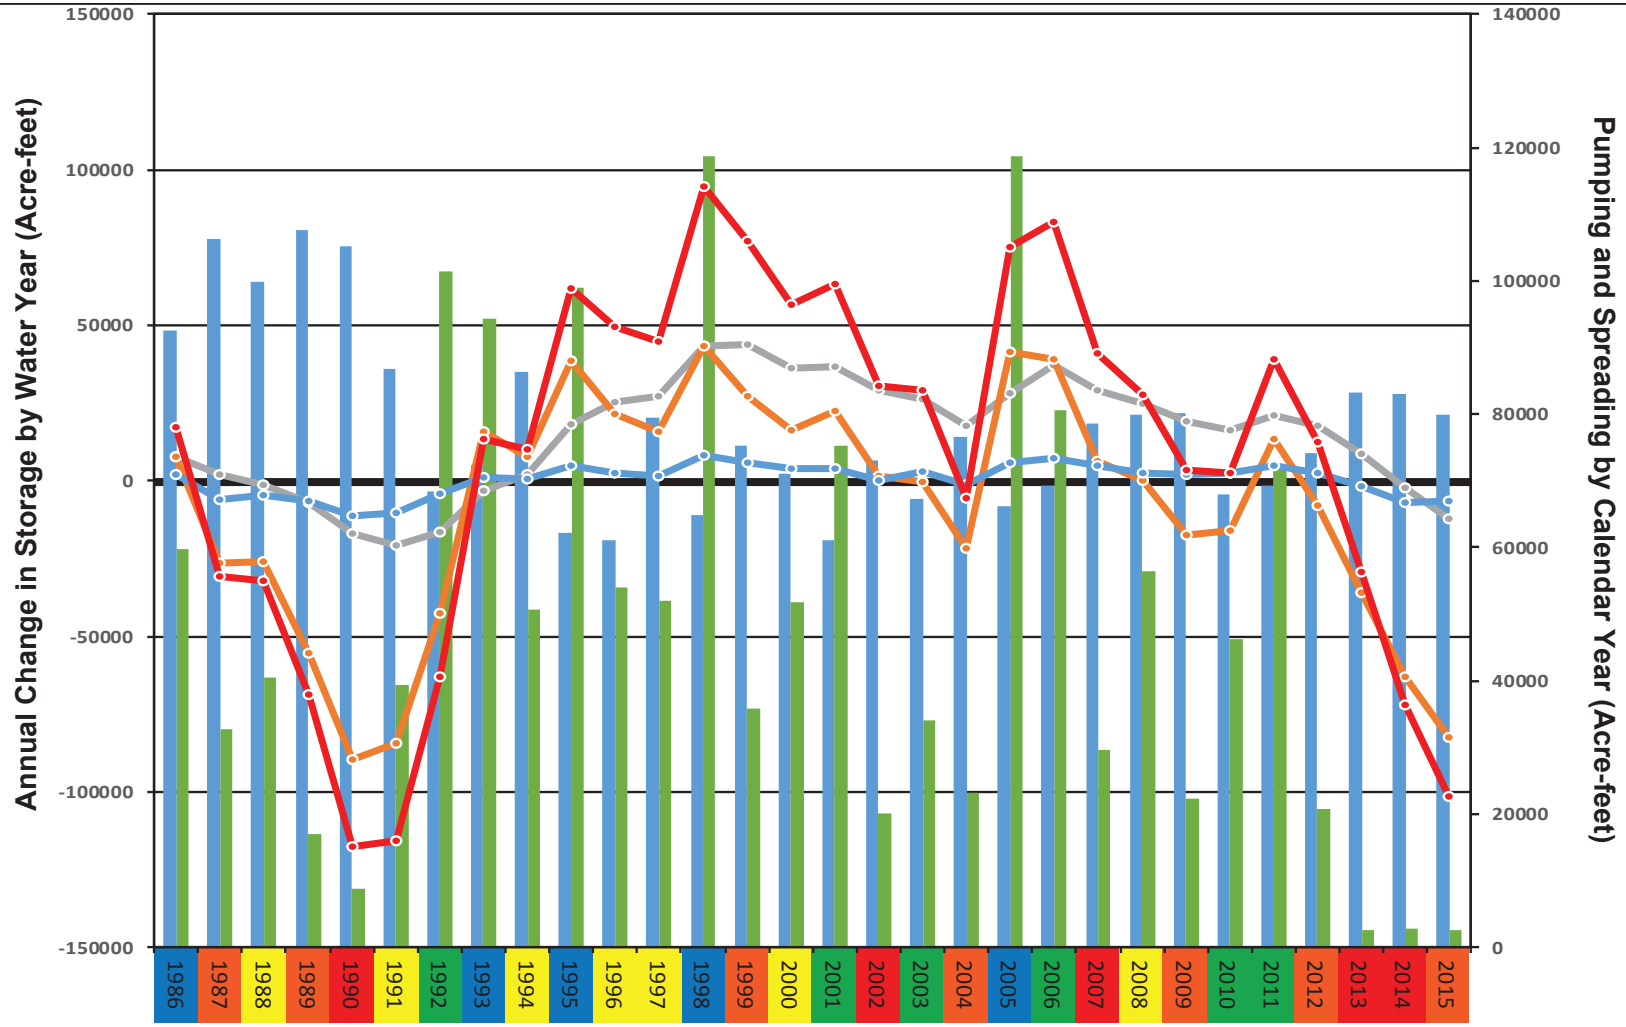
1) Estimated Annual Change in Storage is from the United Water Conservation District (UWCD) numerical groundwater model report from July 2018. Estimated Change in Storage is the sum of the Change in Storage from all aquifers in the basin included in the UWCD numerical groundwater model.

2) Water year is October 1 to September 30 (e.g., water year 2012 is from October 1, 2011, to September 30, 2012)



3) Water year type is based on the percentage of the water year precipitation compared to the 30-year precipitation average. Types are defined as Wet (≥150% of average), Above Normal (≥100% to <150% of average), Below Normal (≥75% to <100% of average), Dry (≥50% to <75% of average), and Critical (<50% of average).

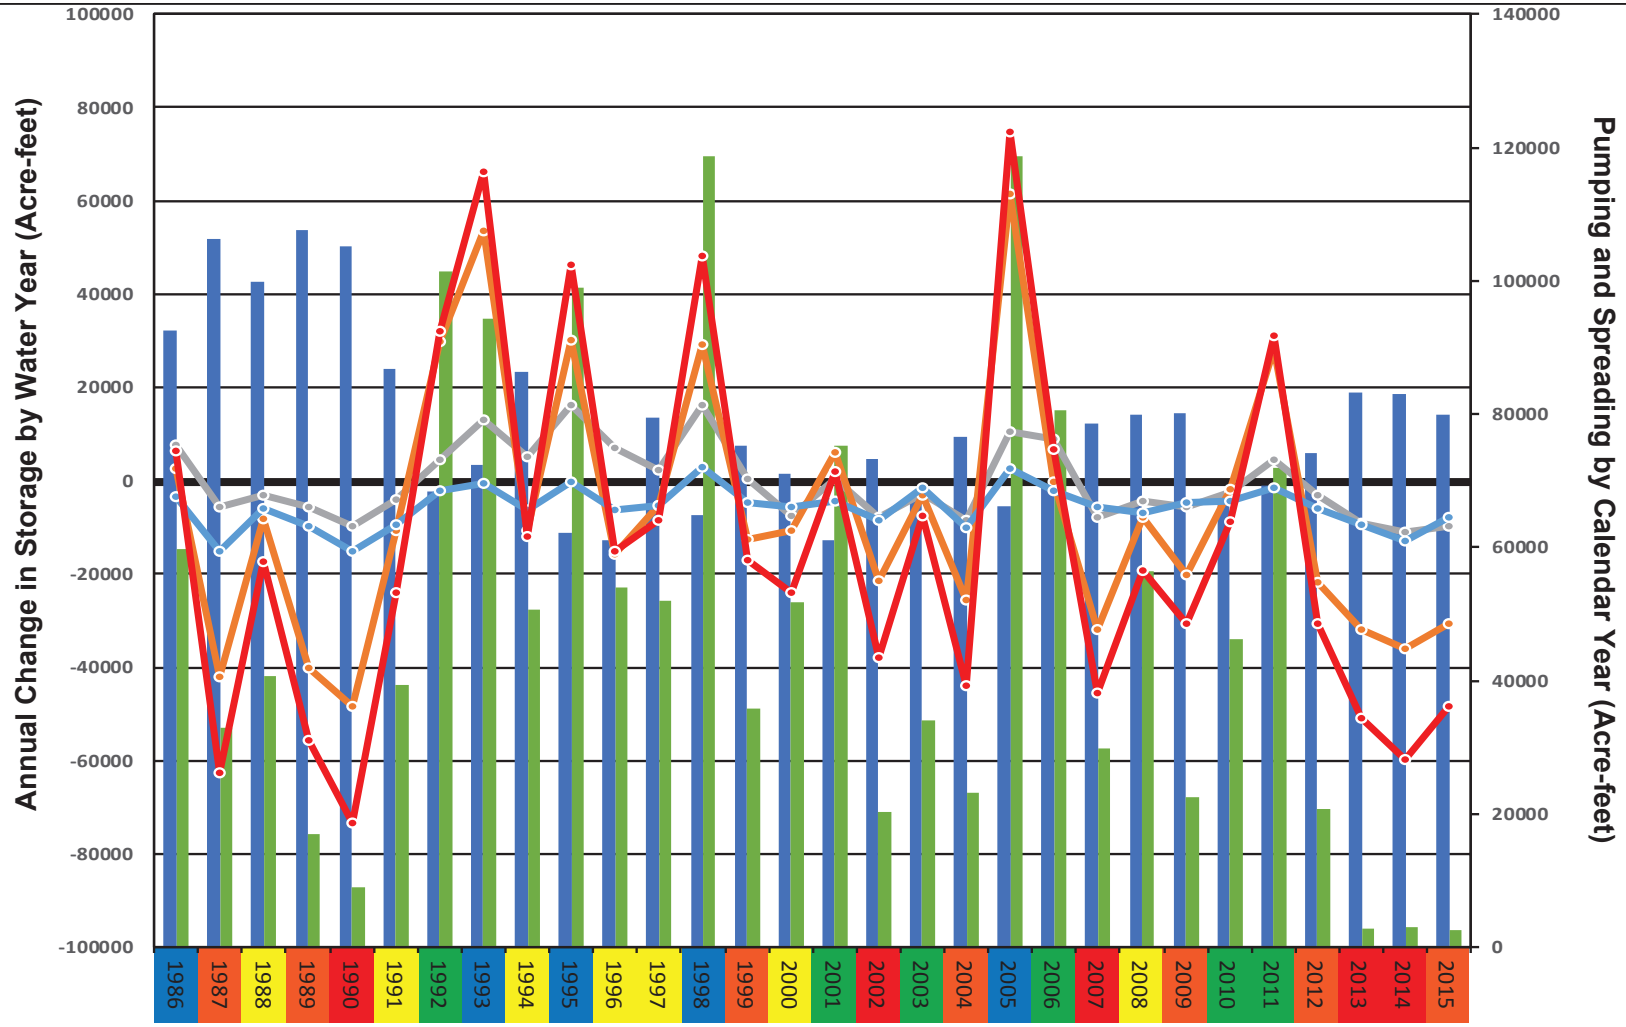
2) Water year is October 1 to September 30 (e.g., water year 2012 is from October 1, 2011, to September 30, 2012)



3) Water year type is based on the percentage of the water year precipitation compared to the 30-year precipitation average. Types are defined as Wet (≥150% of average), Above Normal (≥100% to <150% of average), Below Normal (≥75% to <100% of average), Dry (≥50% to <75% of average), and Critical (<50% of average).

DUDEK

FIGURE 2-23

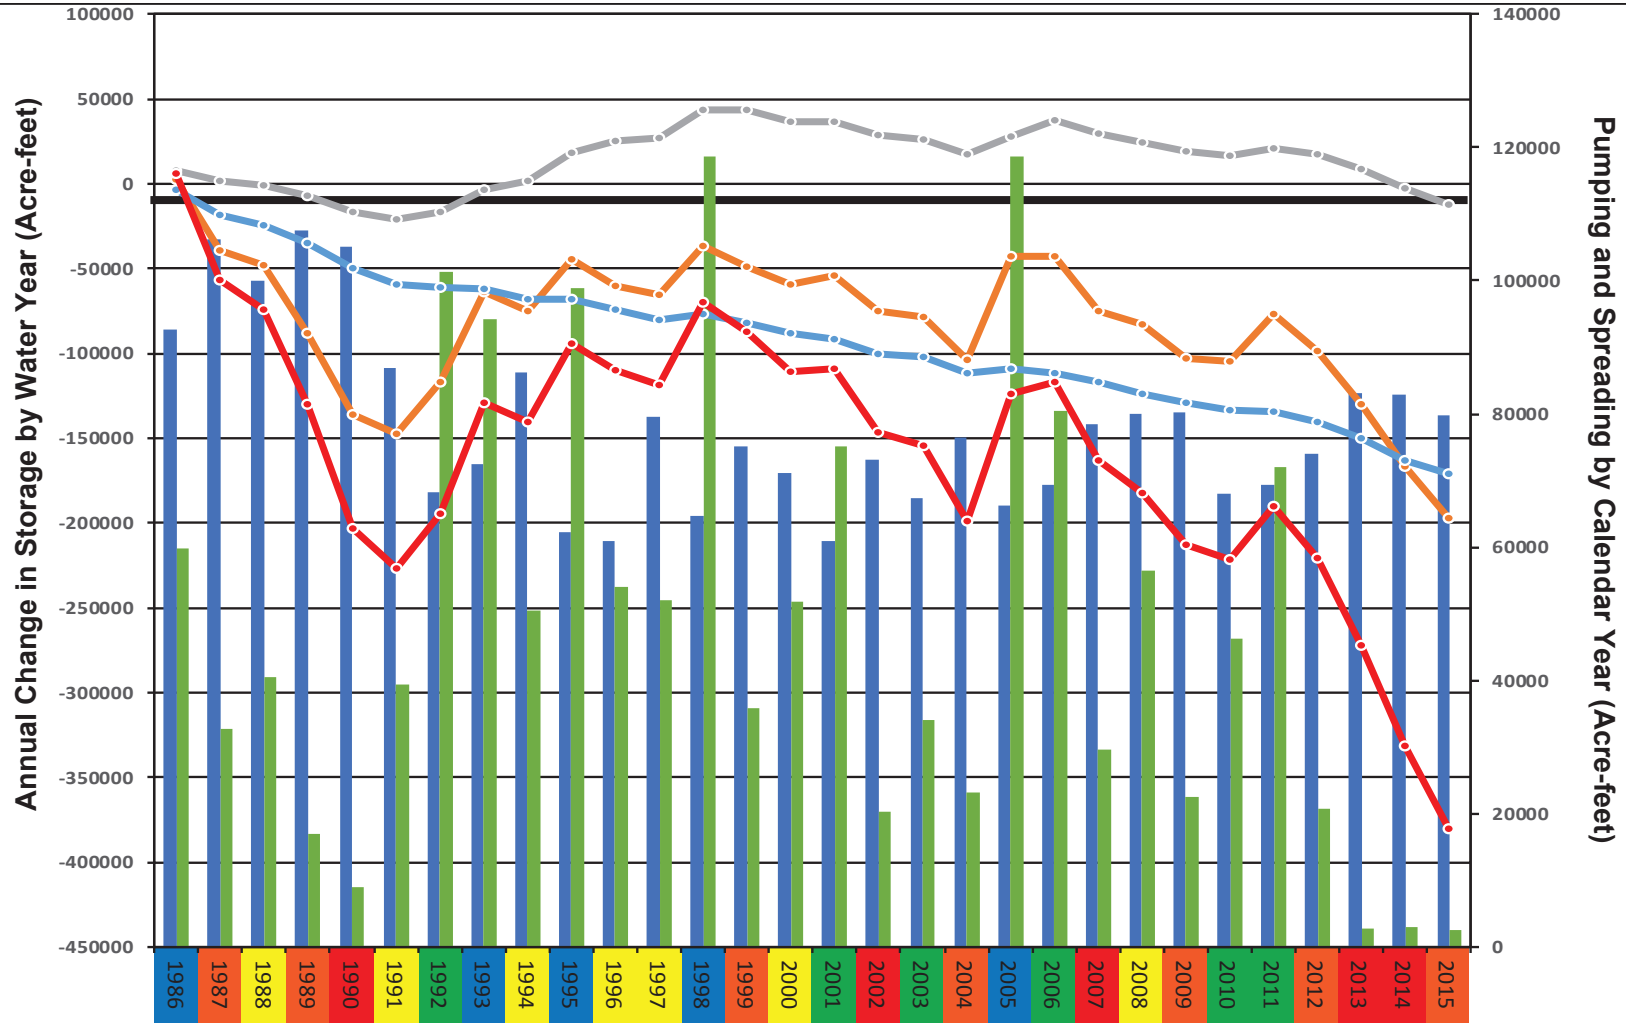
Oxnard Subbasin Cumulative Change in Storage

INTENTIONALLY LEFT BLANK

Notes:

1) Estimated Annual Change in Storage is from the United Water Conservation District (UWCD) numerical groundwater model report from July 2018. Estimated Change in Storage is the sum of the Change in Storage from all aquifers in the basin included in the UWCD numerical groundwater model.

2) Water year is October 1 to September 30 (e.g., water year 2012 is from October 1, 2011, to September 30, 2012)



3) Water year type is based on the percentage of the water year precipitation compared to the 30-year precipitation average. Types are defined as Wet (≥150% of average), Above Normal (≥100% to <150% of average), Below Normal (≥75% to <100% of average), Dry (≥50% to <75% of average), and Critical (<50% of average).

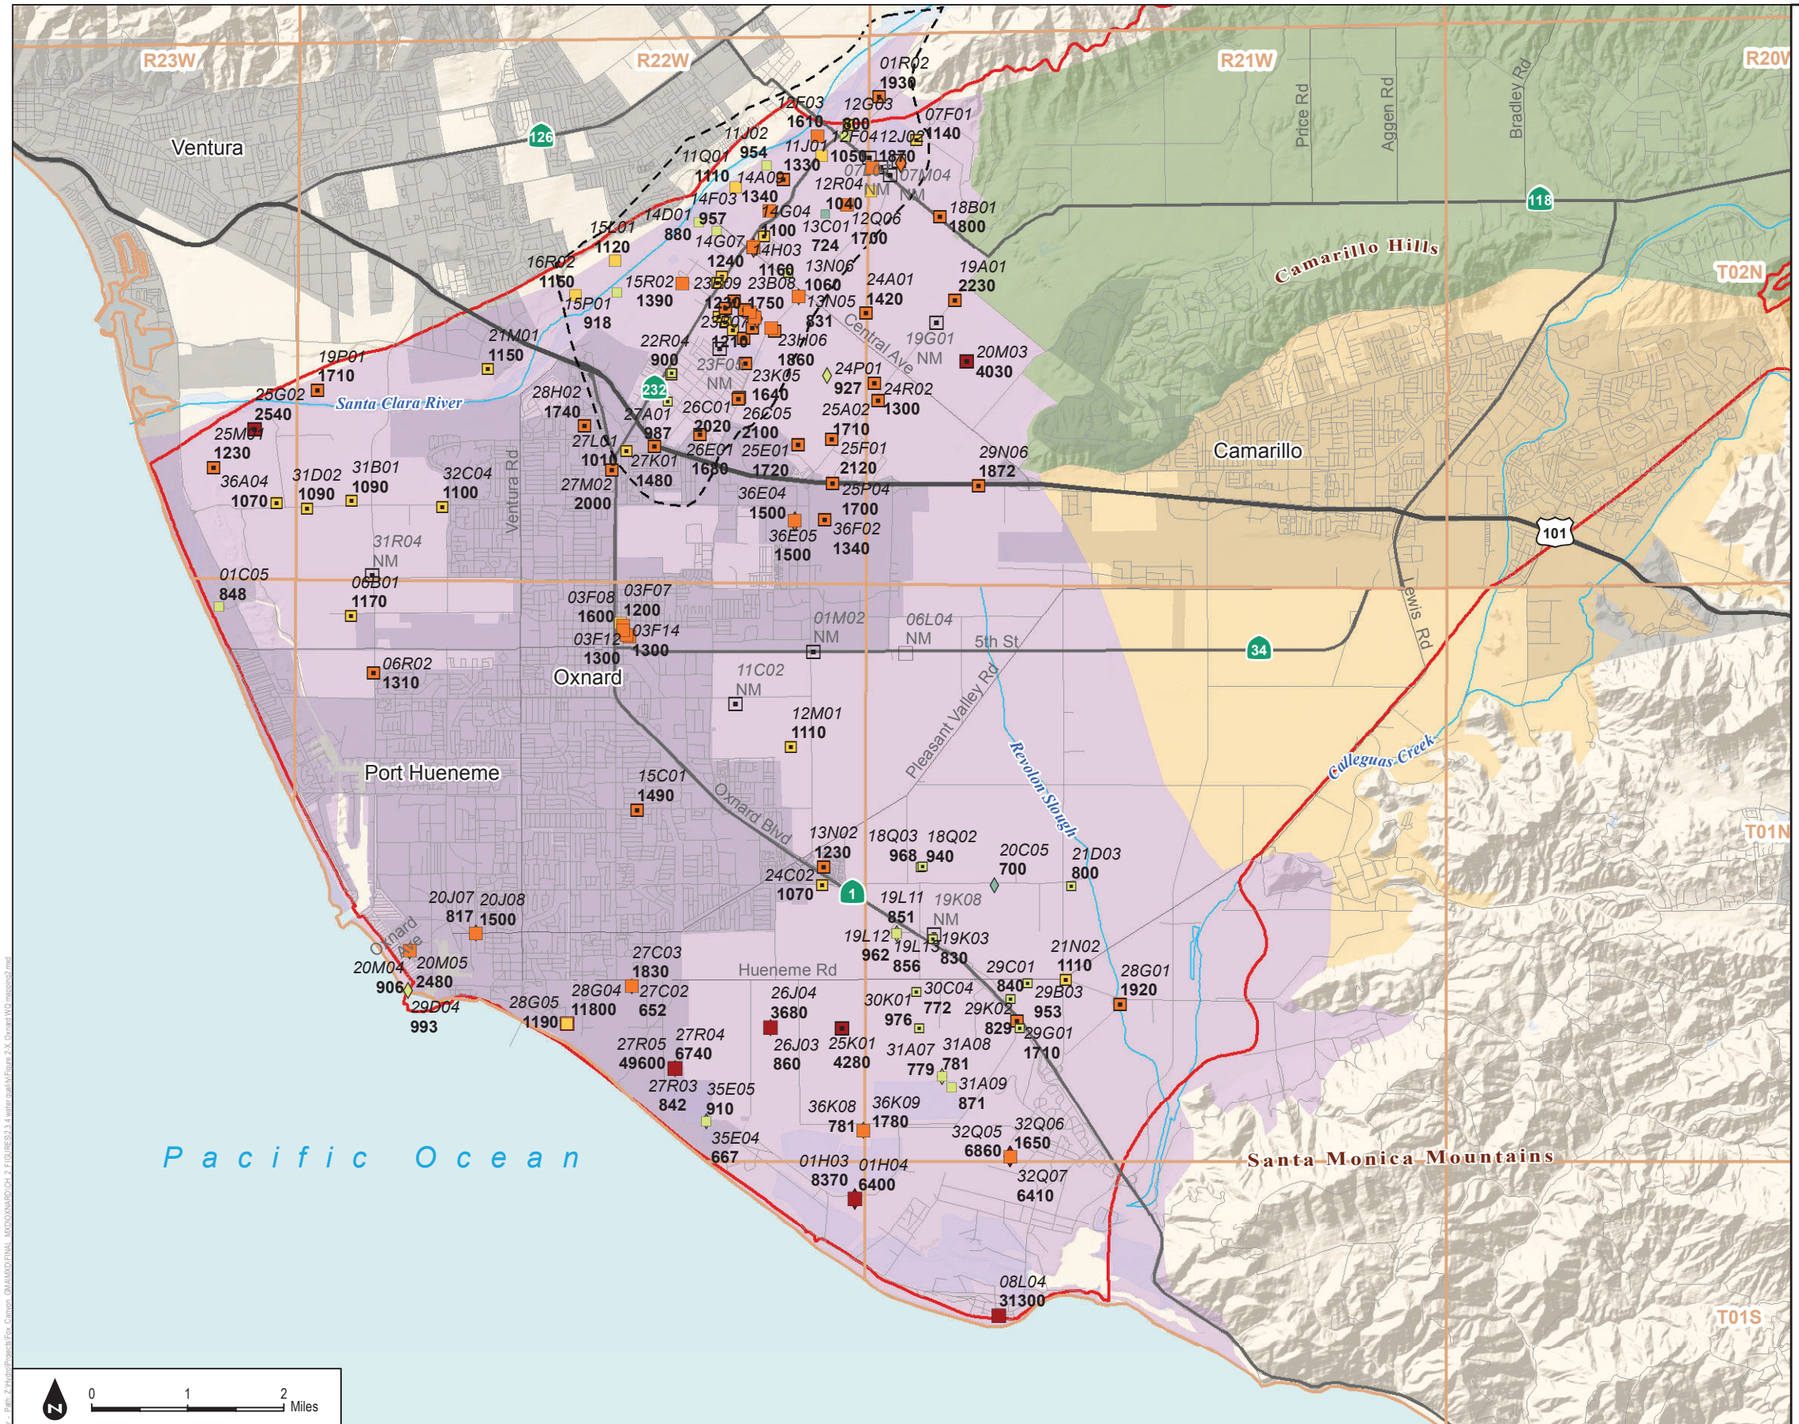
- Pleasant Valley (4-006)
- Oxnard (4-004.02)

15P01 Abbreviated State Well Number (see notes)



Notes:
1) Single well labels consist of an italicized abbreviated State Well Number (SWN). SWNs are based on Township and Range in the Public Land Survey System. To construct a full SWN from the abbreviation shown on the map, concatenate the Township, Range, abbreviation, and the letter "S". Example: the SWN for the well labeled "20E01" located in Township 01N (T01N) and Range 22W (R22W) is 01N22W20E01S.
2) Labels for nested well sets indicate the range of the last two digits in the SWNs completed in each set. Example: The SWNs completed in the nested set labeled "01H01-04," located in Township 01S (T01S) and Range 22W (R22W) are 01S22W01H01S, 01S22W01H02S, 01S22W01H03S, and 01S22W01H04S.
3) Aquifer designation information for individual wells was provided by FCGMA, CMWD and UWCD.

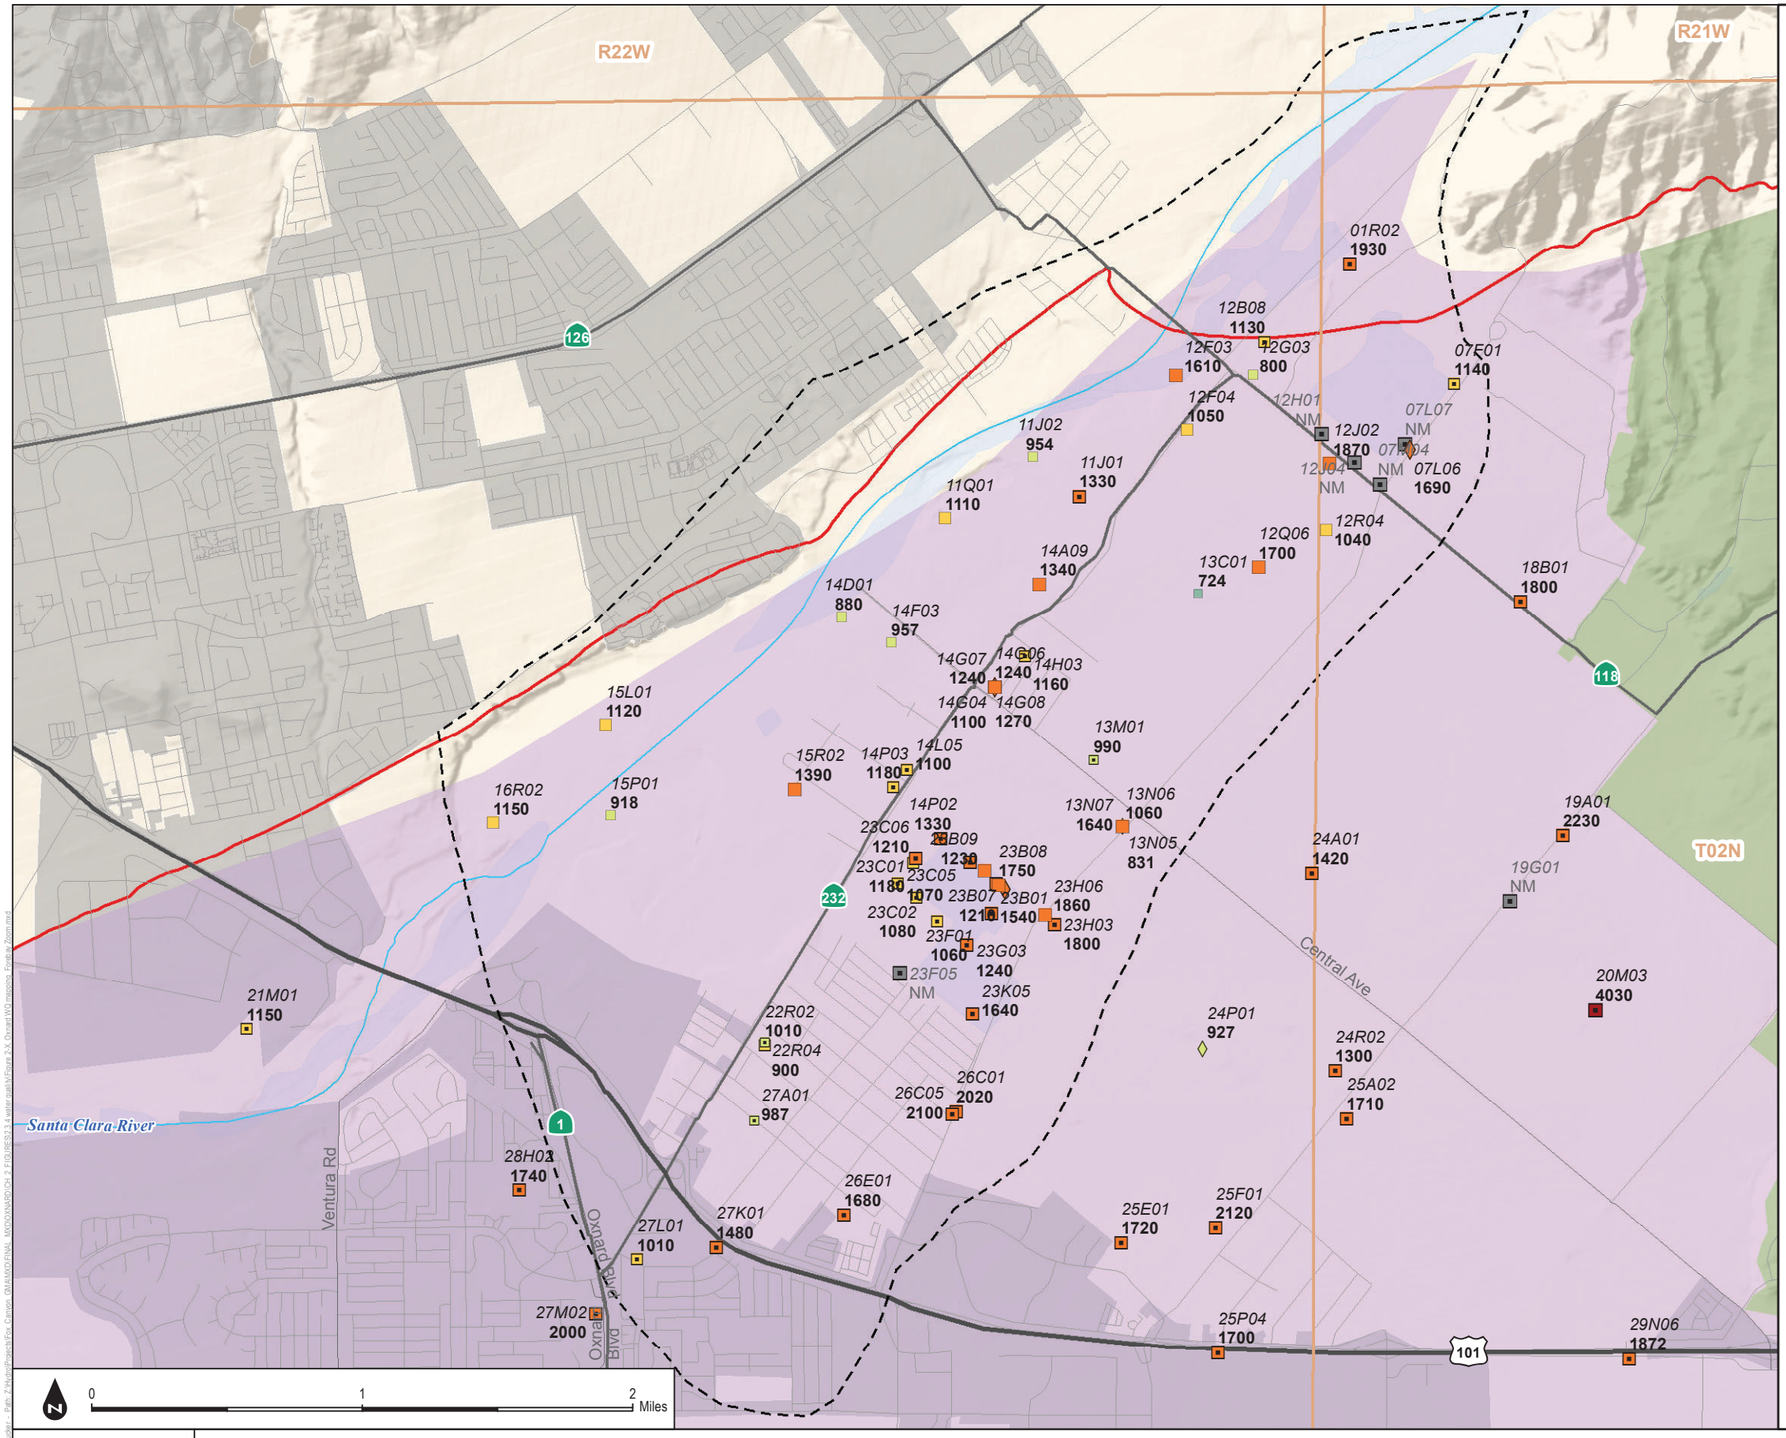
Aquifer designation

- Well screened in the Oxnard aquifer
- Well screened in the Mugu aquifer
- Wells screened in multiple aquifers in the UAS

15P01 Abbreviated State Well Number (see notes)
10.5 Concentration (mg/L)

Notes:


1) Well labels consist of an italicized abbreviated State Well Number (SWN) and a concentration value beneath it.The concentration is the most recent concentration measured in water quality samples collected at that well in the five years from 2011-2015. For a complete water quality record for each well, see Appendix X.
2) "ND" signifies non-detect.
3) SWNs are based on Township and Range in the Public Land Survey System. To construct a full SWN from the abbreviation shown on the map,concatenate the Township, Range, abbreviation, and the letter "S". Example: the SWN for the well labeled "15L01" located in Township 02N (T02N) and Range 22W (R22W) is 02N22W15L01S.
4) The shape of each well symbol correspondsto the aquifer(s) in which it is screened (see above).
5) The color of each well symbol corresponds to the most recent concentration measured in a water quality sample from that well.
6) All concentrations are in mg/L.
7) Aquifer designation information for individual wells was provided by FCGMA, CMWD and UWCD.

CHAPTER 3
SUSTAINABLE MANAGEMENT CRITERIA

3.1 INTRODUCTION TO SUSTAINABLE MANAGEMENT CRITERIA

In the Oxnard Subbasin, significant and unreasonable seawater intrusion is the primary undesirable result that occurs when groundwater production exceeds the sustainable yield. This undesirable result can occur even if groundwater production from the Subbasin as a whole is less than the freshwater recharge to the Subbasin, as seawater intrusion is closely related to groundwater production from coastal wells. Infrastructure projects and management actions undertaken in the Oxnard Subbasin have at times limited and even reversed the progress of seawater intrusion (see Section 2.3.3, Seawater Intrusion). However, groundwater elevations declined in all aquifers in the Subbasin in response to the statewide drought that began in 2011. These groundwater elevation declines exacerbated the impacts of seawater intrusion in the Subbasin.

On October 28, 2015, after several consecutive years of drought, the Fox Canyon Groundwater Management Agency (FCGMA) Board of Directors (Board) adopted planning goals for the Oxnard Subbasin, as well as the other basins within its jurisdiction. These goals are as follows:

- Control saline water impact front at its current position.
- Do not allow groundwater quality to further degrade without mitigation.
- No net subsidence due to groundwater withdrawal.
- Promote water levels that mitigate or minimize undesirable results (including pumping trough depressions, surface water connectivity, and chronic lowering of water levels).

These goals guide the definition of undesirable results, minimum thresholds, and measurable objectives in the subsequent sections.

Groundwater elevations are the primary metrics by which progress toward meeting the sustainability goal in the Oxnard Subbasin will be measured. Sustainable management of the Oxnard Subbasin does not necessarily mean, however, that springtime high groundwater levels in the Subbasin remain the same year after year. Rather, sustainability can be achieved over cycles of drought and recovery, so long as the impacts to the Subbasin that may occur during periods of drawdown are not significant or unreasonable. Thus, year over year, groundwater levels may decline during a drought, but sustainable management will result in groundwater levels—and, by extension, chloride concentrations and land surface elevations—returning to pre-drought levels in the wet years after a drought.

3.2 SUSTAINABILITY GOAL

The primary sustainability goal in the Oxnard Subbasin is to increase groundwater elevations inland of the Pacific coast in the aquifers that compose the Upper Aquifer System (UAS) and the Lower Aquifer System (LAS) to elevations that will prevent the long-term, or climatic cycle net (net), landward migration of the 2015 saline water impact front (see Section 3.3.3); prevent net seawater intrusion in the UAS; and prevent net seawater intrusion in the LAS.

The use of net landward migration, and net seawater intrusion in the sustainability goal reflects that climatic cycles influence groundwater elevations over multi-year periods and requires that assessment of seawater impacts to the Subbasin be tied to a time period over which net impacts are measured. This Groundwater Sustainability Plan (GSP) assesses net impacts to the Oxnard Subbasin over both a 50-year period beginning in 2020, and a 30-year period beginning in 2040. Undesirable results may occur in the Subbasin between 2020 and 2039, as progress is made toward sustainable management. By 2040, however, management of the Subbasin should achieve the sustainability goal. The 30-year period from 2040 through 2069 is referred to as the sustaining period in this GSP, as it is the period on which the evaluation of sustainability is based.

In order to achieve the sustainability goal, groundwater production will need to be reduced relative to historical groundwater production rates. At the same time, groundwater production inland from the coast may be allowed to increase as infrastructure is developed to convey inland production to agricultural users on the coast. During the first 5 years following GSP adoption, it is anticipated that the combined groundwater production from both the UAS and the LAS will begin to be reduced toward the estimated sustainable yield, accounting for the uncertainty assessed in the model water budget and sustainable yield predictions (Section 2.4, Water Budget).

Proposed reductions in groundwater production must take into account the potential economic disruption to the agricultural industry in the Subbasin, the interference with municipal water supply planning and rate setting, and the uncertainty in the estimated sustainable yield of the Subbasin. The estimated sustainable yield of the Subbasin is 42,000 acre-feet per year (AFY) with an uncertainty estimate of ±9,000 AFY (see Section 2.4.4, General Uncertainties in the Water Budget). The average 2015 groundwater production rate was 69,000 AFY. The difference between the upper estimate of the sustainable yield, 51,000 AFY, and the 2015 production rate is 18,000 AFY. If production is reduced linearly between 2020 and 2040, the estimated groundwater production reduction necessary throughout the geographic extent of the Oxnard Subbasin is approximately 900 AFY. However, the sustainability goal allows for operational flexibility, as groundwater production patterns are anticipated to change during the 20-year GSP implementation period from 2020 through 2039. Progress toward the sustainability goal will be evaluated throughout the 20-year implementation period.

The following sections describe the undesirable results that have occurred and may occur within the Subbasin, the minimum thresholds developed to avoid undesirable results, and the measurable objectives that account for the need to continue groundwater production during drought cycles and the associated interim milestones to help gauge progress toward sustainability over the next 20 years.

3.3 UNDESIRABLE RESULTS

Under the Sustainable Groundwater Management Act (SGMA), undesirable results occur when the effects caused by groundwater conditions occurring throughout the Subbasin cause significant and unreasonable impacts to any of the six sustainability indicators. These sustainability indicators are as follows:

- Chronic lowering of groundwater levels
- Reduction of groundwater storage
- Seawater intrusion
- Degraded water quality
- Land subsidence
- Depletions of interconnected surface water

The definition of what constitutes a significant and unreasonable impact for each sustainability indicator is determined by the Groundwater Sustainability Agency, which is FCGMA in the Oxnard Subbasin, using the processes and criteria set forth in the GSP. Each of the sustainability indicators is discussed in this section in the context of undesirable results.

3.3.1 Chronic Lowering of Groundwater Levels

Chronic lowering of groundwater levels resulting in a significant and unreasonable depletion of supply is an undesirable result applicable to the Oxnard Subbasin. Seawater intrusion occurs in the Subbasin as groundwater levels fall below threshold elevations that maintain sufficient hydrostatic pressure to keep seawater from moving landward. The threshold groundwater elevations differ between the aquifers of the UAS and the LAS, as well as with geographic location in the Subbasin. Groundwater elevation declines can also induce release of connate water brines, reduce the quantity of freshwater in storage, and cause land subsidence in the Subbasin.

The primary cause of groundwater conditions in the Subbasin that would lead to chronic lowering of groundwater levels is groundwater production in excess of natural and artificial recharge. Groundwater production from the Subbasin may result in significant and unreasonable lowering of groundwater levels if the groundwater levels were lowered to an elevation at which they allow net seawater intrusion in the UAS and LAS over climate cycles of drought and recovery. Historically, this condition has occurred within the Oxnard Subbasin.

In the past, groundwater levels in the UAS have declined during periods of drought and recovered during wet periods (Section 2.3.1, Groundwater Elevation Data). In fact, flowing artesian conditions were observed in UAS wells after multiple-year periods of above-average precipitation (UWCD 2016; Appendix C, UWCD Model Report, to this GSP). Groundwater levels in the LAS have also declined during drought and risen during wet periods, although the water levels in many wells in the LAS have remained below sea level since the 1980s (Section 2.3.1). One factor that contributed to the recovery of water levels following periods of drought was the amount of surface water that was diverted from the Santa Clara River and infiltrated through spreading basins to recharge the aquifers. Surface-water flows are available during wetter-than-average precipitation periods. These surface-water diversions and spreading are controlled by the United Water Conservation District (UWCD), which anticipates maintaining the historical volume of water diverted from the Santa Clara River over the next 50 years (UWCD 2018).

In addition to surface-water spreading, seawater intrusion into the aquifers of the Oxnard Subbasin has also sustained groundwater levels. Unlike surface-water spreading, seawater intrusion sustains groundwater levels at the expense of freshwater storage in the Subbasin (Section 2.3.3). Water levels in the aquifers of the LAS have remained below sea level even during drought recovery periods, thereby continuing to allow migration of seawater into the Subbasin near the Mugu and Hueneme Submarine Canyons (Section 2.3, Groundwater Conditions). Continued seawater intrusion has reduced the amount of freshwater in storage in the Subbasin.

Based on the sustainability goals for the Oxnard Subbasin, the criterion used to define undesirable results for chronic lowering of groundwater levels is landward migration of the 2015 saline water impact front during the sustaining period from 2040 through 2069. It is expected that there will be some landward migration of this front between 2020 and 2040 as the FCGMA Board and stakeholders in the Subbasin undertake the necessary projects and management actions toward achieving sustainability in 2040. The minimum thresholds metric against which chronic lowering of groundwater levels will be measured is groundwater levels that were selected to prevent net landward migration of the 2015 saline water impact front, and net seawater intrusion over the 30-year sustaining period from 2040 through 2069. These groundwater elevations are higher than previous historical low water levels, many of which were measured in the fall of 2015 (Table 3-1; Figures 3-1 through 3-5, Minimum Thresholds and Groundwater Elevation Contours).

In order to effectively manage the groundwater resources of the Oxnard Subbasin, the Subbasin has been divided into five management areas (see Section 2.5, Management Areas; Figure 2-69, Oxnard Subbasin Management Areas). These areas are defined by differences in their hydrogeologic properties, groundwater quality, or historical groundwater elevations. Groundwater elevations within each management area will be used to determine whether significant and unreasonable chronic lowering of groundwater levels is occurring. All of the management areas except the East Oxnard Plain Management Area (EOPMA) have wells in which water levels can be monitored by aquifer.

Until a monitoring well is installed in the EOPMA, the water level thresholds set for the wells closest to the EOPMA are presumed to be protective for the EOPMA, which has considerably less groundwater production than the adjoining management areas. This presumption will be revisited as groundwater elevation data are collected from the EOPMA.

Chronic lowering of groundwater levels in the Oxnard Subbasin has the potential to impact the beneficial uses and users of groundwater in the Subbasin by (1) exacerbating seawater intrusion in the Subbasin, (2) reducing the volume of freshwater in storage, (3) potentially causing land subsidence, (4) impacting areas of interconnected surface water and groundwater, and (5) causing groundwater levels to drop below current well screens.

3.3.2 Reduction of Groundwater Storage

Significant and unreasonable reduction of groundwater storage is an undesirable result that applies to the Oxnard Subbasin. Seawater intrusion occurs in the Subbasin as groundwater levels fall below threshold levels that maintain sufficient hydrostatic pressure to keep seawater from moving landward. The threshold groundwater levels differ between the UAS and the LAS, and differ with geographic location in the Subbasin.

The primary cause of groundwater conditions in the Subbasin that would lead to reduction in groundwater storage is groundwater production in excess of recharge over a cycle of drought and recovery. Groundwater production from the Subbasin may result in a significant and unreasonable reduction of groundwater in storage if the volume of water produced from the Subbasin exceeds the volume of freshwater recharging the Subbasin over cycles of drought and recovery. Changes in groundwater in storage can be tracked using groundwater elevations and would become significant and unreasonable if groundwater levels were lowered to an elevation below which they allow landward migration of the 2015 saline water impact front over cycles of drought and recovery, which would cause a long-term decline in groundwater storage.

Numerical groundwater model simulations indicate that there has been approximately 101,000 acre-feet (AF) of storage loss in the Oxnard Subbasin over the 31 years from 1985 to 2015 (Section 2.3.2, Estimated Change in Storage; Appendix C). The model results also indicate that between 1985 and 2015, approximately 380,000 AF of seawater intruded into the UAS and LAS under the Oxnard Subbasin. The replacement of freshwater with seawater is a reduction in freshwater storage and is an undesirable result that has already occurred within the Subbasin.

Based on the sustainability goals for the Oxnard Subbasin, the criterion used to define undesirable results for reduction in groundwater storage is landward migration of the 2015 saline water impact front after 2040. The minimum thresholds metric against which reduction of groundwater storage will be measured is water levels that were selected to prevent net landward migration of the 2015 saline water impact front, and net seawater intrusion after 2040. These groundwater elevations are higher than previous historical low water levels (Table 3-1).

Groundwater elevations within each management area of the Oxnard Subbasin will be used to determine whether significant and unreasonable reduction of groundwater in storage is occurring. All of the management areas except the EOPMA have wells in which water levels can be monitored by aquifer. Until a monitoring well is installed in the EOPMA, the water level thresholds set for the wells closest to the EOPMA are presumed to be protective for the EOPMA, which has considerably less groundwater production than the adjoining management areas. This presumption will be revisited as groundwater elevation data are collected from the EOPMA.

Reduction of groundwater storage in the Oxnard Subbasin has the potential to impact the beneficial uses and users of groundwater in the Subbasin by limiting the volume of groundwater available for agricultural, municipal, industrial, domestic, and environmental. These impacts will affect all users of groundwater in the Subbasin.

3.3.3 Seawater Intrusion

Significant and unreasonable seawater intrusion is an undesirable result that is present or likely to occur in the Oxnard Subbasin. Seawater intrusion is the primary sustainability indicator in the Oxnard Subbasin. Seawater intrusion occurs in the Subbasin as groundwater levels fall below threshold levels that maintain sufficient hydrostatic pressure to keep seawater from moving landward. The threshold groundwater levels differ between the UAS and the LAS, and differ with geographic location in the Subbasin.

The primary cause of groundwater conditions in the Subbasin that would lead to seawater intrusion is groundwater production. Currently, the area of the Subbasin impacted by concentrations of chloride greater than 500 milligrams per liter (mg/L) is generally west of Highway 1 and south of Hueneme Road. Sources of water high in chloride in the Oxnard Subbasin include modern seawater as well as non-marine brines and connate water in fine-grained sediments (see Section 2.3.3). Therefore, this area is referred to as the "saline water impact area," rather than the "seawater intrusion impact area," to reflect all the potential sources of chloride to the aquifers in this area. The saline water impact area was already impacted before 2015, when SGMA was implemented. As a result, the goal of this GSP is not to reverse historical impacts, but rather to limit seawater intrusion to the area that has already been impacted. Therefore, significant and unreasonable seawater intrusion is defined as seawater intrusion that results in a net landward migration of the 2015 saline water impact front beyond the already impacted area west of Highway 1 and south of Hueneme Road from 2040 through 2069.

Chloride concentrations in the Oxnard Subbasin indicate that seawater intrusion has occurred historically, and is currently occurring, in the vicinity of Point Hueneme and Point Mugu. However, seawater is not the only source of chloride to the groundwater of the Oxnard Subbasin (Section 2.3.3, Groundwater Conditions, and Section 2.3.4, Groundwater Quality). Chloride

concentrations exceeding 500 mg/L have been measured in the southeastern part of the Subbasin, where there is no direct connection between the inland freshwater aquifer and the Pacific Ocean. Stable isotope studies of the groundwater in these wells have shown that the chloride concentrations are likely not a result of seawater intrusion, but rather originated from release of connate water in the fine-grained lagoonal deposits in the Oxnard and Mugu Aquifers (Izbicki 1996). The connate water is released as groundwater head in the aquifer declines and the fine-grained deposits compress. Additionally, chloride concentrations in the UAS are also impacted by downward migration of brackish water from the semi-perched aquifer via improperly abandoned wells (Izbicki 1996). In the LAS, chloride concentrations above 500 mg/L result from seawater intrusion, as well as from upward migration of brines from the geologic formations that underlie and surround the Subbasin (Izbicki 1991).

The minimum thresholds metric against which seawater intrusion will be measured is water levels that were selected to prevent lateral seawater intrusion. These groundwater elevations are equal to, or higher than, previous historical low water levels (Table 3-1). Some of the minimum threshold groundwater elevations in the LAS are below sea level. These elevations were selected based on model results that indicate groundwater elevations could be this low and still limit seawater intrusion. They were also selected in concert with groundwater elevations in adjacent management areas, and are not expected to negatively impact the ability of the adjacent management areas to meet their sustainability goals.

The groundwater elevations selected in each of the management areas of the Oxnard Subbasin will be used to determine whether seawater intrusion is occurring in the Saline Intrusion Management Area and the West Oxnard Plain Management Area (WOPMA) of the Subbasin (Figure 2-69). Until a monitoring well is installed in the EOPMA, the water level thresholds set for the wells closest to the EOPMA in the WOPMA and the Oxnard Pumping Depression Management Area are presumed to be protective for the EOPMA, which has considerably less groundwater production than the adjoining management areas. This presumption will be revisited as groundwater elevation data are collected from the EOPMA.

Seawater intrusion in the Oxnard Subbasin has the potential to impact the beneficial uses and users of groundwater in the Subbasin by limiting the volume of non-brackish groundwater available for agricultural, municipal, industrial, and domestic use. These impacts will affect all users of groundwater in the Subbasin and continued seawater intrusion could result in changing land use as agricultural land is fallowed due to reduced groundwater supplies.

3.3.4 Degraded Water Quality

3.3.4.1 Chloride and TDS

Significant and unreasonable degraded water quality related to groundwater production is an undesirable result that has the potential to occur in the Oxnard Subbasin. Increases in chloride and total dissolved solids (TDS) have been observed in coastal areas of the Oxnard Subbasin including parts of the WOPMA and the Saline Intrusion Management Area. These increases are associated with seawater intrusion as well as connate water in fine-grained lenses, downward migration of brines from improperly abandoned wells, and upward migration of brines from deeper geologic formations (Izbicki 1991, 1996; UWCD 2016).

Degradation of groundwater quality from increased concentrations of chloride and TDS has the potential to impact the beneficial uses and users of groundwater in the Subbasin by (1) limiting the volume of groundwater available for agricultural, municipal, industrial, and domestic use or (2) requiring construction of treatment facilities to remove the constituents of concern.

The primary cause of groundwater conditions in the Subbasin that would lead to degradation of water quality from increased concentrations of TDS and chloride is groundwater production. If groundwater production from the Subbasin results in expansion of areas of the Subbasin impacted by chloride and TDS concentrations that limit agricultural and potable use, significant and unreasonable degradation of water quality may occur.

Based on the sustainability goals for the Oxnard Subbasin, the criterion used to define undesirable results for degraded water quality is the migration of the 2015 saline water impact front during the sustaining period from 2040 through 2069. The minimum thresholds metric against which degradation of water quality will be measured is groundwater levels that were selected to prevent net landward migration of the 2015 saline water impact front. The minimum thresholds metric against which seawater intrusion will be measured is groundwater levels that were selected to prevent net landward seawater migration. These groundwater elevations are equal to, or higher than, previous historical low water levels (Table 3-1).

Water quality will continue to be monitored at monitoring well locations identified by FCGMA and its partner agencies, as identified in Chapter 4, Monitoring Networks. As additional data are collected, the effectiveness of applying a water level proxy to groundwater quality degradation will continue to be assessed.

3.3.4.2 Nitrate

In the Oxnard Forebay area of the Oxnard Subbasin, nitrate concentrations above the water quality objectives (WQOs) and basin management objectives (BMOs) are routinely detected in

groundwater (UWCD 2008). These concentrations have resulted in significant and unreasonable impacts to beneficial uses and users of the Oxnard Subbasin, as not all municipal users of groundwater in this area have the ability to blend groundwater with nitrate exceeding the federal maximum contaminant level (MCL) with other water to sufficiently reduce the nitrate concentration for municipal use. Although nitrate concentrations in the Forebay have impacted municipal users of groundwater, the concentrations of nitrate in the Forebay are not caused by groundwater conditions occurring throughout the Subbasin. Rather, nitrate concentrations above WQOs and BMOs in the Forebay are likely a legacy of historical septic discharges and agricultural fertilizer application practices.[1]

Although nitrate concentrations decrease when water levels are high, the decreases are not a result of regional groundwater production patterns. Instead, the reduction in nitrate concentration results from dilution of nitrate in groundwater by lower nitrate concentration surface-water recharge from the Santa Clara River. Operationally, in years when surface-water diversions are lower than the overall demand, UWCD prioritizes surface-water recharge in areas where nitrate concentrations in the groundwater exceed the MCL over deliveries to areas with lower concentrations of nitrate in the groundwater. UWCD currently anticipates maintaining and potentially increasing surface-water recharge from the Santa Clara River in the future. Increases in surface-water recharge, combined with the cessation of septic discharges and modern agronomic fertilization practices, are anticipated to result in long-term declines in nitrate concentration in the Forebay.

Because nitrate concentrations are not impacted by local or regional groundwater production, and the currently impacted area is not anticipated to get larger in the future, the concentration of nitrate is not considered to be a SGMA sustainability indicator in the Subbasin. Because nitrate impacts are not a sustainability indicator, no minimum threshold concentration for nitrate is proposed at this time. Nitrate concentrations will continue to be monitored and the relationship between groundwater production and nitrate concentrations will be reevaluated during the 5-year evaluation.

3.3.5 Land Subsidence

The undesirable result associated with land subsidence in the Oxnard Subbasin is subsidence that substantially interferes with surface land uses. The FCGMA Board resolution discussed in Section 3.1, Introduction to Sustainable Management Criteria, calls for groundwater management that will not result in net subsidence due to groundwater withdrawal. Subsidence related to groundwater withdrawal can occur as groundwater elevations decline below previous historical low water levels, because the groundwater acts to reduce the effective stress, or pressure, on the sediments in the aquifers. As water levels decline, the pressure on the sediment matrix increases, and the pore structure of the sediment can collapse, resulting in subsidence. The minimum thresholds metric

[1] Ventura County extended sewer lines into this area in the years between 2000 and 2011 to address additional discharges of nitrate.

against which subsidence will be measured is water levels that were selected to prevent lateral seawater intrusion. These groundwater elevations are equal to, or higher than, previous historical low water levels, which will limit the potential for future land subsidence in the Subbasin resulting from groundwater withdrawal (Table 3-1).

Groundwater production is only one cause of subsidence in the Oxnard Subbasin. In addition to groundwater production, tectonic forces and oil and gas production can also result in subsidence in the Oxnard Subbasin (Section 2.3.5, Subsidence). Currently there are no monitoring stations that separate the effects of groundwater withdrawal from those of the other causes of subsidence.

Groundwater production from the Subbasin may result in significant and unreasonable land subsidence if the subsidence "substantially interferes with surface land uses" (California Water Code, Section 10721(x)(5)). Using this definition, historical records of land subsidence in the Subbasin do not indicate that land subsidence as a result of groundwater production has caused or is likely to cause undesirable results. Parts of the Oxnard Plain have experienced 2 to 3 feet of subsidence in the past, and future projections of subsidence indicate that areas within the Oxnard Plain may experience an additional 0.1 to 1 feet of subsidence by 2040 (Hanson et al. 2003; DWR 2014).

Land subsidence related to groundwater production has the potential to impact the beneficial uses and users of groundwater in the Oxnard Subbasin by interfering with surface land uses in a way that causes additional costs for releveling fields, replacing surface infrastructure, and otherwise interfering with surface land uses. Additional subsidence of 0.1 to 1 feet is not anticipated to substantially interfere with surface land uses in the Subbasin.

Even though substantial interference with land surface uses is not anticipated, actions to reduce groundwater production to a rate that avoids net seawater intrusion will mitigate future seawater intrusion as well as reducing the potential for additional subsidence in the Subbasin related to groundwater production.

3.3.6 Depletions of Interconnected Surface Water

The undesirable result associated with depletion of interconnected surface water in the Oxnard Subbasin is loss of groundwater-dependent ecosystem (GDE) habitat.

The primary cause of groundwater conditions in the Subbasin that would lead to depletion of interconnected surface water is groundwater production from the semi-perched aquifer. This unit is not currently considered a principal aquifer of the Oxnard Subbasin (Section 2.2.3, Principal Aquifers and Aquitards). Groundwater production from the semi-perched aquifer may result in depletion of interconnected surface water with significant and unreasonable adverse effects on beneficial uses of surface water if the groundwater levels were lowered to an elevation below which the vegetation in the existing GDEs could not access groundwater over a length of time

that negatively affected the health of the GDE. Historically, this condition has not occurred within the Oxnard Subbasin, because there has been very minor (<31 AFY) groundwater production from the semi-perched aquifer (Section 2.4.1.2, Imported Water Supplies).

Depletion of interconnected surface water in the Oxnard Subbasin is not currently occurring, as evidenced by lack of production, relatively stable groundwater elevations, and the need for tile drains in the semi-perched aquifer. Groundwater elevations will continue to be monitored in the semi-perched aquifer.

Depletion of interconnected surface water in the Oxnard Subbasin has the potential to impact the uses and users of groundwater in the Subbasin by lowering the groundwater table and negatively impacting the health of GDEs. If future projects involve the use of water from the semi-perched aquifer, depletion of interconnected surface water is possible, and significant and unreasonable impacts may occur. Reevaluation of the effects on existing and potential GDEs should be conducted in conjunction with the project approval process for any such future projects.

3.3.7 Defining Subbasin-Wide Undesirable Results

In order to better manage groundwater production and projects within the Oxnard Subbasin, the Subbasin has been divided into four management areas (Section 2.5, Management Areas). Groundwater production in each of the management areas occurs in both the UAS and LAS (Table 2-14, Oxnard Subbasin Groundwater Used). Although there are groundwater production wells screened in both the UAS and the LAS in the Oxnard Subbasin, there are a sufficient number of wells screened only in one of the two aquifer systems to be able to manage groundwater production in the Subbasin by aquifer system. In contrast, there are few production wells screened only within an individual aquifer in the Subbasin. Therefore, the discussion of Subbasin-wide undesirable results that follows has been separated by aquifer system, but not by individual aquifer.

Upper Aquifer System

Fifteen wells were selected as key wells in the UAS (Table 3-1).[2] Of these, three are in the Forebay Management Area, three are in the West Oxnard Plain Management Area, and nine are in the Saline Intrusion Management Area. None of the UAS key wells are located in the Oxnard Pumping Depression Management Area.

[2] Well 02N21W07L05 is screened in multiple aquifers, and has been assigned to the UAS for the purpose of defining undesirable results.

Undesirable results are defined in three ways for the UAS in the Oxnard Subbasin. The first is based on the total number of wells, independent of management area or aquifer. Under this definition, the UAS will be determined to be experiencing undesirable results if, in any single monitoring event, water levels in six of the 15 key wells are below their respective minimum thresholds.

The second definition of undesirable results for the UAS is based on the degree to which a single well exceeds a minimum threshold. Under this definition, the UAS would be determined to be experiencing an undesirable result if the groundwater elevation at any individual key well is below the historical low water level for that well.

The third definition of undesirable results for the UAS is based on the time over which a well may exceed the minimum threshold. Under this definition, the UAS would be determined to be experiencing an undesirable result if the water level in any individual key well was below the minimum threshold for either three consecutive monitoring events or three of five consecutive monitoring events. Monitoring events are scheduled to occur in the spring and fall of each year.

If conditions in the UAS meet any of the definitions of undesirable results listed above, the UAS would be considered to be experiencing undesirable results.

Lower Aquifer System

Nineteen wells were selected as key wells in the LAS (Table 3-1).[3] Of these, six are in the Forebay Management Area, five are in the West Oxnard Plain Management Area, six are in the Saline Intrusion Management Area, and two are in the Oxnard Pumping Depression Management Area.

Undesirable results are defined in three ways for the LAS in the Oxnard Subbasin. The first is based on the total number of wells, independent of management area or aquifer. Under this definition, the LAS will be determined to be experiencing undesirable results if, in any single monitoring event, water levels in 8 of the 19 key wells are below their respective minimum thresholds.

The second definition of undesirable results for the LAS is based on the degree to which a single well exceeds a minimum threshold. Under this definition, the LAS would be determined to be experiencing an undesirable result if the groundwater elevation at any individual key well is below the historical low water level for that well.

The third definition of undesirable results for the LAS is based on the time over which a well may exceed the minimum threshold. Under this definition, the LAS would be determined to be experiencing an undesirable result if the water level in any individual key well were below the minimum threshold for either three consecutive monitoring events or in three of five consecutive monitoring events. Monitoring events are scheduled to occur in the spring and fall of each year.

[3] Wells 02N21W07L03, 01N21W07J02, and 01N21W07L03 are screened in multiple aquifers and have been assigned to the LAS for the purpose of defining undesirable results.

If conditions in the LAS meet any of the definitions of undesirable results listed above, the LAS would be considered to be experiencing undesirable results.

3.4 MINIMUM THRESHOLDS

The following sections and discussion set forth the minimum thresholds for each of the six sustainability indicators. These thresholds discussed below are the proposed minimum groundwater elevations that would prevent undesirable results, defined as net landward migration of the 2015 saline water impact front, net seawater intrusion in the UAS, or net seawater intrusion in the LAS. When groundwater elevations drop below the proposed minimum threshold, the Subbasin may experience undesirable results (Section 3.3.7, Defining Subbasin-Wide Undesirable Results).

The minimum thresholds for chronic lowering of water levels, change in groundwater storage, seawater intrusion, groundwater quality, and land subsidence are based on the historical record of groundwater elevation in individual aquifers, the documented impacts of seawater intrusion, and the hydrogeologic conceptual model developed for the Oxnard Subbasin. All of these undesirable results are interrelated, and each is directly tied to seawater intrusion. Because groundwater elevations, change in storage, and groundwater quality are directly tied to seawater intrusion, the minimum threshold groundwater levels selected to mitigate the effects of seawater intrusion are also used for the other undesirable results as well (Table 3-1).

The minimum threshold groundwater levels selected to prevent seawater intrusion were based on a review of the historical groundwater elevation data and an analysis of the potential for seawater intrusion under multiple future groundwater production scenarios. Predicted groundwater levels were simulated over a 50-year period from 2020 to 2069 (Section 2.4.5, Projected Future Water Budget and Sustainable Yield). The future climate simulated in the model recreated the observed climate from 1930 to 1979, with adjustments to precipitation and streamflow based on climate change factors provided by the California Department of Water Resources (DWR). The historical period from 1930 to 1979 includes periods of drought and periods of above-average precipitation, but has the average precipitation of the entire climate record for the Oxnard Subbasin (Section 2.4.5). The 50-year future simulations were used to assess the rate of groundwater production that results in no net seawater intrusion in either the UAS or the LAS in the Oxnard Subbasin after 2040.

Two simulations were found to minimize net seawater intrusion after 2040 (Figures 2-67a through 2-67e, UWCD Model Particle Tracks for the Reduction With Projects Simulation, and Figures 2-68a through 2-68e, UWCD Model Particle Tracks for the Reduction Without Projects Simulation 1; Section 2.4). Groundwater production in the first simulation, referred to as the Reduction With Projects Scenario (Section 2.4.5.3), averaged approximately 40,000 AFY, with 27,000 AFY of production in the UAS, and 13,000 AFY in the LAS. This simulation incorporated projects, including temporary fallowing of approximately 500 AFY in the Oxnard Subbasin, and deliveries

of approximately 4,000 AFY of recycled water from the City of Oxnard's Groundwater Recovery Enhancement and Treatment (GREAT) Program for irrigation in the coastal area. Groundwater production in the second simulation, referred to as the Reduction Without Projects Scenario 1 (Section 2.4.5.4), averaged approximately 39,000 AFY, with 27,000 AFY of production in the UAS, and 12,000 AFY in the LAS (Section 2.4.5). In general, the simulated groundwater elevations in the model scenario with projects were close to those in the scenario without projects, with any observed difference between the two limited to less than approximately 10 feet (Figures 3-6 through 3-11, Key Well Hydrographs).

The minimum threshold groundwater elevations selected to protect against net seawater intrusion in the UAS and LAS are based on the lowest simulated groundwater elevation after 2040 for the two model simulations in which net seawater intrusion was minimized. To account for some of the uncertainty in the simulated future groundwater elevations, the lowest simulated value in either of the two simulations was used as a starting point for selecting the minimum thresholds. The lowest simulated value was then rounded down to the nearest 5-foot interval to further account for uncertainty in the future simulated groundwater elevations. The rounded groundwater elevation was then raised by 2 feet to account for predicted sea level rise by 2070. The minimum thresholds for each well are presented in Table 3-1 and Figures 3-6 through 3-11.

There are no proposed minimum thresholds in the EOPMA because there are no suitable monitoring wells in the EOPMA (Figure 2-69). The thresholds for the Saline Intrusion Management Area and Oxnard Pumping Depression Management Area, both of which border the EOPMA, are presumed to protect the EOPMA, which has considerably less groundwater production than the adjoining management areas (see Section 2.5). This presumption will be revisited as groundwater elevation data are collected from the EOPMA.

It is important to remember that there are several sources of uncertainty in the model predictions. These sources of uncertainty include, but are not limited to, the prediction of future climate, future diversions from the Santa Clara River, groundwater model assumptions and assigned values, and future groundwater production distribution in the Subbasin. The uncertainty in each of these factors is anticipated to decrease with time. As these factors are better understood, the minimum thresholds should be reassessed, and adjustments should be made, when warranted by the assessment.

3.4.1 Chronic Lowering of Groundwater Levels

The selected minimum thresholds for chronic lowering of groundwater levels are presented in Table 3-1. These minimum thresholds are water levels that were selected based on future groundwater model simulations that limit migration of the 2015 saline water impact front after 2040, limit net seawater intrusion into the UAS and LAS, and indicate that declines in groundwater elevations during periods of future drought will be offset by recoveries during future periods of above-average rainfall.

These minimum thresholds are anticipated to improve the beneficial uses of the Subbasin by limiting seawater intrusion and chronic lowering of groundwater levels. This allows for long-term use of groundwater supplies in the Subbasin without ongoing loss of storage that would cause economic harm to the users of groundwater in the Subbasin and impair the beneficial uses of groundwater in the Subbasin.

These minimum thresholds may impact groundwater users in the Subbasin by requiring both an overall reduction in groundwater production relative to historical levels, and potentially by requiring a redistribution of groundwater pumping within the Subbasin. A redistribution of groundwater production to shift groundwater production inland may require inland users to deepen existing wells or replace wells, and may require adjustment of the currently proposed minimum thresholds in the future. Furthermore, the minimum threshold groundwater elevations may result in a return to artesian conditions in wells screened in the UAS and LAS adjacent to the coast. In these areas, improperly abandoned wells can act as conduits for flow from the aquifer systems to land surface. Additional efforts may need to be undertaken by FCGMA and stakeholders in the Subbasin to prevent negative impacts from rising water levels and improperly abandoned wells.

The minimum thresholds for chronic lowering of groundwater levels are water levels that will be measured at the monitoring wells listed in Table 3-1. Groundwater levels in these wells, which are referred to as "key wells," will be reported to DWR in the annual reports that will follow the submittal of this GSP. Additionally, as funding becomes available, it is recommended that each of these monitoring wells be instrumented with a pressure transducer capable of recording hourly water levels. The groundwater elevation in each well will be compared to the minimum threshold assigned in Table 3-1 to determine whether water levels in individual wells are above the minimum thresholds.

3.4.2 Reduction of Groundwater Storage

The minimum thresholds for reduction in groundwater storage are water levels that were selected based on future groundwater model simulations that limit seawater intrusion in the Subbasin, and indicate that declines in groundwater elevations during periods of future drought will be offset by recoveries during future periods of above-average rainfall (Table 3-1). The minimum thresholds impacts to groundwater users for reduction of groundwater storage are the same as those for chronic lowering of groundwater levels. These minimum thresholds are anticipated to improve the beneficial uses of the Subbasin by allowing for long-term use of groundwater supplies in the Subbasin without replacing freshwater in the UAS and LAS with seawater. Such a replacement would lead to a loss of storage that would cause economic harm to the users of groundwater in the Subbasin and impair the beneficial uses of groundwater in the Subbasin.

The minimum thresholds for reduction of groundwater storage are water levels that will be measured at the key wells two times per year. Additionally, as funding becomes available, it is recommended that each key well be instrumented with a pressure transducer capable of recording hourly water levels. The groundwater elevation in each well will be compared to the minimum threshold assigned in Table 3-1 to determine whether water levels in individual wells are above the minimum thresholds.

3.4.3 Seawater Intrusion

Because the concentration of chloride is not necessarily the best indicator of modern seawater intrusion, the relationship between seawater intrusion and groundwater elevation was investigated using a numerical groundwater model (Appendix C). Groundwater levels in the Oxnard and Mugu Aquifers in coastal areas have historically fallen below sea level in response to increased production and drought cycles since the 1950s (Figure 2-9a, Groundwater Well Hydrographs in the Oxnard Aquifer – Oxnard Plain, and Figure 2-12, Groundwater Well Hydrographs in the Mugu Aquifer). The groundwater levels below sea level resulted in seasonal seawater intrusion during the fall irrigation season and during droughts in coastal wells in the vicinity of Point Hueneme and Point Mugu (Figure 2-35, Selected Historical Records of Water Elevation and Chloride Concentration).

Modeling by UWCD (2018; see Appendix C to this GSP) indicates that there was flux from the ocean into the Oxnard and Mugu Aquifers in the vicinity of the offshore Mugu and Hueneme Submarine Canyons when the coastal groundwater levels in the UAS fell below 5 to 10 feet above mean sea level. In 1990, FCGMA directed pumpers to decrease production in these aquifers to mitigate seawater intrusion. As a result, production in coastal areas shifted from the Oxnard and Mugu Aquifers to the deeper Hueneme Aquifer, the Fox Canyon Aquifer (FCA), and the Grimes Canyon Aquifer (the aquifers that compose the LAS). Water levels in the FCA and the Grimes Canyon Aquifer near the coast quickly fell below sea level and have remained there since the 1980s, even after periods of above-average precipitation (Figure 2-18, Groundwater Well Hydrographs in the Fox Canyon Aquifer, and Figure 2-21, Groundwater Well Hydrographs in the Grimes Canyon Aquifer). The UWCD model indicates continuous flux from the ocean into these aquifers since 1985 (Figure 2-34, Groundwater Flux along the Coast in the Lower Aquifer System).

Because the model indicates a strong relationship between groundwater elevation and seawater intrusion, the minimum thresholds for addressing seawater intrusion are water levels that were selected based on future groundwater model simulations that limited seawater intrusion in the UAS and LAS (Table 3-1). The model simulations suggest that if water levels fall below the minimum threshold elevations, the Subbasin is likely to experience net landward migration of the 2015 saline water impact front after 2040. These minimum thresholds are anticipated to improve the beneficial uses of the Subbasin by limiting seawater intrusion. This allows for long-term use of groundwater supplies in the Subbasin without ongoing loss of storage that would cause economic harm to the users of groundwater in the Subbasin and impair the beneficial uses of groundwater in the Subbasin.

Groundwater users in the Subbasin may be impacted by the minimum thresholds in several ways. First, an overall reduction in groundwater production relative to historical levels will be required to achieve the minimum thresholds. Such a reduction may impact the value of agricultural land, drive changes in crop types, result in temporary fallowing of agricultural acreage, and cause economic disruption to the regional economy. Second, a redistribution of groundwater pumping may be required to optimize water management in the Subbasin. If groundwater production is reduced at the coast and shifted inland, additional infrastructure may be needed to convey water from the inland areas to the coast, inland users may be required to deepen existing wells, and the currently proposed minimum thresholds may need to be lowered for inland areas in the future. Third, as the minimum thresholds are achieved in the coastal areas, additional economic impacts may occur as improperly abandoned wells may need to be properly sealed so they do not act as a conduit for flow from the underlying aquifers.

The minimum thresholds were selected for each aquifer system in the Oxnard Subbasin, primarily using wells screened in a single aquifer. These wells will be used to monitor groundwater elevations in each aquifer system in the Subbasin. Additionally, as funding becomes available, it is recommended that each key well be instrumented with a pressure transducer capable of recording hourly water levels. The groundwater elevation in each well will be compared to the minimum threshold assigned in Table 3-1 to determine whether water levels in individual wells are above the minimum thresholds.

3.4.4 Degraded Water Quality

Water quality impacts to the aquifer systems of the Oxnard Subbasin are limited to high concentrations of nitrate, chloride, and TDS. The sources and mechanisms controlling the concentration of these constituents differs throughout the Subbasin (Section 2.3). Nitrate concentrations in the Forebay exceed the federal MCL in some wells. However, these concentrations cannot be reduced by altering groundwater production in the Subbasin. For these concentrations, the recharge source water should be of the highest quality possible to maintain or improve future groundwater quality (Section 3.3.4, Degraded Water Quality). Although FCGMA cannot control the quality of the recharge water, the groundwater elevations minimum thresholds to prevent net migration of seawater after 2040 are higher than the historical low groundwater elevations at which nitrate concentrations were observed to exceed the federal MCL. These groundwater elevations will be used as the minimum thresholds to prevent further degradation of groundwater quality in the Forebay until such time that a separate concentration minimum threshold is found to be necessary.

In contrast to concentrations of nitrate in the Forebay, the concentration of chloride and TDS in coastal wells is influenced by groundwater production. Concentrations of chloride and TDS exceed federal, state, and local standards in some wells in the Subbasin (Section 2.3). Groundwater

production near the coast induces seawater intrusion, and lowered groundwater elevations induce compaction of fine-grained sediments that release connate brines into the aquifers. Because both of these processes are tied to groundwater elevations in the Subbasin, minimum thresholds for groundwater elevation, rather than concentration, were set to control the additional impacts from seawater and brine migration in the aquifers (Section 3.4.3, Seawater Intrusion). The minimum thresholds selected are the same as the water level thresholds selected to prevent net migration of the 2015 saline water impact front after 2040. These groundwater elevations are higher than historical low elevations, which will prevent further compaction of fine-grained sediments and brine release. They are also designed to prevent further degradation of water quality from direct seawater intrusion.

As discussed previously, the minimum thresholds are anticipated to improve the beneficial uses of the Subbasin by increasing the overall amount of freshwater storage in the Subbasin and limiting the further intrusion of seawater. The minimum thresholds impacts to groundwater users for degraded water quality are anticipated to be the same as those for seawater intrusion, which are described in Section 3.4.3.

The minimum thresholds for degraded water quality are water levels that will be measured at the monitoring wells listed in Table 3-1. Additionally, as funding becomes available, it is recommended that each key well be instrumented with a pressure transducer capable of recording hourly water levels. The groundwater elevation in each well will be compared to the minimum threshold assigned in Table 3-1 to determine whether water levels in individual wells are above the minimum thresholds.

3.4.5 Land Subsidence

The minimum thresholds for land subsidence are water levels that were selected based on future groundwater model simulations that limit seawater intrusion in the Subbasin, and indicate that declines in groundwater elevations during periods of future drought will be offset by recoveries during future periods of above-average rainfall (Table 3-1). As groundwater withdrawals will be reduced to avoid further seawater intrusion, groundwater elevations in the aquifer systems will rise, and the resulting minimum thresholds are higher than historical low water levels. Because groundwater elevations must be maintained above the minimum threshold in order to avoid undesirable results for seawater intrusion and loss of freshwater storage, water levels in the Subbasin will remain above historical low water levels after 2040. Therefore, water levels in the Subbasin will not induce inelastic subsidence in the Subbasin. If the distribution of pumping is altered to mitigate seawater intrusion by reducing pumping near the coast and increasing pumping in the Forebay, the potential subsidence risk may have to be revisited in inland areas. This risk evaluation should be tied to areas in which the minimum thresholds are lowered below previous historical low water levels.

As discussed previously, the minimum thresholds are anticipated to improve the beneficial uses of the Subbasin by increasing the overall amount of freshwater storage in the Subbasin and limiting the further intrusion of seawater. These minimum thresholds also will limit future subsidence because currently they are greater than the historical low groundwater elevation. The minimum thresholds impacts to groundwater users for land subsidence are anticipated to be the same as those for seawater intrusion, which are described in Section 3.4.3.

The minimum thresholds for subsidence are water levels that will be measured at the monitoring wells listed in Table 3-1. Additionally, as funding becomes available, it is recommended that each key well be instrumented with a pressure transducer capable of recording hourly water levels. The groundwater elevation in each well will be compared to the minimum threshold assigned in Table 3-1 to determine whether water levels in individual wells are above the minimum thresholds.

3.4.6 Depletions of Interconnected Surface Water

The minimum thresholds for depletions of interconnected surface water are water levels that were selected based on future groundwater model simulations that limit seawater intrusion in the Subbasin, and indicate that declines in groundwater elevations during periods of future drought will be offset by recoveries during future periods of above-average rainfall (Table 3-1). The areas of interconnected surface water and groundwater and associated GDEs described in Section 2.3.6, Groundwater–Surface Water Connections, and Section 2.3.7, Groundwater-Dependent Ecosystems, are connected to the semi-perched aquifer, from which there is little current groundwater production. Because the semi-perched aquifer is not considered a principal aquifer, specific minimum thresholds were not selected for this unit. Instead, results of the numerical groundwater model scenarios that prevent net landward migration of the 2015 saline water impact front after 2040 indicate that groundwater elevations in the semi-perched aquifer will be supported by groundwater elevations in the underlying Oxnard Aquifer. The Oxnard Aquifer is the uppermost aquifer of the UAS. The simulated minimum threshold water levels in the Oxnard Aquifer that prevent net migration of the 2015 saline water impact front after 2040 were found to result in higher water levels in the semi-perched aquifer. Therefore, the minimum thresholds for depletions of interconnected surface water are water levels in the Oxnard Aquifer that also prevent net migration of the 2015 saline water impact front after 2040. The minimum thresholds are equal to or higher than the lowest groundwater elevation measured at these wells. The selected groundwater elevations are anticipated to protect against depletion of interconnected surface water, because historical groundwater elevations in the semi-perched aquifer have maintained the documented and potential GDEs in the Subbasin (Section 2.3).

As discussed previously, the minimum thresholds are anticipated to improve the beneficial uses of the Subbasin by increasing the overall amount of freshwater storage in the Subbasin and limiting the further intrusion of seawater. The minimum thresholds set will maintain the existing beneficial

uses of the semi-perched aquifer by maintaining groundwater elevations equal to or higher than historical lows. The minimum thresholds impacts to groundwater users for interconnected groundwater and surface water are anticipated to be the same as those for seawater intrusion, which are described in Section 3.4.3.

Currently there is very little groundwater production from the semi-perched aquifer. If water levels in this aquifer rise as a result of reduced groundwater production in the underlying UAS, additional projects may investigate producing water from the semi-perched aquifer. Such projects will have to evaluate the potential impact to interconnected surface water and GDEs as part of the feasibility and permitting process. Additionally, if projects that produce groundwater from the semi-perched aquifer are implemented, the need for specific water level minimum thresholds in the semi-perched aquifer should be reevaluated.

The minimum thresholds for interconnected surface water are water levels that will be measured at the monitoring wells listed in Table 3-1. Additionally, as funding becomes available, it is recommended that each key well be instrumented with a pressure transducer capable of recording hourly water levels. The groundwater elevation in each well will be compared to the minimum threshold assigned in Table 3-1 to determine whether water levels in individual wells are above the minimum thresholds.

3.5 MEASURABLE OBJECTIVES

The measurable objectives are quantifiable goals for the maintenance or improvement of specified groundwater conditions that have been included in an adopted GSP to achieve the sustainability goal. For the Oxnard Subbasin, the measurable objective is the water level—measured at each of the key wells throughout the Subbasin—at which there is neither seawater flow into nor freshwater flow out of the UAS or LAS. If water levels in the Subbasin remained at the measurable objective in perpetuity, no groundwater would flow from the aquifer systems into the Pacific Ocean, and no ocean water would flow into the aquifer systems. This is the theoretical ideal water level for managing the aquifer systems of the Subbasin, because seawater intrusion would be prevented while maintaining the maximum freshwater use from the aquifer systems. However, because groundwater elevations in the Oxnard Subbasin respond to climatic cycles, actual groundwater levels in the Subbasin cannot be maintained at the measurable objective indefinitely. Therefore, to allow for operational flexibility while still preventing net migration of the 2015 saline water impact front after 2040, the measurable objectives were selected to work with the minimum thresholds in the Oxnard Subbasin.

To allow for operational flexibility during drought periods, water levels in the Subbasin are allowed to fall below the measurable objective, so long as they remain above the minimum threshold. As water levels fall below the measurable objective, seawater will flow toward the freshwater aquifer systems in the Subbasin, even if the water levels remain above the minimum threshold. The longer

groundwater elevations remain between the measurable objective and the minimum threshold the greater the volume of seawater that will migrate into the aquifer systems. In order to prevent net seawater intrusion over periods of drought and recovery, the periods during which seawater intrusion occurs must be offset by periods when the groundwater elevations are higher.

There are two components to balancing groundwater levels over climate cycles to prevent net migration of the 2015 saline water impact front after 2040. The first is not allowing groundwater levels to decline below an elevation at which net seawater intrusion will occur. This elevation is the minimum threshold. The second is ensuring that periods during which groundwater levels are above the minimum threshold but below the measurable objective are offset by equal periods during which groundwater levels are above the measurable objective. Therefore, the measurable objectives were selected based on the median groundwater elevation between 2040 and 2070, simulated for each well, in model simulations that prevented net landward migration of the 2015 saline water impact front after 2040.

The median groundwater elevation was rounded down to the nearest 5-foot interval to account for uncertainty in the model simulated future groundwater elevations. In order to account for future sea level rise, the rounded groundwater elevations were increased by 2 feet. The median simulated groundwater elevation (from 2040 to 2070) at each well after rounding and accounting for sea level rise is the measurable objective (Table 3-1). In order to prevent net seawater intrusion in the Subbasin after 2040, observed groundwater levels should be above the measurable objective 50% of the time. Ideally, the periods during which the water levels are above the measurable objectives will coincide with periods of above-average precipitation. If this occurs, additional reductions in groundwater production are not anticipated to be required to offset seawater intrusion. If, however, prolonged periods of drought limit the ability to recharge the groundwater aquifers in the Oxnard Subbasin, additional reductions in groundwater production may be required to offset seawater intrusion.

3.5.1 Chronic Lowering of Groundwater Levels

The measurable objective for the chronic lowering of groundwater levels is the groundwater level at which there is neither seawater flow into nor freshwater flow out of the UAS or LAS. This groundwater level is the same groundwater level that is used to protect against seawater intrusion in the Subbasin. The measurable objective groundwater level was selected for each of the key wells (Table 3-2). At each of these wells, the difference between the measurable objective and the minimum threshold is greater than 10 feet, which provides a margin of safety for operational flexibility in the Subbasin.

Groundwater elevations within each management area of the Oxnard Subbasin will be used to determine whether chronic lowering of groundwater levels is occurring. All of the management areas except the EOPMA have wells in which water levels can be monitored by aquifer. Until a

monitoring well is installed in the EOPMA, the measurable objectives set for the wells in the Saline Intrusion Management Area and Oxnard Pumping Depression Management Area, closest to the EOPMA, are presumed to also protect the EOPMA. The EOPMA has considerably less groundwater production than the WOPMA and does not have an independent suitable monitoring well for selecting a separate measurable objective. This presumption will be revisited as groundwater elevation data are collected from the EOPMA.

Interim Milestones for Chronic Lowering of Groundwater Levels

Interim milestones, which are target groundwater levels in 2025, 2030, and 2035 at key wells, will be used to assess progress toward sustainable groundwater management in the Oxnard Subbasin between 2020 and 2040. The interim milestones for chronic lowering of groundwater levels are the same as the interim milestones for seawater intrusion, because the interim milestones measure progress toward groundwater elevations in the Subbasin that prevent the net migration of the 2015 saline water impact front after 2040.

Two sets of interim milestones were determined for the key wells in the Subbasin (Table 3-2). The first set of interim milestones was calculated using linear interpolation between the fall 2015 low groundwater elevation and measurable objective (Figure 3-12, Interim Milestones for Dry and Average Conditions – Linear Interpolation). The second set was calculated using linear interpolation between the fall 2015 low groundwater elevation and the minimum threshold (Figure 3-12).

Two sets of interim milestones were calculated because the actual groundwater elevation in 2040 will depend both on groundwater production from the Subbasin and the climatic conditions between 2020 and 2040. Groundwater model simulations of future groundwater levels show that groundwater levels throughout the Subbasin vary by tens of feet at constant groundwater production rates over 5-year periods. This variability reflects the variability in annual precipitation, flow in the Santa Clara River, and groundwater recharge through the UWCD spreading grounds. Just as annual climate conditions vary from the calculated long-term historical mean conditions, so do 5-year average climate conditions (Figure 3-13, Distribution of 5-Year Average Climate Conditions in the Historical Record of Precipitation on the Oxnard Plain). Therefore, progress toward the measurable objective, which is the anticipated median groundwater level necessary to prevent net migration of the 2015 saline water impact front after 2040, must be evaluated in the context of the climate that occurred during the preceding 5 water years.

If, for example, the average precipitation from water years 2020 through 2024 (October 1, 2019, through September 30, 2024) equals the long-term historical average precipitation for the Oxnard Subbasin, then, as groundwater production is reduced, the groundwater level at each key well should reach the interim milestone for average climate conditions shown in Table 3-2. Under these conditions, groundwater levels in the Subbasin would be expected to reach the measurable

objective by 2040. If, however, the precipitation from water years 2020 through 2024 is less than 70% of the average long-term historical precipitation, as has occurred six times in the historical record (Figure 3-13), reductions in groundwater production anticipated as part of this GSP would not be sufficient for groundwater elevations to reach the interim milestone for average climate conditions. In order for the Subbasin to be sustainable in 2040 under ongoing dry climate conditions, the interim milestones should reflect progress toward the minimum threshold at each key well, rather than progress toward the measurable objective (Figure 3-13). Five-year climate conditions that fall between average and less than 70% of average would be expected to produce interim milestone groundwater elevations between those listed in Table 3-2.

Although specific interim milestones were not selected at each key well for above-average climate conditions, a similar analysis should be performed as part of the 5-year assessment process. For example, if the average precipitation from water years 2020 through 2024 exceeds 140% of the average long-term historical precipitation, as has occurred six times in the historical record (Figure 3-13), groundwater elevations in the fall of 2024 should be higher than the interim milestone groundwater elevation for average conditions listed in Table 3-2. Further, although Table 3-2 provides interim milestone groundwater elevations for the years 2030, 2035, and 2040, these interim milestones should be reassessed as part of the 5-year GSP evaluation process because of their climate dependence. The linear interpolation and resultant interim milestones should be updated based on the measured water level in the fall of 2024, 2029, and 2034 at each key well.

3.5.2 Reduction of Groundwater in Storage

The measurable objective for reduction of groundwater in storage is the groundwater level at which there is neither seawater flow into nor freshwater flow out of the UAS or LAS (Table 3-2). The measurable objective groundwater level was selected for each of the key wells based on the median predicted groundwater elevation between 2040 and 2070 from groundwater model simulations that minimized the migration of the 2015 saline water impact front after 2040. This groundwater level is the same groundwater level that is used to protect against seawater intrusion in the Subbasin. At each of the key wells, the difference between the measurable objective and the minimum threshold is greater than 10 feet, which provides a margin of safety for operational flexibility in the Subbasin.

All of the management areas except the EOPMA have wells in which water levels can be monitored by aquifer. Until a monitoring well is installed in the EOPMA, the measurable objectives set for the wells in the Saline Intrusion Management Area and Oxnard Pumping Depression Management Area, closest to the EOPMA, are presumed to also protect the EOPMA. The EOPMA has considerably less groundwater production than the WOPMA and does not have an independent suitable monitoring well for selecting a separate measurable objective. This presumption will be revisited as groundwater elevation data are collected from the EOPMA.

Interim Milestones for Reduction of Groundwater in Storage

Interim milestones for reduction of groundwater in storage are presented for two climate scenarios in Table 3-2. The two sets of interim milestones were calculated from a linear interpolation between the fall 2015 low groundwater elevation and either the measurable objective or the minimum threshold at each well. These interim milestones will be used to assess progress toward sustainable groundwater management in the Oxnard Subbasin between 2020 and 2040 as groundwater production from the Subbasin is reduced. The interim milestones for reduction of groundwater in storage are the same as the interim milestones for seawater intrusion.

3.5.3 Seawater Intrusion

The measurable objective for seawater intrusion is the groundwater level at which there is neither seawater flow into nor freshwater flow out of the UAS or LAS (Table 3-2). The measurable objective groundwater level was selected for each of the key wells based on the median predicted groundwater elevation between 2040 and 2070 from groundwater model simulations that minimized the migration of the 2015 saline water impact front after 2040. At each of the key wells, the difference between the measurable objective and the minimum threshold is greater than 10 feet, which provides a margin of safety for operational flexibility in the Subbasin.

All of the management areas except the EOPMA have wells in which water levels can be monitored by aquifer. Until a monitoring well is installed in the EOPMA, the measurable objectives set for the wells closest to the EOPMA in the Saline Intrusion Management Area and the Oxnard Pumping Depression Management Area are presumed to also protect the EOPMA. The EOPMA has considerably less groundwater production than the adjoining management areas and does not have an independent suitable monitoring well for selecting a separate measurable objective. This presumption will be revisited as groundwater elevation data are collected from the EOPMA.

Interim Milestones for Seawater Intrusion

Interim milestones for seawater intrusion are presented for two climate scenarios in Table 3-2. The two sets of interim milestones were calculated from a linear interpolation between the fall 2015 low groundwater elevation and either the measurable objective or the minimum threshold at each key well. These interim milestones will be used to assess progress toward sustainable groundwater management in the Oxnard Subbasin between 2020 and 2040 as groundwater production from the Subbasin is reduced.

3.5.4 Degraded Water Quality

The measurable objective for degraded water quality is the groundwater level at which there is neither seawater flow into nor freshwater flow out of the UAS or LAS (Table 3-2). The measurable

objective groundwater level was selected for each of the key wells based on the median predicted groundwater elevation between 2040 and 2070 from groundwater model simulations that minimized the migration of the 2015 saline water impact front after 2040. This groundwater level is the same groundwater level that is used to protect against seawater intrusion in the Subbasin. At each of the key wells, the difference between the measurable objective and the minimum threshold is greater than 10 feet, which provides a margin of safety for operational flexibility in the Subbasin.

Until a monitoring well is installed in the EOPMA, the measurable objectives set for the wells closest to the EOPMA in the Saline Intrusion Management Area and the Oxnard Pumping Depression Management Area are presumed to also protect the EOPMA. The EOPMA has considerably less groundwater production than the adjoining management areas and does not have an independent suitable monitoring well for selecting a separate measurable objective. This presumption will be revisited as groundwater elevation data are collected from the EOPMA.

Interim Milestones for Degraded Water Quality

Interim milestones for degraded water quality are presented for two climate scenarios in Table 3-2. The two sets of interim milestones were calculated from a linear interpolation between the fall 2015 low groundwater elevation and either the measurable objective or the minimum threshold at each key well. These interim milestones will be used to assess progress toward sustainable groundwater management in the Oxnard Subbasin between 2020 and 2040 as groundwater production from the Subbasin is reduced. The interim milestones for degraded water quality are the same as the interim milestones for seawater intrusion.

3.5.5 Land Subsidence

The measurable objective for land subsidence is the groundwater level at which there is neither seawater flow into nor freshwater flow out of the UAS or LAS (Table 3-2). This groundwater level is higher than the historical low water level in each key well. Therefore, it will protect against land subsidence related to groundwater withdrawal. The measurable objective groundwater level was selected for each of the key wells based on the median predicted groundwater elevation between 2040 and 2070 from groundwater model simulations that minimized the migration of the 2015 saline water impact front after 2040. This groundwater level is the same groundwater level that is used to protect against seawater intrusion in the Subbasin. At each of the key wells, the difference between the measurable objective and the minimum threshold is greater than 10 feet, which provides a margin of safety for operational flexibility in the Subbasin.

Until a monitoring well is installed in the EOPMA, the measurable objectives set for the wells closest to the EOPMA in the Saline Intrusion Management Area and the Oxnard Pumping Depression Management Area are presumed to also protect the EOPMA. The EOPMA has considerably less groundwater production than the adjoining management areas and does not have

an independent suitable monitoring well for selecting a separate measurable objective. This presumption will be revisited as groundwater elevation data are collected from the EOPMA.

Interim Milestones for Land Subsidence

Interim milestones for land subsidence are presented for two climate scenarios in Table 3-2. The two sets of interim milestones were calculated from a linear interpolation between the fall 2015 low groundwater elevation and either the measurable objective or the minimum threshold at each key well. These interim milestones will be used to assess progress toward sustainable groundwater management in the Oxnard Subbasin between 2020 and 2040 as groundwater production from the Subbasin is reduced. The interim milestones for land subsidence are the same as the interim milestones for seawater intrusion.

3.5.6 Depletions of Interconnected Surface Water

The measurable objective for depletions of interconnected surface water is the groundwater level at which there is neither seawater flow into nor freshwater flow out of the UAS or LAS (Table 3-2). This groundwater level is higher than the historical low water level in each key well. Therefore, it will protect against depletions of interconnected surface water related to groundwater withdrawal. The measurable objective groundwater level was selected for each of the key wells based on the median predicted groundwater elevation between 2040 and 2070 from groundwater model simulations that minimized the migration of the 2015 saline water impact front after 2040. This groundwater level is the same groundwater level that is used to protect against seawater intrusion in the Subbasin. At each of the key wells, the difference between the measurable objective and the minimum threshold is greater than 10 feet, which provides a margin of safety for operational flexibility in the Subbasin.

Currently there is very little groundwater production from the semi-perched aquifer. If water levels in this aquifer rise as a result of reduced groundwater production in the underlying UAS, additional projects may investigate producing water from the semi-perched aquifer. Such projects will have to evaluate the potential impact to interconnected surface water and GDEs as part of the feasibility and permitting process. Additionally, if projects that produce groundwater from the semi-perched aquifer are implemented, the need for specific water-level measurable objectives in the semi-perched aquifer should be reevaluated.

Until a monitoring well is installed in the EOPMA, the measurable objectives set for the wells closest to the EOPMA in the Oxnard Pumping Depression Management Area are presumed to also protect the EOPMA. The EOPMA has considerably less groundwater production than the Oxnard Pumping Depression Management Area and does not have an independent suitable monitoring well for selecting a separate measurable objective. This presumption will be revisited as groundwater elevation data are collected from the EOPMA.

Interim Milestones for Depletions of Interconnected Surface Water

Interim milestones for depletions of interconnected surface water are presented for two climate scenarios in Table 3-2. The two sets of interim milestones were calculated from a linear interpolation between the fall 2015 low groundwater elevation and either the measurable objective or the minimum threshold at each key well. These interim milestones will be used to assess progress toward sustainable groundwater management in the Oxnard Subbasin between 2020 and 2040 as groundwater production from the Subbasin is reduced. The interim milestones for interconnected surface water are the same as the interim milestones for seawater intrusion.

Notes: FCA = Fox Canyon Aquifer; ft bgs = feet below ground surface; ft msl = feet mean sea level; GCA = Grimes Canyon Aquifer; GSP = Groundwater Sustainability Plan; SWI = seawater intrusion; WL = water level.
Interim milestones are proposed for wells with spring 2015 groundwater elevations that are lower than the minimum threshold groundwater elevation. Wells with spring 2015 groundwater elevations that are higher than the minimum threshold are currently in compliance with the goals of this GSP and do not require milestones to assess progress toward sustainability.

- Las Posas Valley (4-008)
- Pleasant Valley (4-006)
- Oxnard (4-004.02)

Notes:
1) Well labels consist of an abbreviated State Well Number (SWN). SWNs are based on Township and Range in the Public Land Survey System. To construct a full SWN from the abbreviation shown on the map, concatenate the Township, Range, abbreviation, and the letter "S". Example: the SWN for the well labeled "15L01" located in Township 02N (T02N) and Range 22W (R22W) is 02N22W15L01S. Geotracker wells do not have SWN IDs and so are not labeled.
2) All elevation values are in feet above mean sea level (ft AMSL).
3) Aquifer designation information for individual wells was provided by FCGMA, CMWD and UWCD.

CHAPTER 4
MONITORING NETWORKS

4.1 MONITORING NETWORK OBJECTIVES

The overall objective of the monitoring network in the Oxnard Subbasin (Subbasin) is to track and monitor parameters that demonstrate progress toward meeting the sustainability goals. In order to accomplish this objective, the monitoring network in the Subbasin must be capable of the following:

- Monitoring changes in groundwater conditions (in six sustainability indicator categories)
- Monitoring progress toward minimum thresholds and measurable objectives
- Quantifying annual changes in water budget components

The existing network of groundwater wells includes both monitoring wells and production wells. This network is capable of delineating the groundwater conditions in the Subbasin and has been used for this purpose in the past. The current groundwater well network will be used to monitor groundwater conditions moving forward, in order to continue to assess long-term trends in groundwater elevation and groundwater quality in the Subbasin.

In the future, to the extent possible, additional dedicated monitoring wells will be incorporated into the existing monitoring network. These wells will provide information on groundwater conditions in geographic locations where data gaps have been identified, or where a dedicated monitoring well would better represent conditions in the aquifers than a production well currently used for monitoring.

4.2 DESCRIPTION OF EXISTING MONITORING NETWORK

The existing monitoring network for groundwater and related surface conditions in the Subbasin includes groundwater production wells, dedicated groundwater monitoring wells, stream gauges, and weather stations. The components of the monitoring network are discussed in Section 4.2.1, Groundwater Monitoring, and Section 4.2.2, Surface Conditions Monitoring, in the context of their ability to demonstrate short-term, seasonal, and long-term trends in groundwater and related surface conditions and of the ability of the network to provide representative conditions in the Subbasin. A discussion of how the monitoring network relates to each of the sustainability criteria follows this discussion in Section 4.3, Monitoring Network Relationship to Sustainability Indicators.

4.2.1 Groundwater Monitoring

Groundwater Elevation

Data collected from more than 150 wells in the Subbasin have been used to demonstrate historical groundwater elevation conditions in the Upper Aquifer System and Lower Aquifer System (Figures 4-1 through 4-6, Monitoring Wells Screened in the Oxnard Subbasin (by aquifer)). The groundwater well monitoring network contains wells that are located in every management area of the Subbasin except the East Oxnard Plain Management Area (EOPMA) and that are screened in every primary aquifer in the Subbasin. Although the network of groundwater wells includes agricultural, municipal and industrial, and domestic production wells, the majority of the wells used to determine groundwater elevations are designated as monitoring wells in the Ventura County Watershed Protection District (VCWPD) database of groundwater elevation and groundwater quality data collected in the Subbasin.

The United Water Conservation District (UWCD) collects groundwater elevation data from more than 100 monitoring and agricultural wells in the Subbasin. These wells are monitored either monthly or bimonthly (once every two months). Water levels are measured both manually and with pressure transducers, which record the pressure of water (or height of the water column) above the transducer in the well. Pressure transducers have been installed in 65 of these wells. These transducers record the height of the water column in the well every 4 hours, thereby providing high temporal resolution data on groundwater conditions in the aquifers. Data are downloaded from the transducers quarterly, in a rotating pattern. Transducer records are subject to quality control review before being added to UWCD databases and reported to VCWPD.

Manual groundwater elevation measurements are collected monthly or bimonthly from the UWCD network of groundwater wells. These data are used to assess seasonal and long-term trends in groundwater elevation in the Subbasin, where groundwater elevations were first measured in the 1930s. Seasonal and long-term groundwater elevation trends have been assessed based on the data collected from the existing network of groundwater monitoring wells, and are discussed in Section 2.3, Groundwater Conditions, of this Groundwater Sustainability Plan (GSP).

The spatial and temporal coverage of the existing groundwater monitoring network is sufficient to provide an understanding of representative conditions in the Upper Aquifer System and Lower Aquifer System throughout the Subbasin, and this network will be used to demonstrate progress toward the sustainability goals for the Subbasin. Although evaluation of the current network suggests that the network is sufficient to document groundwater conditions in the Subbasin, areas for future improvement of the network are identified in Section 4.6, Potential Monitoring Network Improvements.

Groundwater Quality

The majority of the wells in the groundwater elevation monitoring network in the Subbasin are also monitored for groundwater quality. UWCD conducts the majority of the water quality monitoring in the Subbasin. UWCD water quality monitoring is conducted in a rotating pattern such that each well is monitored at least once per year. Annual monitoring of groundwater quality is sufficient to demonstrate long-term trends in groundwater quality, because the physical processes that drive changes in groundwater quality operate on a longer timescale. Currently, groundwater elevations are the primary metric by which progress toward sustainability will be measured. However, groundwater quality data will continue to be collected and analyzed to assess whether groundwater elevation thresholds are sufficiently protective of groundwater conditions in the Subbasin. Recommendations for improvement of the groundwater quality monitoring network are identified in Section 4.6.

Groundwater Extraction

The Fox Canyon Groundwater Management Agency (FCGMA) has required reporting of groundwater extraction from the Subbasin since 1983. Historically, groundwater extraction data from wells within the FCGMA jurisdictional boundary have been self-reported by well owners semi-annually (Figure 2-5, Upper Aquifer System 2015 Extraction [acre-feet] in Oxnard and Pleasant Valley, and Figure 2-6, Lower Aquifer System 2015 Extraction [acre-feet] in Oxnard and Pleasant Valley). In 2018, FCGMA adopted an ordinance that required installation of advanced metering infrastructure (AMI) telemetry on wells that were equipped with flowmeters (FCGMA 2018). All agricultural wells were required to install AMI by December 31, 2018; municipal and industrial wells are required to install AMI by October 1, 2019; and all other metered wells are required to install AMI by October 1, 2020. Requiring AMI on all metered wells within FCGMA jurisdiction will provide for broader simultaneous reporting of groundwater extractions, improve FCGMA's ability to monitor and manage groundwater use, and facilitate implementation of this GSP.

4.2.2 Surface Conditions Monitoring

The primary surface conditions that impact groundwater conditions in the Oxnard Subbasin are surface water flows and precipitation. The monitoring networks for both surface conditions are discussed in this section.

Surface Water

Surface flows in the Subbasin are monitored by a network of gauges that are maintained by the VCWPD (Table 4-1). The network includes three types of gauges:

1. Recording Stream Gauges (also known as Daily and Peak Stations). These stream gauges record daily average flowrates as well as "peak" flowrates during rain events.

2. Peak Only (Event) Gauges. This type of stream gauge records only "peak" flowrates during rain events (the threshold over which a flowrate is considered to be part of a rain event is site-specific).
3. ALERT Peak Gauges. These stream gauges serve only as a flood warning system. These stations register high flows but are not used to measure numerical flow rates.

The recording stations at the Freeman Diversion Channel near Saticoy, Santa Clara River at Victoria Avenue, Beardsley Wash at Central Avenue, and the Revolon Slough at Pleasant Valley Road are recording gauges that provide the primary data on surface flows. These gauges collect daily data, while the other gauges in the basin only record flows during precipitation events.

In addition to the surface flow monitoring network in the Subbasin, UWCD monitors and reports diversions from the Santa Clara River. These diversions are used to deliver surface water to agricultural users in lieu of groundwater production and are used for recharge, via UWCD's spreading grounds, to the groundwater aquifers in the Subbasin.

Surface water flows have been recorded in the Subbasin since the 1930s (Figure 1-4, Average Daily Flows (ADF) and Monthly Minimum ADF in Oxnard Surface Waters). Daily flows on Calleguas Creek and in the Revolon Slough have been recorded since the 1970s. There are currently gauges on the major surface water bodies in the Subbasin (Figure 4-7, Active Surface Water Monitoring Network for the Oxnard Subbasin). The historical and existing spatial and temporal coverage from the surface water flow gauge network provides adequate coverage for the short-term, seasonal, and long-term surface flow conditions in the Subbasin. Although the current network is sufficient to document surface flow conditions in the Subbasin, areas for improvement are identified in Section 4.6.

Precipitation

Thirteen precipitation gauges currently monitor precipitation in the Subbasin (Table 4-2; Figure 4-8, Active Precipitation Monitoring Network for the Oxnard Subbasin). The precipitation gauges are maintained, and data are collected, by VCWPD and the National Weather Service.

Precipitation in the Subbasin has been recorded for more than a century (Figure 1-5, Oxnard Plain Annual Precipitation). Although the locations of individual precipitation gauges have changed through time, with some gauges being removed from service and others added, there is overlap between the records collected from the various gauges. Therefore, a continuous precipitation record can be constructed for the Subbasin to demonstrate long-term trends. More recent data, collected with greater frequency, can be used to demonstrate short-term and seasonal trends in precipitation.

In addition to providing adequate temporal coverage of the Subbasin, the current network of precipitation gauges includes sites in every management area of the Subbasin except the EOPMA. This is sufficient spatial coverage to document precipitation in the Subbasin and to connect the precipitation measurements to both streamflow and groundwater conditions. Additional precipitation monitoring locations are not currently recommended for characterizing surface conditions in the Oxnard Subbasin.

4.3 MONITORING NETWORK RELATIONSHIP TO SUSTAINABILITY INDICATORS

To document changes in groundwater conditions related to each of the six sustainability indicators, monitoring will be conducted using the existing network of groundwater wells (Figures 4-1 through 4-6). This network includes a greater number of wells than the list of key wells provided in Chapter 3, Sustainable Management Criteria, of this GSP (see Tables 4-3 and 4-4). Minimum thresholds and measurable objectives have been selected for the set of key wells but have not been selected for every well used to monitor groundwater conditions in the Subbasin. Conditions measured in the key wells will be used to document progress toward the sustainability goals. Groundwater conditions measured in the broader network of wells, which includes the key wells, will be used to document conditions in the Subbasin at a greater spatial coverage than is provided by the key wells. Recommendations and findings based on the key well data will be supported by the data collected by the broader well network.

4.3.1 Chronic Lowering of Groundwater Levels

To monitor conditions related to chronic lowering of groundwater levels, the groundwater monitoring network must be structured to accomplish the following:

- Track short-term, seasonal, and long-term trends in water elevation.
- Demonstrate groundwater elevations in mid-March and mid-October for each primary aquifer or aquifer system.
- Record groundwater elevations in key wells in which minimum thresholds and measurable objectives have been identified to track progress toward the sustainability goals for the Subbasin.

Spatial Coverage by Aquifer

The Subbasin monitoring well density for groundwater elevations varies by aquifer (Tables 4-3 and 4-4). Of the primary aquifers in the Subbasin identified in Chapter 2, Basin Setting, the Grimes Canyon Aquifer has the lowest density of active wells in which groundwater elevations can be measured. The density of wells in the Grimes Canyon Aquifer is approximately 1 well per 13 square

miles (the Oxnard Subbasin area is approximately 90 square miles). There is no definitive rule for the density of groundwater monitoring points needed in a basin; however, for comparison, the monitoring well density recommended by CASGEM Groundwater Elevation Monitoring Guidelines ranges from 1 to 10 wells per 100 square miles (DWR 2010). Additional California Department of Water Resources (DWR) guidelines recommend a well network with a density of 1 observation per 16 square miles (DWR 2010, 2016b). Therefore, the density of wells in the Grimes Canyon Aquifer meets the criteria for adequate coverage to accomplish the objectives of the monitoring well network for determining chronic lowering of groundwater levels.

In addition to the Grimes Canyon Aquifer, the density of wells in the other primary aquifers in the Subbasin is also greater than the recommended well density provided in the DWR and CASGEM guidelines. The density of active monitoring wells in the Fox Canyon Aquifer (FCA) and the Hueneme Aquifer is approximately 1 well per 4 square miles. The density of active monitoring wells in the Mugu Aquifer is approximately 1 well per 3 square miles, and the density of active monitoring wells in the Oxnard Aquifer is approximately 1 well per square mile.

Groundwater elevations are also monitored in the semi-perched aquifer, although the semi-perched aquifer is not a primary aquifer in the Subbasin. These elevations are measured to document interactions between the semi-perched aquifer and the surface water bodies in the Subbasin, as well as to document potential gradients between the semi-perched aquifer and the underlying Oxnard Aquifer. The density of monitoring wells in the semi-perched aquifer is approximately 1 well per 13 square miles. This density meets the DWR and CASGEM criteria for documenting groundwater elevations in the semi-perched aquifer.

Although the active network of wells used to document chronic lowering of groundwater levels in the Subbasin has sufficient spatial density on the Subbasin scale, in some aquifers, there are local areas in which coverage can be improved. Potential improvements in local coverage are discussed in Section 4.6.

Temporal Coverage by Aquifer

Groundwater elevation data will be collected from the network of groundwater wells to provide groundwater elevation conditions in the spring and fall of each year. Further discussion of the monitoring schedule is provided in Section 4.4, Monitoring Network Implementation.

4.3.2 Reduction of Groundwater Storage

To monitor conditions related to reduction of groundwater storage, the groundwater monitoring network must be structured to accomplish the following:

- Demonstrate groundwater elevations in mid-March and mid-October for each primary aquifer or aquifer system.
- Calculate year-over-year (mid-March to mid-March) change in storage by aquifer.
- Provide data from which lateral and vertical hydraulic gradients within and between aquifers can be calculated.
- Record groundwater elevations in key wells in which minimum thresholds and measurable objectives have been identified to track progress toward the sustainability goals for the Subbasin.

The requirements for documenting reduction in groundwater storage are similar to those for chronic lowering of groundwater levels (see Section 4.3.1), because these two sustainability indicators are interrelated. The primary difference between the two sets of requirements is the need to document potential gradients between aquifers. These gradients influence the movement of water between aquifers, which in turn influences storage in the aquifer.

Historically, the change in groundwater stored in freshwater aquifers in the Subbasin has been modeled by UWCD. After GSP adoption, modeled volumes of annual change in storage will be reported by aquifer and by year in annual reports. A standardized method to calculate the change in storage that relies solely on water elevations within each aquifer, rather than on a numerical model, may also be developed as a check on the model predictions.

The spatial and temporal density of groundwater elevation data necessary to document groundwater storage changes in the aquifers of the Subbasin is the same as that necessary to document groundwater elevation changes. The current network of wells is capable of documenting changes to both sustainability indicators. Specific recommendations for potential improvements to local coverage are discussed in Section 4.6.

4.3.3 Seawater Intrusion

To monitor conditions related to seawater intrusion, groundwater elevations will be measured, and water quality samples will be collected, in such a way as to accomplish the following:

- Track short-term, seasonal, and long-term trends in water elevation.
- Demonstrate groundwater elevations in mid-March and mid-October for each primary aquifer or aquifer system.

- Record groundwater elevations in key wells in which minimum thresholds and measurable objectives have been identified to track progress toward the sustainability goals for the Subbasin.

These goals are the same as those for chronic lowering of groundwater levels (see Section 4.3.1). Groundwater elevations are the metric by which seawater intrusion will be assessed (see Section 3.3.3).

Spatial Coverage by Aquifer

A network of nested monitoring wells was installed in the early 1990s by the U.S. Geological Survey for the Regional Aquifer System Analysis, which includes 16 wells in the Oxnard Subbasin (USGS 1996). Fourteen of these well sites are located within an approximately 28-square-mile area adjacent to the Pacific Ocean. Thus, the density of dedicated monitoring wells adjacent to the coast is approximately 1 well per 2 square miles. The current network of wells is capable of documenting groundwater elevations that could induce seawater intrusion. No additional coastal monitoring wells are proposed.

Water Quality Constituents

Groundwater samples will continue to be collected and analyzed for total dissolved solids (TDS) and chloride in order to assess trends in groundwater quality related to seawater intrusion. The network of existing wells is capable of providing an adequate assessment of groundwater quality trends for these constituents.

Temporal Resolution

Historically, groundwater quality samples have been collected with sufficient temporal resolution to identify seawater intrusion in the aquifers of the Subbasin (see Section 2.3.3, Seawater Intrusion, of this GSP). The temporal resolution of the data has varied through time and depends on the entity monitoring a given well. UWCD has collected annual groundwater samples from the network of monitoring wells along the Subbasin coastline since the late 1980s (UWCD 2016). These samples have documented long-term trends in chloride concentration for the coastal wells. Because the degradation of water quality associated with seawater intrusion is a process that occurs over a longer time than changes in groundwater elevation associated with groundwater production, annual groundwater quality sampling is adequate for documenting changes in chloride and TDS concentration associated with seawater intrusion.

4.3.4 Degraded Water Quality

To monitor conditions related to degraded water quality, water quality samples will be collected in such a way as to track long-term trends in water quality that may impact beneficial uses and users of groundwater in the Subbasin. Specifically, these water quality samples should be targeted to constituents of concern and areas of the Subbasin that have documented degradation, or the potential for degradation, in water quality related to groundwater production from the Subbasin.

Spatial Coverage by Aquifer

The network of wells currently used to monitor groundwater elevation conditions in each aquifer is sufficient to determine trends in groundwater quality as well. The primary areas of concern for groundwater quality degradation relating to groundwater elevations in the Subbasin are the Forebay Management Area, the Saline Intrusion Management Area, and the Oxnard Pumping Depression Management Area. Monitoring groundwater quality changes associated with seawater intrusion is discussed in Section 4.3.3. The spatial density of groundwater elevation monitoring wells is discussed in Section 4.3.1. The spatial coverage provided by the existing monitoring network is sufficient to document changes in groundwater quality.

Water Quality Constituents

Monitoring and annual reporting has occurred for constituents that are associated with a water quality threshold adopted by the FCGMA Board of Directors or by the Los Angeles Regional Water Quality Control Board. These constituents are TDS, chloride, nitrate, sulfate, and boron. The network of existing wells is capable of providing an adequate assessment of groundwater quality trends for these constituents.

Temporal Resolution

Degradation of groundwater quality occurs on a longer timescale than changes in groundwater elevation. Historically, UWCD has collected water quality samples on a quarterly basis and VCWPD has collected samples annually, although more frequent sampling can occur in some wells. These samples have provided information on trends in groundwater quality throughout the Subbasin. Samples from coastal wells have been used to document seawater intrusion, and samples from wells in the Oxnard Forebay have been used to document degradation of water quality related to increasing nitrate concentrations (see Section 2.3). The temporal resolution of the data collection is adequate to document trends in groundwater concentration for the constituents identified by the FCGMA Board of Directors and the Los Angeles Regional Water Quality Control Board.

4.3.5 Land Subsidence

To monitor conditions related to land subsidence, groundwater elevations will be measured to determine if water levels fall below historical lows. Groundwater elevations are being used as a proxy for land subsidence in the Subbasin. The minimum thresholds identified at the key wells are above the historical low groundwater elevation. Therefore, it is not anticipated that specific land subsidence monitoring will be required for the Subbasin. Instead, the network of groundwater monitoring wells discussed in Sections 4.2.1 and 4.3.1 will be used to determine if land subsidence related to groundwater production may occur.

4.3.6 Depletions of Interconnected Surface Water

To monitor conditions related to depletions of interconnected surface water, surface water flows and shallow groundwater will be measured in such a way as to accomplish the following:

- Track short-term, seasonal, and long-term trends in groundwater elevation in the semi-perched aquifer.
- Demonstrate groundwater elevations in mid-March and mid-October for the semi-perched aquifer.
- Record groundwater elevations in key wells in which minimum thresholds and measurable objectives have been identified to track progress toward the sustainability goals for the Subbasin.

Surface water flows in the Revolon Slough, Calleguas Creek, and the Santa Clara River downstream of, but not including, the Freeman Diversion are connected to water levels in the semi-perched aquifer, rather than the underlying confined aquifers of the Upper Aquifer System and Lower Aquifer System. In turn, the groundwater elevation in the semi-perched aquifer is effectively regulated by the height of the agricultural tile drains installed throughout the Oxnard Plain (UWCD 2016).

Although the active network of wells used to document groundwater conditions in the semi-perched aquifer has sufficient spatial density at the Subbasin scale, there are local areas in which coverage can be improved. Potential improvements in local coverage are discussed in Section 4.6.

4.4 MONITORING NETWORK IMPLEMENTATION

4.4.1 Groundwater Elevation Monitoring Schedule

To reduce uncertainty associated with hydraulic gradients, and to follow guidance documents produced by DWR (DWR 2016b), water level measurements used in the evaluation of seasonal high

and seasonal low groundwater conditions should be collected in a 2-week window in mid-March and mid-October (specifically, March 9–22 and October 9–22 of any given calendar year).

Short-term trends in groundwater elevation are currently, and will continue to be, monitored using transducers that are operated and maintained by UWCD. Data from these transducers are downloaded quarterly and stored in a central database.

Seasonal and long-term trends in groundwater elevation are monitored using the transducer data and manual measurements made by UWCD on a monthly or bimonthly basis, and manual measurements made by VCWPD on a quarterly basis. Additional manual water level measurements made by other partner agencies (e.g., the City of Oxnard or mutual water districts) are typically sent to VCWPD annually.

4.4.2 Groundwater Storage Monitoring Schedule

Groundwater storage is directly related to, and calculated from, groundwater elevations. Consequently, the schedule for monitoring groundwater storage is the same as that for monitoring groundwater elevations.

4.4.3 Seawater Intrusion Monitoring Schedule

Groundwater Elevation

Twice-yearly comprehensive evaluations (in mid-March and mid-October) of groundwater elevations in each aquifer will be used to assess progress toward minimum thresholds designed to avoid seawater intrusion.

Groundwater Quality

Annual groundwater quality samples for each coastal well will be used to monitor water quality trends related to seawater intrusion.

4.4.4 Water Quality Monitoring Schedule

UWCD conducts monthly or quarterly monitoring of groundwater quality in many wells throughout the Oxnard Subbasin. Wells with stable water quality are sampled annually or twice annually by UWCD. Groundwater quality monitoring should continue on the same schedule in order to document groundwater quality trends in the Subbasin. Annual reviews of the groundwater quality trends will be used to assess whether sampling frequency or the spatial density of samples needs to be adjusted.

4.4.5 Groundwater Extraction Monitoring Schedule

Monitoring of groundwater extraction rates will take place continuously, using flowmeters and telemetry equipment installed on individual wellheads, and monthly totals of pumped water will be transmitted to a central database maintained by FCGMA.

4.5 PROTOCOLS FOR DATA COLLECTION AND MONITORING

Protocols for collecting groundwater level measurements and water quality samples, as well as downloading transducers and logging the boreholes of newly drilled wells, are included in the Monitoring Protocols Best Management Practices (BMPs) produced by DWR (DWR 2016a). FCGMA plans to work with agency partners to ensure that future data collection is conducted according to relevant protocols in the BMP. Current practices used by VCWPD and UWCD are described in this section.

VCWPD Protocols

VCWPD technicians collect water levels using steel tapes. For a well that is too deep for the tape, an acoustical sounder or an air pressure gauge is used, and the measurement is stored in the database with a Questionable Measurement Code, indicating that alternate equipment was used.

VCWPD technicians collect water quality samples from production wells using the installed pump equipment. A three-volume purge, or a testing of groundwater parameters including pH, temperature, and electrical conductivity, is conducted to determine whether the water at the wellhead is representative of groundwater in the aquifer. Water quality samples are then sent to an analytical laboratory, where they are filtered and preserved.

UWCD Protocols

UWCD technicians collect water levels using a variety of equipment, including dual-wire and single-wire sounders and metal tapes. In the event that the well contains a pump, the technician manually tests the approximate temperature of the pump housing. If the pump housing is warm, the water level that is entered into the database is qualified with a Questionable Measurement Code, indicating recent pumping. UWCD also considers other indicators, such as wet conditions at wells and in nearby fields, to evaluate if water levels may not be static.

UWCD technicians collect water quality samples using the three-volume purge method, and follow U.S. Geological Survey guidelines for groundwater quality sampling. For shallow wells, a Grundfos Redi-Flo pump is used to purge and sample the groundwater. For deeper wells, a compressor is used to airlift the groundwater for purging and sampling. On rare occasions, a bailer is used to purge and sample.

4.6 POTENTIAL MONITORING NETWORK IMPROVEMENTS

The existing monitoring network in the Subbasin is sufficient to document groundwater conditions in the Subbasin, and can be used to document progress toward the sustainability goals for the Subbasin. Analysis of the monitoring network, however, also indicates that there are local areas in which data coverage and monitoring efforts can be improved in the future. Areas for improvement of the existing monitoring network and data infrastructure system, are described in the following sections.

4.6.1 Water Level Measurements: Spatial Data Gaps

Additional monitoring wells could be used to improve spatial coverage for groundwater elevation measurements in the West Oxnard Plain Management Area, the Oxnard Pumping Depression Management Area, and the EOPMA. Wells that are added to the network should be dedicated monitoring well clusters, with individual wells in the cluster screened in a single aquifer. The potential improvements to the monitoring network in each aquifer are shown on Figures 4-9 through 4-14 (Existing and Potential New Wells for Monitoring Groundwater Conditions, by aquifer).

The groundwater monitoring network in the Subbasin could be improved by adding monitoring wells in the Oxnard Pumping Depression Management Area (Figures 4-9 through 4-14). An additional well, or wells, in this area would provide aquifer-specific groundwater elevations in an area that does not have local wells screened solely in the Mugu Aquifer or the Hueneme Aquifer, and does not have a dedicated monitoring well screened in any of the primary aquifers. Groundwater elevation measurements in this well would help constrain groundwater gradients across the boundary between the Subbasin and the Pleasant Valley Basin. Additionally, a well in this management area could be used to assess groundwater conditions in the semi-perched aquifer adjacent to the Revolon Slough. FCGMA has applied for funding through a DWR Technical Support Services monitoring well funding grant to add a monitoring well in the Oxnard Pumping Depression Management Area.

In the West Oxnard Plain Management Area, the groundwater monitoring network could be improved by adding a monitoring well to the area north of Highway 101 and south of the Oxnard Forebay. Currently, there are no dedicated monitoring wells in this area (Figures 4-9 through 4-14). Adding a monitoring well in this area would provide for aquifer-specific water levels adjacent to the West Las Posas Management Area boundary. These groundwater levels could be used to constrain the gradient between the West Las Posas Management Area and the Subbasin.

The monitoring network in the West Oxnard Plain Management Area could also be improved by adding a monitoring well to the area north of 6th Street and west of Ventura Road. This area has dedicated monitoring wells in the Oxnard Aquifer, but does not have a dedicated monitoring well in the Mugu or Hueneme Aquifer or the FCA. A monitoring well in this area would help constrain groundwater gradients in the northwest part of the Oxnard Subbasin.

There are currently no monitoring wells in the EOPMA, which has minimal known groundwater production. Addition of a monitoring well in the vicinity of Calleguas Creek in the EOPMA would improve understanding of groundwater conditions in this management area. It would also provide data to help constrain the relationship between groundwater elevations in the EOPMA and groundwater conditions in the adjacent Oxnard Pumping Depression and Saline Intrusion Management Areas.

New wells will be constructed to applicable well installation standards set in California DWR Bulletins 74-81 and 74-90, or as updated (DWR 2016b). It is recommended that, where feasible, new wells be subjected to pumping tests to collect additional information about aquifer properties in the vicinity of new monitoring locations.

Proposed locations are approximate and subject to feasibility review (accounting for infrastructure, site acquisition, and site access, among other factors) after GSP submittal. The schedule for new well installation will be developed in conjunction with feasibility review.

4.6.2 Water Level Measurements: Temporal Data Gap

The DWR Monitoring Protocol BMP (DWR 2016a) states the following:

> Groundwater elevation data … should approximate conditions at a discrete period in time. Therefore, all groundwater levels in a basin should be collected within as short a time as possible, preferably within a 1 to 2 week period.

The DWR Monitoring Networks BMP (DWR 2016b) states the following:

> Groundwater levels will be collected during the middle of October and March for comparative reporting purposes.

Currently, groundwater elevation measurements are not scheduled according to these criteria. To minimize the effects of this type of temporal data gap in the future, it will be necessary to coordinate the collection of groundwater elevation data so it occurs within a 2-week window during the key reporting periods of mid-March and mid-October. The recommended collection windows are October 9 to 22 in the fall and March 9 to 22 in the spring (see Section 4.4).

Additionally, as funding becomes available, pressure transducers should be added to wells in the groundwater monitoring network. Pressure transducer records provide the high temporal resolution data that allows for a better understanding of water level dynamics in the wells related to groundwater production, groundwater management activities, and climatic influence.

4.6.3 Groundwater Quality Monitoring

To improve the existing groundwater quality monitoring in the Subbasin, the current analyte list could be expanded to include a full general minerals suite. Stiff or Piper diagrams could then be created to fully characterize the geochemical characteristics of the groundwater and track changes over time. UWCD currently gets a general mineral analysis at least annually for most monitoring wells in the Oxnard Subbasin.

4.6.4 Subsidence Monitoring

Currently, neither FCGMA nor its partner agencies in the region monitor land subsidence. The U.S. Geological Survey maintained one benchmark in the southern part of the Oxnard Plain between 1939 and 1978 (see Section 2.3.5, Subsidence, of this GSP), but it is not currently operational. Subsidence related to groundwater production is not anticipated to occur in the Subbasin in the future because the minimum threshold groundwater elevations are higher than the historical low groundwater elevations in the Subbasin. Preexisting GPS-based benchmarks could be used for monitoring land subsidence in the event that groundwater elevations drop below historical low levels for an extended period, and the potential for land subsidence to substantially interfere with surface land uses is determined (see Section 3.3.5, Land Subsidence). Additionally, historical InSAR and LIDAR records exist for the Oxnard Plain and could be used for comparison to future conditions if groundwater production causes water levels that are below the historical lows.

4.6.5 Shallow Groundwater Monitoring near Surface Water Bodies and GDEs

Currently, there are relatively few wells that can be used to monitor the shallow groundwater in the semi-perched aquifer that may be interconnected with surface water bodies and sustain GDEs or potential GDEs in the Subbasin. To improve the existing monitoring network and to assist with understanding the potential connectivity between shallow groundwater and potential GDEs, a dedicated shallow monitoring well within the boundaries of the potential GDE along the Revolon Slough and an additional dedicated shallow monitoring well in the vicinity of Lower Calleguas Creek could be added to the monitoring network, independent of an additional nested well cluster (Figure 2-52, Groundwater Dependent Ecosystems for the Oxnard Subbasin).

Additional shallow monitoring wells are not proposed for the coastal GDEs (Lower Santa Clara River, McGrath Lake, Ormond Beach, and Mugu Lagoon) described in Section 2.3.7, Groundwater-Dependent Ecosystems, of this GSP (see Figures 2-52 through 2-56). The coastal GDEs are sustained by groundwater in the semi-perched aquifer, which is rarely used for water supply in the Subbasin (FCGMA 2007). However, if future projects propose to produce water from the semi-perched aquifer, depletion of interconnected surface water is possible, and significant and unreasonable impacts may occur. Therefore, additional monitoring wells may be necessary and should be installed in conjunction with the planning for those projects.

4.6.6 Surface Water: Flows in Agricultural Drains in the Oxnard Plain

Discharge flows are currently unmeasured in the drainage system, frequently referred to as the "tile drains," that was installed throughout the Oxnard Plain in the 1950s (Isherwood and Pillsbury 1958). The tile drains were installed to support the development of land in the Oxnard Plain, which was formerly affected by high soil salinity levels, for agriculture (Isherwood and Pillsbury 1958). The drains are typically located 6 to 7 feet below ground surface, though the depth varies and is not well documented in most areas. Shallow groundwater entering the drains discharges to central drainage ditches, and from there flows into local surface waters, such as the Revolon Slough, or directly to the ocean, such as at Port Hueneme.

Metering flow in the tile drains would provide an important check on numerical groundwater results and would also provide valuable information about the water resource potential of the semi-perched aquifer. The tile drain system is extensive, and in much of the Oxnard Plain its current state of repair is currently unknown. A feasibility study is recommended to identify the best locations in the drainage system for installing flowmeters.

Notes: FCA = Fox Canyon Aquifer; GCA = Grimes Canyon Aquifer; GSP = Groundwater Sustainability Plan; LAS = Lower Aquifer System; O&M = operations and maintenance; UAS = Upper Aquifer System; UWCD = United Water Conservation District.

[a] As of October 2017.

[b] Although sometimes used to mean twice a month (i.e., semimonthly), *bimonthly* as used here means once every 2 months.

INTENTIONALLY LEFT BLANK

Legend

- Existing monitoring well screened in the semi-perched aquifer
- 15P01 Abbreviated State Well Number (see notes)
- Fox Canyon Groundwater Management Agency Boundary (FCGMA 2016)
- Faults (County of Ventura 2016)
- Township (North-South) and Range (East-West)

Revised Bulletin 118 Groundwater Basins and Subbasins (DWR 2016c)

- Las Posas Valley (4-008)
- Pleasant Valley (4-006)
- Oxnard (4-004.02)

Oxnard Subbasin Management Areas

- East Oxnard Plain Management Area (EOPMA)
- Forebay Management Area
- West Oxnard Plain Management Area (WOPMA)
- Oxnard Pumping Depression Management Area
- Saline Intrusion Management Area

Notes:
1) Well labels consist of an abbreviated State Well Number (SWN). SWNs are based on Township and Range in the Public Land Survey System. To construct a full SWN from the abbreviation shown on the map, concatenate the Township, Range, abbreviation, and the letter "S". Example: the SWN for the well labeled "15L01" located in Township 02N (T02N) and Range 22W (R22W) is 02N22W15L01S.
2) Aquifer designation information for individual wells was provided by FCGMA, CMWD and UWCD.

CHAPTER 5
PROJECTS AND MANAGEMENT ACTIONS

5.1 INTRODUCTION TO PROJECTS AND MANAGEMENT ACTIONS

Projects and management actions have been developed to meet the sustainability goal, measurable objectives, and undesirable results identified for the Oxnard Subbasin (Subbasin) in Chapter 3, Sustainability Management Criteria, of this Groundwater Sustainability Plan (GSP). Seawater intrusion in the aquifers of the Upper Aquifer System (UAS) and Lower Aquifer System (LAS) has been identified as the undesirable result that will impact beneficial uses of groundwater in the Subbasin.

To address potential impacts to beneficial uses and users of groundwater in the Subbasin resulting from groundwater production in excess of the current sustainable yield, several projects were developed for the Subbasin. The projects listed below were suggested by stakeholders, selected for inclusion in the GSP through a process by the Operations Committee of the Fox Canyon Groundwater Management Agency (FCGMA) Board of Directors (Board), and approved for inclusion in the GSP by the FCGMA Board. The criteria for including a project in the GSP included the following:

- Sufficient project information is available for evaluation and modeling.
- Project increases sustainable yield, or reduces groundwater demand.
- Project implementation is planned within 20 years.
- Project meets GSP Emergency Regulations Section 354.44 criteria.
- There is an agency proponent for the project.
- Funding for the project is identified.

In the Oxnard Subbasin, five projects were determined by the Operations Committee to meet the above criteria. These five projects were incorporated into the future model scenarios to the extent possible (see Section 2.4.5, Projected Future Water Budget and Sustainable Yield). The inclusion of these projects does not constitute a commitment by the FCGMA Board to construct or fund the projects, but rather signals that these projects were sufficiently detailed to be included in groundwater modeling efforts that examined the quantitative impacts of the projects on groundwater elevations and the sustainable yield of the Subbasin. As currently envisioned, the projects in this GSP would be implemented by the project proponent or sponsoring agency. However, FCGMA may opt to implement projects in the future as necessary to achieve sustainability in the Subbasin. Additionally, all projects undertaken in the Subbasin will need to be approved and permitted by all relevant regulatory agencies. These agencies may include, but are not limited to, the Regional Water Quality Control Board and the State Water Resources Control Board.

In addition to the projects discussed in this chapter, the FCGMA Board has the authority to implement management actions to ensure that the Subbasin does not experience undesirable results. The primary management action that can be implemented by the FCGMA Board is restrictions on groundwater production. This authority was granted to the FCGMA Board in the enabling legislation that formed the FCGMA, and this action has been undertaken in the past to eliminate overdraft.

As discussed in Chapter 2, Basin Setting, groundwater modeling was used to evaluate projected water budget conditions and potential impacts to beneficial uses and users of groundwater in the basin. Without the type of projects described below, substantially greater reductions in groundwater production will be needed to meet the sustainability goal for the basin, which would lead to significant economic disruption and prevent groundwater in the basin from being put to beneficial use to the fullest extent possible. It is anticipated, and recommended, that FCGMA will evaluate, model, and conduct feasibility studies of other projects for achieving sustainable groundwater management for the 5-year update to this GSP to optimize basin management and minimize extraction restrictions.

5.2 PROJECT NO. 1 – GREAT PROGRAM ADVANCED WATER PURIFICATION FACILITY

5.2.1 Description of Project No. 1

The Groundwater Recovery Enhancement and Treatment (GREAT) Program's Advanced Water Purification Facility (AWPF) is part of the City of Oxnard's GREAT Program, which focuses on using existing water resources more efficiently. The AWPF provides the City of Oxnard with a source of reclaimed water that can be used for landscape irrigation, agricultural, industrial process water, and groundwater recharge. The AWPF is designed to initially treat approximately 8 to 9 million gallons per day (mgd) of secondary effluent from the Oxnard Wastewater Treatment Plant and produce 6.25 mgd of product water for reclaimed water uses. This is equivalent to 7,000 acre-feet per year (AFY) of product water that can be delivered through existing infrastructure. The AWPF is currently producing up to 4,600 AFY. Advanced purified water was first delivered to agricultural operators in 2016. The portion of the project that is being considered for inclusion in GSP is the additional water that is being purchased by FCGMA to reduce groundwater extractions for which no Recycled Water Pumping Allocation is issued.

5.2.2 Relationship of Project No. 1 to Sustainability Criteria

GREAT Program AWPF Project water was included in future groundwater modeling scenarios to examine the impact that the project may have on the sustainability criteria. This project was incorporated in the modeling along with the expansion of the GREAT Program AWPF (see Section 5.3, Project No. 2 – GREAT Program Advanced Water Purification Facility Expansion Project)

and the temporary fallowing of agricultural land (see Section 5.6, Project No. 5 – Temporary Agricultural Land Fallowing Project). Therefore, the relationship between the impact of this project alone and the sustainability indicators has not been quantified. Rather, the potential effect of this project in the context of all three of these projects is presented in this discussion.

Relationship to Minimum Thresholds

The minimum thresholds for both the UAS and the LAS in the Oxnard Subbasin are higher than the historical low water levels and the spring 2015 water levels (see Chapter 3). In the UAS, the minimum thresholds are approximately 41 feet higher than historical low water levels and 25 feet higher than spring 2015 water levels. In the LAS, the minimum thresholds are approximately 70 feet higher than historical low water levels, and 38 feet higher than spring 2015 water levels.

The numerical groundwater model simulation of the Future Baseline With Projects scenario, which incorporates potential future projects including the GREAT Program AWPF Project, results in higher groundwater elevations than the Future Baseline scenario, which does not incorporate projects (see Section 2.4). Incorporation of the projects resulted in groundwater elevations at the end of the 50-year model simulation that were, on average, approximately 2 feet higher in the UAS and approximately 8 feet higher in the LAS. This suggests that the projects will assist with water level recovery in the Subbasin, a necessary first step to avoid exceedance of the minimum thresholds. Although implementation of the projects increases water levels in the Subbasin, these projects alone did not provide sufficient recycled water or redistribution of groundwater production to avoid exceedance of the minimum thresholds.

As modeled, the GREAT Program AWPF Project supplied approximately 4,600 AFY of recycled water to farmers in the vicinity of Hueneme Road (Chapter 2). This accounts for approximately half of the water delivered in the Future Baseline With Projects scenario. Because groundwater elevations were higher in the Future Baseline With Projects scenario than they were in the Future Baseline scenario, and because the GREAT Program AWPF Project supplied approximately half of the project water modeled this project is anticipated to result in measurably higher groundwater elevations in the Oxnard Subbasin. Therefore, the GREAT Program AWPF Project is anticipated to benefit the Subbasin and assist with raising groundwater elevations above the minimum thresholds in the future.

Relationship to Measurable Objectives

The relationship of the GREAT Program AWPF Project to the measurable objectives is similar to the relationship with the minimum thresholds. By measurably increasing water levels in the Subbasin, the GREAT Program AWPF Project water will help the Oxnard Subbasin meet the measurable objective water levels defined in Chapter 3.

5.2.3 Expected Benefits of Project No. 1

The AWPF product water that will be put to use in the Oxnard Subbasin is secondary wastewater effluent that is currently discharged to the Pacific Ocean. Therefore, this project provides a new source of water for use in the Subbasin. This additional water is expected to benefit the Oxnard Subbasin by providing water that would otherwise be pumped from the Subbasin to farmers in the vicinity of Hueneme Road, an area that is currently threatened by the inland migration of the saline water impact front (see Section 2.3, Groundwater Conditions).

5.2.4 Timetable for Implementation of Project No. 1

Phase 1 of the GREAT Program AWPF Project has already been permitted and constructed, and the AWPF Project is currently operating in the Subbasin. Under the current program, AWPF water is being delivered to farmers. The City of Oxnard receives a Recycled Water Pumping Allocation for delivered water used by farmers in lieu of groundwater production. Implementation of the project relative to the GSP will depend on the timetable necessary to deliver the GREAT Program AWPF water to farmers for in-lieu groundwater production for which no allocation or credits are provided to the City of Oxnard. Therefore, if the GREAT Program AWPF Project is incorporated into management of the Oxnard Subbasin for the purpose of increasing groundwater elevations to meet the sustainability criteria, the time for implementing the GREAT Program AWPF Project will depend on acquiring the necessary agreements between FCGMA and the City of Oxnard. This is anticipated to require less than 1 year.

5.2.5 Metrics for Evaluation of Project No. 1

Evaluation of the GREAT Program AWPF Project will be based on the quantity of water delivered to farmers in the vicinity of Hueneme Road and the associated reduction in groundwater production from this area. Groundwater producers in the Oxnard Subbasin have been required to report groundwater production to FCGMA since 1983. The GREAT Program AWPF water delivered to farmers will also have to be reported to FCGMA if this project is implemented as part of the GSP.

5.2.6 Economic Factors and Funding Sources for Project No. 1

The capital to construct the GREAT Program AWPF Project facilities has already been funded by City of Oxnard bonds and federal grant money (FCGMA 2018). Ongoing operations and maintenance are anticipated to equal approximately $300 per acre-foot (AF) of water generated by the project (FCGMA 2018). Funding for operations and maintenance has not been identified; however, as proposed, funding may come from a replenishment fee implemented by the FCGMA Board.

Any action taken by the FCGMA Board, acting as the Groundwater Sustainability Agency for the portion of the Oxnard Subbasin in its jurisdiction, to impose or increase a fee shall be taken by ordinance or resolution. Should the FCGMA Board decide to fund a project through imposition of a replenishment fee, FCGMA will hold at least one public meeting, at which oral or written presentations may be made. Notice of the meeting will include an explanation of the fee to be considered and the notice shall be published pursuant to Section 6066 of the Government Code.[1] At least 20 days prior to the meeting, the Groundwater Sustainability Agency will make the data on which the proposed fee is based available to the public.

5.3 PROJECT NO. 2 – GREAT PROGRAM ADVANCED WATER PURIFICATION FACILITY EXPANSION PROJECT

5.3.1 Description of Project No. 2

The GREAT Program's AWPF is part of the City of Oxnard's GREAT Program, which focuses on using existing water resources more efficiently. The purpose of the GREAT Program AWPF Expansion Project is to increase the production of high-quality recycled water within the City of Oxnard, the Oxnard Subbasin, and the Pleasant Valley Basin. This project will provide additional reclaimed water for Subbasin recharge. The AWPF Expansion Project is predicated on the availability of secondary effluent from the Oxnard Wastewater Treatment Plant or other available and appropriate source water. The main project components include purchase and installation of additional microfiltration, reverse osmosis, and ultraviolet/advanced oxidation equipment. Additionally, the project will require construction of influent flow equalization facilities. The AWPF Expansion Project could occur in phases, which would be dictated by the availability of source water, recycled water uses and needs, and project funding.

5.3.2 Relationship of Project No. 2 to Sustainability Criteria

GREAT Program AWPF Expansion Project water was included in future groundwater modeling scenarios to examine the impact that the project will have on the sustainability criteria. This project was incorporated in the modeling along with the GREAT Program AWPF Project (see Section 5.2, Project No. 1 – GREAT Program Advanced Water Purification Facility) and the temporary fallowing of agricultural land (see Section 5.6). Therefore, the relationship between the impact of this project alone and the sustainability indicators has not been quantified. Rather, the potential effect of this project in the context of all of three of these projects is presented in this discussion.

[1] Publication of notice pursuant to Section 6066 of the Government Code: "shall be once a week for two successive weeks. Two publications in a newspaper, published once a week or oftener, with at least five days intervening between the respective publication dates not counting such publication dates are sufficient."

Relationship to Minimum Thresholds

The numerical groundwater model simulation of the Future Baseline With Projects scenario, which incorporates potential future projects including the GREAT Program AWPF Expansion Project, results in higher groundwater elevations than the Future Baseline scenario, which does not incorporate projects (see Section 2.4, Water Budget). Incorporation of the projects resulted in groundwater elevations at the end of the 50-year model simulation that were, on average, approximately 2 feet higher in the UAS and approximately 8 feet higher in the LAS. This suggests that the projects will assist with water level recovery in the Subbasin, a necessary first step to avoid exceedance of the minimum thresholds. Although implementation of the projects increases water levels in the basin, these projects alone did not provide sufficient recycled water or redistribution of groundwater production to meet the minimum thresholds.

The AWPF Expansion Project water accounts for approximately half of the water delivered in the Future Baseline With Projects scenario. Because groundwater elevations were higher in the Future Baseline With Projects scenario compared to the Future Baseline scenario, and because the AWPF Expansion Project supplied approximately half of the project water modeled, the AWPF Expansion Project is anticipated to result in measurably higher groundwater elevations in the Oxnard Subbasin. Therefore, this project is anticipated to benefit the Subbasin and assist with raising groundwater elevations above the minimum thresholds in the future.

As modeled, the GREAT Program AWPF Expansion Project supplied approximately 4,500 AFY of recycled water to the United Water Conservation District (UWCD) Saticoy Spreading Grounds (see Section 2.4.5). This would be a recharge, rather than an in-lieu, program. However, the exact use of the AWPF Expansion Project water is not currently specified. It can be used for groundwater recharge, but it can also be used as part of an in-lieu program or for indirect potable reuse.

Relationship to Measurable Objectives

The relationship of the GREAT Program AWPF Expansion Project to the measurable objectives is similar to the relationship with the minimum thresholds. By measurably increasing water levels, the GREAT Program AWPF Expansion Project will help the Oxnard Subbasin meet the measurable objective water levels defined in Chapter 3.

5.3.3 Expected Benefits of Project No. 2

The AWPF Expansion Project product water that will be put to use in the Oxnard Subbasin is secondary wastewater effluent that is currently discharged to the Pacific Ocean. Therefore, this project provides a new source of water for use in the Subbasin. This additional water is expected to benefit the Oxnard Subbasin by providing additional recharge via the Saticoy Spreading Grounds (see Section 2.3).

5.3.4 Timetable for Implementation of Project No. 2

The City of Oxnard has already constructed and already operates the GREAT Program AWPF. As discussed in Section 5.3.1, Description of Project No. 2, the AWPF Expansion Project will require purchase and installation of additional equipment, as well as construction of influent flow equalization facilities. The expansion can occur in phases; therefore, the timetable for implementing the project is not fixed at this time. The implementation timetable for expansion of the AWPF is not dependent on permits or completion of California Environmental Quality Act (CEQA) documentation, which has already been obtained. The City of Oxnard estimates that the construction timetable for implementation of the AWPF Expansion Project is approximately 1 year.

The timetable for incorporating the GREAT Program AWPF Expansion Project water into sustainable management programs will also depend on how the water will be used. If, for example, the water will be conveyed to the Saticoy Spreading Grounds, the necessary infrastructure to convey the water will need to be constructed, in addition to construction of the expanded facility. Depending on the permitting required and construction time frames, it is anticipated that the timetable for incorporation of the AWPF Expansion Project water in sustainable management programs may take an additional 1 to 5 years beyond what was estimated by the City of Oxnard for construction of the expanded AWPF alone.

5.3.5 Metrics for Evaluation of Project No. 2

Evaluation of the GREAT Program AWPF Expansion Project will be based on the quantity of water delivered by the project. This water will be metered and the quantity of water delivered will be reported to FCGMA annually.

5.3.6 Economic Factors and Funding Sources for Project No. 2

Expansion of the AWPF can occur in phases, and the degree to which the AWPF is expanded will depend on the quantity of water available and the demand for the water produced. Therefore, the exact cost of expanding the GREAT Program AWPF is not currently known. Under one potential expansion scenario, the facility upgrades are anticipated to cost approximately $16,600,000 (FCGMA 2018). Under this scenario, the water produced by the facility would cost approximately $1,900 per AF. Operations and maintenance costs for the expanded AWPF would be approximately $440 per AF. Funding sources have not yet been identified for this project, although a portion of the project may be funded by replenishment fees implemented by the FCGMA Board. Any action taken by the FCGMA Board to impose or increase a fee shall be taken by ordinance or resolution, and notice shall be provided of any meeting at which imposition of the ordinance or resolution will be discussed (see Section 5.2.6, Economic Factors and Funding Sources for Project No. 1).

5.4 PROJECT NO. 3 – RIVERPARK–SATICOY GRRP RECYCLED WATER PROJECT

5.4.1 Description of Project No. 3

The RiverPark–Saticoy Groundwater Replenishment and Reuse Project (GRRP) Recycled Water Project will convey water produced by the GREAT Program AWPF Expansion Project (see Section 5.3) to the Saticoy Groundwater Recharge Facility and El Rio Groundwater Recharge Facility operated by UWCD (FCGMA 2018). In 2016, the City of Oxnard completed the northernmost portion of its 9.5-mile north–south Recycled Water Backbone Pipeline, which terminates at the RiverPark development adjacent to the Santa Clara River, north of Highway 101. This pipeline does not currently reach UWCD's groundwater recharge facilities. Under the GRRP Recycled Water Project, the Recycled Water Backbone Pipeline will be extended by 3 miles to convey water from the AWPF Expansion Project to UWCD groundwater recharge facilities. The 3-mile pipeline extension is called the RiverPark–Saticoy Pipeline. Up to 4,800 AFY of water will be conveyed to the UWCD recharge facilities via the Recycled Water Backbone and RiverPark–Saticoy Pipelines. It should be noted that this project does not provide water in addition to Project No. 2; rather, it provides the infrastructure to deliver the GREAT AWPF expansion water to the Saticoy Spreading Grounds.

5.4.2 Relationship of Project No. 3 to Sustainability Criteria

The RiverPark–Saticoy GRRP Recycled Water Project, using the AWPF Expansion Project product water to recharge groundwater in the Oxnard Forebay, was included in future groundwater modeling scenarios to examine the impact that the project will have on the sustainability criteria. The RiverPark–Saticoy GRRP Recycled Water Project is the same as the GREAT Program AWPF Expansion Project, as incorporated into the numerical groundwater model simulations, because the RiverPark–Saticoy GRRP Recycled Water Project simply provides the infrastructure to convey the water. It does not provide additional water to the Subbasin beyond what was modeled for the GREAT Program AWPF project. As discussed in Section 5.2.2, Relationship of Project No. 1 to Sustainability Criteria, and Section 5.3.2, Relationship of Project No. 2 to Sustainability Criteria, the relationship between the impact of this project alone and the sustainability indicators has not been quantified. Rather, the potential effect of this project in the context of all three of these projects is presented in this discussion.

Relationship to Minimum Thresholds

As modeled, the RiverPark–Saticoy GRRP Recycled Water Project provided the infrastructure to supply approximately 4,500 AFY of recycled water to the UWCD Saticoy Spreading Grounds (see Section 2.4.5). This would be a recharge, rather than an in-lieu, program. The numerical groundwater model simulation of the Future Baseline With Projects scenario, which incorporates

potential future projects including the RiverPark–Saticoy GRRP Recycled Water Project, results in higher groundwater elevations than the Future Baseline scenario, which does not incorporate projects (see Section 2.4). This suggests that the projects will assist with water level recovery in the Subbasin, a necessary first step to avoid exceedance of the minimum thresholds. Although implementation of the projects increases water levels in the basin, these projects alone did not provide sufficient recycled water or redistribution of groundwater production to avoid the exceedance of the minimum thresholds.

The AWPF Expansion Project water, delivered via the RiverPark–Saticoy GRRP Recycled Water Project, accounts for approximately half of the water delivered in the Future Baseline With Projects scenario. Because groundwater elevations were higher in the Future Baseline With Projects scenario than they were in the Future Baseline scenario, and because the RiverPark–Saticoy GRRP Recycled Water Project supplied approximately half of the project water modeled, the RiverPark–Saticoy GRRP Recycled Water Project is anticipated to result in measurably higher groundwater elevations in the Oxnard Subbasin. Therefore, the RiverPark–Saticoy GRRP Recycled Water Project is anticipated to benefit the Subbasin and assist with raising groundwater elevations above the minimum thresholds in the future.

Relationship to Measurable Objectives

The relationship of the RiverPark–Saticoy GRRP Recycled Water Project to the measurable objectives is similar to the relationship with the minimum thresholds. By measurably increasing water levels, the RiverPark–Saticoy GRRP Recycled Water Project will help the Oxnard Subbasin meet the measurable objective water levels defined in Chapter 3.

5.4.3 Expected Benefits of Project No. 3

The RiverPark–Saticoy GRRP Recycled Water Project is expected to benefit the Oxnard Subbasin by providing the infrastructure to take secondary treated wastewater from the Oxnard Water Treatment Plant and using it for groundwater recharge (FCGMA 2018). Currently, this water is being discharged to the Pacific Ocean. The RiverPark–Saticoy Pipeline and the GRRP will help ensure that excess flows from the AWPF will be used for groundwater recharge. In addition, the product water from the AWPF Expansion Project is of higher quality than groundwater in the Oxnard Forebay. Therefore, by using this water to recharge groundwater in the Forebay, implementation of the GRRP Recycled Water Project is expected to improve groundwater quality in the Forebay (FCGMA 2018).

5.4.4 Timetable for Implementation of Project No. 3

UWCD estimates that the RiverPark–Saticoy GRRP Recycled Water Project could be implemented in 18 to 24 months. The project is already in the preliminary design phase and a draft

initial study/mitigated negative declaration has been prepared. The required project permits (a groundwater replenishment reuse permit and a California Department of Transportation (Caltrans) permit) are anticipated to take 12 to 18 months to obtain, and the likelihood of obtaining these permits is anticipated to be high (FCGMA 2018).

5.4.5 Metrics for Evaluation of Project No. 3

The metric for evaluation of the RiverPark–Saticoy GRRP Recycled Water Project will be the quantity of water delivered to UWCD's groundwater recharge facilities. UWCD will meter the deliveries and will report these to FCGMA for incorporation in the annual and periodic GSP evaluation process.

5.4.6 Economic Factors and Funding Sources for Project No. 3

Funding sources for the RiverPark–Saticoy GRRP Recycled Water Project is proposed to come from either UWCD Zone B or FCGMA funds (FCGMA 2018). UWCD proposes funding assistance from FCGMA for the capital cost of the project, which is estimated to be $6.4 million, with an annual operations and maintenance cost of approximately $5 million to $7.5 million. The resulting water cost would be approximately $1,000 to $1,500 per AF. These operating costs are anticipated to be provided by a pump charge administered by FCGMA. The timeline necessary to secure funding for the project is anticipated to be the same as the construction timeline.

Any action taken by the FCGMA Board to impose or increase a fee shall be taken by ordinance or resolution, and notice shall be provided of any meeting at which imposition of the ordinance or resolution will be discussed (see Section 5.2.6).

5.5 PROJECT NO. 4 – FREEMAN EXPANSION PROJECT

5.5.1 Description of Project No. 4

UWCD currently operates the Freeman Diversion on the Santa Clara River, which diverts surface water flows from the river into recharge facilities for the purpose of providing additional recharge to the Oxnard Subbasin, and for direct delivery to growers via UWCD pipelines. Through time, more restrictive environmental regulatory requirements have lessened the amount of Santa Clara River surface water available to be diverted at the Freeman Diversion. The Freeman Expansion Project proposes constructing facilities capable of diverting surface water at higher flow rates and with higher sediment loads than the currently diverted flows (FCGMA 2018). Using the higher flows, which are less conducive to fish migration, has been encouraged by both regulatory agencies and non-governmental organizations (FCGMA 2018).

The Freeman Expansion Project would expand the recharge facilities, using two former gravel mines located adjacent to UWCD's Noble Basin recharge facility that have not previously been used for groundwater recharge, and would increase the capacity of UWCD's diversion system (FCGMA 2018). The project would also include modification and expansion of existing fish screens, modifications to the existing desilting basin, and construction of a high-capacity conveyance to the former Ferro aggregate mining pit. Although the exact capacity of the project is not currently known, UWCD anticipates that at full project build-out, the expanded facility could provide an additional 7,400 AF of diversions relative to the current diversion capacity (FCGMA 2018).

5.5.2 Relationship of Project No. 4 to Sustainability Criteria

Historically UWCD has diverted over 62,000 AFY from the Freeman Diversion (see Table 2-8). The Freeman Expansion Project would provide up to an additional 7,400 AF. Although expansion of UWCD's diversion capabilities at the Freeman Diversion was not explicitly modeled in the GSP future projects scenarios, historical groundwater elevations are strongly and positively correlated with the quantity of surface water diverted by UWCD. Therefore, increased surface water diversions that will be delivered directly to agricultural users, thereby offsetting groundwater production, or that will be recharged via UWCD's recharge facilities will help increase water levels in the Subbasin.

Relationship to Minimum Thresholds

Groundwater elevations in the Oxnard Subbasin are currently below the minimum thresholds proposed in Chapter 3 of this GSP. Increased recharge of surface water that currently flows to the Pacific Ocean will help water levels recover to elevations above the proposed minimum thresholds. The magnitude of the groundwater level rise will depend on the quantity of additional recharge available via the expanded diversion facilities.

Relationship to Measurable Objectives

The relationship of the Freeman Expansion Project to the measurable objectives is the same as the relationship with the minimum thresholds. By increasing water levels in the Subbasin, the Freeman Diversion Project will help the Oxnard Subbasin meet the measurable objective water levels defined in Chapter 3.

5.5.3 Expected Benefits of Project No. 4

The Freeman Expansion Project will provide an additional source of water to the Oxnard Subbasin by diverting high flows, which are not as suitable for fish migration, from the Santa Clara River and using those flows to provide additional groundwater recharge. The surface water flows in the Santa Clara River are lower in total dissolved solids and nitrate concentration compared to the

groundwater in the Oxnard Forebay. Therefore, this project will reduce the concentrations of these constituents in the groundwater. Additionally, replenishing the groundwater will reduce pump lift, and therefore energy consumption, for municipal and agricultural pumpers (FCGMA 2018).

5.5.4 Timetable for Implementation of Project No. 4

The timetable for implementation of the Freeman Expansion Project is estimated to be between 2 and 10 years (FCGMA 2018). The required modifications to the conveyance system needed to deliver turbid water have been analyzed, and this project was included in the UWCD Habitat Conservation Plan (FCGMA 2018). However, the project has not yet undergone environmental review, engineering design, or permitting.

5.5.5 Metrics for Evaluation of Project No. 4

The metric for evaluation of the Freeman Expansion Project would be the quantity of surface water diverted at flow rates that are higher than the current maximum flow rate that can be diverted. UWCD meters diversions from the Santa Clara River and would report these to FCGMA.

5.5.6 Economic Factors and Funding Sources for Project No. 4

Improvements to the conveyance system, fish screens, and desilting basin inlet are estimated to cost $31 million (FCGMA 2018). The annual operations and maintenance cost is estimated to be $700,000. The combined capital and operations and maintenance cost of the water is estimated to be approximately $4,300 AFY. Funding sources for the project are anticipated to include grant money, UWCD rate payers, and replenishment fees from FCGMA.

Any action taken by the FCGMA Board to impose or increase a fee shall be taken by ordinance or resolution, and notice shall be provided of any meeting at which imposition of the ordinance or resolution will be discussed (see Section 5.2.6).

5.6 PROJECT NO. 5 – TEMPORARY AGRICULTURAL LAND FALLOWING PROJECT

5.6.1 Description of Project No. 5

The Temporary Agricultural Land Fallowing Project would use replenishment fees to lease and temporarily fallow agricultural land (FCGMA 2018). This would result in decreased groundwater production on the parcels or ranches that are fallowed, and an overall reduction in groundwater demand in the Subbasin. Parcels or ranches in areas susceptible to seawater intrusion would be targeted with this project (FCGMA 2018).

5.6.2 Relationship of Project No. 5 to Sustainability Criteria

Temporary fallowing of agricultural land was included in future groundwater modeling scenarios to examine the impact that the project will have on the sustainability criteria (see Section 2.4.5). As discussed in Sections 5.2.2 and 5.3.2, the relationship between the impact of this project alone and the sustainability indicators has not been quantified. Rather, the potential effect of this project in the context of all three of these projects is presented in this discussion.

Relationship to Minimum Thresholds

As modeled, the Temporary Agricultural Land Fallowing Project reduced production from the Subbasin by approximately 500 AFY (see Section 2.4.5). The numerical groundwater model simulation of the Future Baseline With Projects scenario, which incorporates potential future projects including the Temporary Agricultural Land Fallowing Project, results in higher groundwater elevations than the Future Baseline scenario, which does not incorporate projects (see Section 2.4). This suggests that the projects will assist with water level recovery in the Subbasin, a necessary first step to meet the minimum threshold. Although implementation of the projects increases water levels in the basin, these projects alone did not provide sufficient supplemental water or redistribution of groundwater production to meet the minimum thresholds. Additionally, the Temporary Agricultural Land Fallowing Project accounted for approximately 7% of the total volume of water delivered or saved by all of the projects in the Oxnard Subbasin that were incorporated into the future groundwater model scenarios. The effect of this project on groundwater elevations is likely smaller than that of other projects incorporated into the future model scenarios. However, the value of this project is more directly connected with the location of the land that would be fallowed. If the project can target areas that are prone to seawater intrusion, the impact of this project will be greater than would be indicated by a comparison of the volume of water supplied.

Relationship to Measurable Objectives

The relationship of the Temporary Agricultural Land Fallowing Project to the measurable objectives is similar to the relationship with the minimum thresholds. By increasing water levels and fallowing agricultural land prone to seawater intrusion, the Temporary Agricultural Land Fallowing Project will help the Oxnard Subbasin meet the measurable objective water levels defined in Chapter 3.

5.6.3 Expected Benefits of Project No. 5

Temporary fallowing is a quick way to reduce demand with no capital costs or infrastructure needed. Because it is inexpensive, it is envisioned that temporary fallowing could be implemented early, while other long-term solutions are investigated and implemented. The Temporary

Agricultural Land Fallowing Project will benefit the Oxnard Subbasin by mitigating seawater intrusion in the Subbasin. This project would complement a water market that is currently being developed for the Subbasin by providing an alternative method for landowners to monetize pumping allocations (FCGMA 2018).

5.6.4 Timetable for Implementation of Project No. 5

The project is currently in the planning phase but does not require construction of new facilities and is unlikely to require permitting. CEQA compliance has not yet been initiated but the project proponents anticipate that a negative declaration or a mitigated negative declaration may be sufficient (FCGMA 2018). The project could be implemented when FCGMA is able to collect replenishment fees, and willing lessors are found to participate.

5.6.5 Metrics for Evaluation of Project No. 5

The metric for evaluation of the Temporary Agricultural Land Fallowing Program will be the volume of groundwater that is not produced from wells that supply the fallowed acreage. FCGMA has required groundwater production reporting since 1983. Groundwater production rates from before the project is implemented will be compared to groundwater production rates when the parcel or ranch has been fallowed. If the project is implemented, the historical production rates and associated base period for calculating those rates will be determined.

5.6.6 Economic Factors and Funding Sources for Project No. 5

The funding source for this project is anticipated to be replenishment fees collected by FCGMA. The cost of water under this project is estimated to be $1,200 to $1,800 per acre-foot. Any action taken by the FCGMA Board to impose or increase a fee shall be taken by ordinance or resolution, and notice shall be provided of any meeting at which imposition of the ordinance or resolution will be discussed (see Section 5.2.6)

5.7 MANAGEMENT ACTION NO. 1 – REDUCTION IN GROUNDWATER PRODUCTION

5.7.1 Description of Management Action No. 1

The primary management action proposed under this GSP is a Reduction in Groundwater Production from the Oxnard Subbasin. FCGMA has had the authority to monitor and regulate groundwater production in the Oxnard Subbasin since 1983. The FCGMA Board has used its authority to reduce groundwater production from the Subbasin in the past, and will continue to exert its authority over groundwater production as the Groundwater Sustainability Agency for the Subbasin.

The estimated long-term rate of groundwater production in the UAS that will prevent net seawater intrusion after 2040 is approximately 32,000 AFY ± 4,100 to 6,000 AFY (see Section 2.4.5). The estimated long-term rate of groundwater production in the LAS that will prevent net seawater intrusion after 2040 is approximately 7,000 AFY ± 2,300 to 3,600 AFY (see Section 2.4.5). Reductions in groundwater production were modeled as a linear decrease from the 2015–2017 production rates. The exact reductions that will be implemented in the Subbasin over the next 5 years will be determined by the FCGMA Board based on the data collected and analyzed for this GSP. These reductions will be evaluated based on the potential paths to reaching sustainability discussed in Chapter 3.

5.7.2 Relationship of Management Action No. 1 to Sustainability Criteria

Reducing groundwater production in the Oxnard Subbasin has a measurable impact on groundwater elevations. Groundwater elevations, in turn, control seawater intrusion. Seawater intrusion occurs in the Subbasin when groundwater elevations fall below threshold elevations that maintain sufficient hydrostatic pressure to keep seawater from moving landward. The relationship between seawater intrusion and groundwater elevation is impacted by groundwater production throughout the Subbasin, but is strongest in wells adjacent to the coast.

The effect of Reduction in Groundwater Production on groundwater level elevations was simulated using a numerical groundwater model (see Section 2.4.5). The results of the model and the relationship between Reduction in Groundwater Production and the sustainability criteria is discussed below.

Relationship to Minimum Thresholds

In the absence of additional projects, purchase of imported water, and shifting groundwater production locations, Reduction in Groundwater Production in the Subbasin is a critical component of achieving sustainability. When groundwater production was reduced from the 2015–2017 average production rates, simulated future groundwater elevations in the Subbasin recovered to elevations that remained above the minimum threshold after 2040 (see Section 2.4.5). The long-term production rate necessary to maintain groundwater elevations above the minimum threshold depended on several factors, including the simulated future climate, the quantity of surface water available to recharge the Subbasin, and the number of projects undertaken. Therefore, the numerical groundwater simulation results suggest a range of potential reductions in groundwater production that will maintain groundwater elevations above the minimum thresholds. This range is anticipated to change as additional data are collected and additional projects are implemented over the next 5 years. Therefore, any reductions implemented by the FCGMA Board over the initial 5-year period after the GSP is adopted will be evaluated and may be changed as warranted by future conditions in the Subbasin.

Relationship to Measurable Objectives

The relationship between Reduction in Groundwater Production and the measurable objectives is similar to the relationship between Reduction in Groundwater Production and the minimum thresholds. Numerical groundwater model simulations suggest a range of potential groundwater production rates that would result in groundwater elevations that are higher than the measurable objective half of the time and lower than the measurable objective half of the time (see Section 3.5, Measurable Objectives). As discussed previously, this range is anticipated to change as additional data are collected and additional projects are implemented over the next 5 years. Therefore, any reductions implemented by the FCGMA Board over the initial 5-year period after the GSP is adopted will be evaluated and may be changed as warranted by future conditions in the Subbasin.

5.7.3 Expected Benefits of Management Action No. 1

The primary benefit related to Reduction in Groundwater Production is recovery of groundwater elevations that have historically allowed for seawater intrusion in the Oxnard Subbasin. Reduction in Groundwater Production can be used to close any differential between groundwater elevations that can be obtained through implementation of projects and the groundwater elevations necessary to prevent future net seawater intrusion in the UAS and the LAS.

5.7.4 Timetable for Implementation of Management Action No. 1

The FCGMA Board already has the authority to reduce groundwater production in the Subbasin. Therefore, reductions can be implemented within months of GSP adoption, once the proposed reductions have gone through the FCGMA Board approval process.

5.7.5 Metrics for Evaluation of Management Action No. 1

The metric for evaluation of Reduction in Groundwater Production will be groundwater elevations in the UAS and the LAS. As groundwater elevations recover, additional projects are developed, and basin management is optimized, groundwater production rates will continue to be evaluated and adjusted accordingly.

5.7.6 Economic Factors and Funding Sources for Management Action No. 1

Program administration, investigations, inspections, compliance assistance, and enforcement of the Reduction in Groundwater Production management action will rely on funding from pumping fees imposed by FCGMA. Economic factors that will affect Reduction in Groundwater Production include impacts to the users of groundwater in the Subbasin. Potential economic impacts to stakeholders will be considered in the decision process for selecting future groundwater production rates and reductions necessary to meet the sustainability goal for the Subbasin.

5.7.7 Management Action No. 1 Uncertainty

Groundwater production from the Oxnard Subbasin has resulted in historical seawater intrusion, and groundwater model simulations indicate that sustainable groundwater production rates will need to be lower than historical rates to prevent net seawater intrusion in each aquifer system after 2040. Nevertheless, uncertainty remains regarding the exact reductions in groundwater production required to achieve the sustainability goals for the Subbasin. Uncertainty in the hydrogeologic conceptual model and the numerical groundwater model is discussed in Chapter 2 of this GSP. Uncertainty in the minimum thresholds and measurable objectives is discussed in Chapter 3. Chapters 2 and 3 also discuss uncertainty associated with the future location of groundwater production and impacts of projects that will optimize management of the Subbasin.

Because of the existing uncertainty associated with future conditions in the Subbasin, a plan for exact reductions and groundwater elevation triggers for those reductions has not been developed as part of this GSP. Instead, FCGMA will work to develop this plan over next 20 years, as the level of uncertainty is reduced. FCGMA recognizes that a specific long-term plan that incorporates stakeholder feedback and the need for flexibility in groundwater management will have to be adopted by 2040 to provide users of groundwater in the Subbasin with the tools necessary to plan for sustainable groundwater production into the future.

5.8 MANAGEMENT ACTION NO. 2 – WATER MARKET PILOT PROGRAM

A Water Market Pilot Program is currently being conducted by the FCGMA as a means of increasing operational management of groundwater in the Subbasin. The pilot program will run through July 2019 and may be extended to October 2019 (FCGMA 2019). The program is open to agricultural operators in the Oxnard Subbasin who are authorized by FCGMA to participate. Participants are able to submit anonymous bids and offers to an electronic trading desk that matches potential buyers and sellers. Matching takes place at 4:00 p.m. on Friday each week of the pilot program (FCGMA 2019). Transfer of extraction allocation will be reported to FCGMA by the Exchange Administrator.

Trades are limited by both geography and quantity. Transfers that result in a net increase in the total market allocation for participants in the Saline Water Intrusion Management Area or Pumping Depression Management Areas are not allowed. Additionally, participants with a well located in the Saline Water Intrusion Management Area may receive a transfer of market allocation only from another participant with a well in the Saline Water Intrusion Management Area. The same is true for participants in the Pumping Depression Management Areas.

Analysis of the Water Market Pilot Program will be conducted and its suitability for incorporation as a management action for the Subbasin will be determined after the pilot program is completed in July 2019.

1 Introduction and Lay Description

This chapter provides a brief overview of the City of Oxnard (City) and the purpose of this Urban Water Management Plan (UWMP). It also describes how the UWMP is organized and how it relates to other local and regional planning efforts that the City is involved in.

IN THIS SECTION

- Introduction for City
- California Water Code
- UWMP Organization
- UWMPs in Relation to Other Efforts
- Funding Eligibility

1.1 Introduction for City

The City of Oxnard is a retail urban water supplier located in Ventura County on the Oxnard Plain. Through its Public Works Department, the City provides potable water service to residential, commercial, industrial, institutional, irrigation, and other customer classes within its water service area. The City also manages recycled water and wastewater systems that support broader water resource planning efforts.

The City's water service area is not identical to the City limits, and this Urban Water Management Plan evaluates water demands, supplies, and reliability based on the water service area served by the City. In 2025, the City served approximately 206,822 people through 44,621 metered potable connections and supplied approximately 22,977 acre-feet of potable water.

Oxnard relies on a diverse water supply portfolio that includes local groundwater, imported water, treated groundwater, and recycled water resources. This UWMP describes the City's existing water system and planning assumptions and evaluates long-term water supply reliability under normal, single-dry-year, and multiple dry-year conditions.

The City operates under a council-manager form of government, with policy direction provided by the City Council and water system operations managed through the City's Public Works Department.

1.2 California Water Code

In 1983, the State of California Legislature (Legislature) enacted the Urban Water Management Planning Act (UWMP Act). The law required an urban water supplier providing water for municipal purposes to more than 3,000 customers or serving more than 3,000 acre-feet per year (AFY) to adopt a UWMP every five years. This UWMP must demonstrate water supply reliability under both normal and drought conditions. The UWMP Act applies to wholesale and retail water suppliers.

Since the original UWMP Act was passed, it has undergone significant expansion. Prolonged droughts, groundwater overdraft, regulatory revisions, and changing climatic conditions affect the reliability of each water supplier as well as statewide water reliability overseen by California Department of Water Resources (DWR), the State Water Resources Control Board (SWRCB), and the Legislature. Accordingly, the UWMP Act has grown to address changing conditions. The current requirements are found in Sections 10610-10656 and 10608 of the California Water Code (CWC).

DWR provides guidance for urban water suppliers by preparing an Urban Water Management Plan Guidebook 2025 (Guidebook) (California Department of Water Resources, 2026) , conducting workshops, developing tools, and providing program staff to help water suppliers prepare comprehensive and useful water management plans, implement water conservation programs, and understand the requirements of the CWC. Suppliers prepare their own UWMPs and submit them to DWR. DWR then reviews the plans to make sure they have addressed the

requirements; they submit a report to the Legislature summarizing the status of the plans for each five-year cycle. The Guidebook was used to complete this 2025 UWMP.

The purpose of this UWMP is for the City to evaluate long-term resource planning and establish management measures to ensure adequate water supplies are available to meet existing and future demands. The UWMP provides a framework to help water suppliers maintain efficient use of urban water supplies, promote conservation programs and policies, ensure that sufficient water supplies are available for future beneficial use, and provide a response mechanism during drought conditions or other water supply shortages.

The UWMP is a valuable planning tool used for multiple purposes, including:

- Providing a standardized methodology for water utilities to assess their water resource needs and availability.
- Serving as a resource to the community and other interested parties regarding water supply and demand, conservation, and other water-related information.
- Providing a key source of information for cities and counties when evaluating proposed new developments and preparing regional long-range planning documents, such as city and county General Plans.
- Informing other regional and Statewide water planning efforts, such as Integrated Regional Water Management Plans and the California Water Plan.

CWC 10632 also includes requirements for suppliers to prepare a Water Shortage Contingency Plan (WSCP). The WSCP documents a supplier's plans to manage and mitigate an actual water shortage condition, should one occur because of drought or other impacts on water supplies. The WSCP is a standalone document that can be updated independently of the UWMP but is referenced and attached to the 2025 UWMP. The WSCP is summarized in Section 8 and provided in Appendix A.

1.3 UWMP Organization

The 2025 UWMP is organized as follows:

Section 1 – Introduction and Lay Description

This section provides background information on the UWMP process, new regulatory requirements, and an overview of the information covered throughout the remaining sections.

Section 2 – Plan Preparation

This section provides information on the processes used to develop the UWMP, including coordination and outreach efforts, the steps taken to prepare City's 2025 UWMP, hold a public hearing, adopt, submit, and implement the 2025 UWMP.

Section 3 – System Description

This section describes the City's water system, service area, population demographics, local climate, and land uses.

Section 4 – Water Use Characterization

This section describes and quantifies the current and projected water uses through 2050 within the water service area.

Section 5 – SBX7-7 Baselines, Targets, and 2025 Compliance

This section describes compliance with the Water Conservation Act of 2009, also known as Senate Bill 7 of Special Extended Session 7 (SBX7-7).

Section 6 – Water Supply Characterization

This section describes and quantifies the current and projected potable and non-potable water supplies.

Section 7 – Water Service Reliability and Drought Risk Assessment

This section describes the water service reliability through 2050 and includes the Drought Risk Assessment (DRA) for the next five years.

Section 8 – Water Shortage Contingency Plan

This section includes an overview of the standalone WSCP. The complete WSCP is included as Appendix A.

Section 9 – Demand Management Measures

This section describes City's efforts to promote conservation and reduce water demand, including discussions of specific demand management measures.

1.4 UWMPs in Relation to Other Efforts

This UWMP characterizes water use, estimates future demands and supply sources, and evaluates supply reliability for normal, single-dry, and five consecutive dry years. The UWMP also requires a standalone WSCP, which is summarized in Section 8.

The City is organized into many departments that provide a variety of services. The Water Division of Public Works led development of this UWMP and coordination efforts with other departments within the City, such as the Community Development Department. As such, the UWMP coordinated with or utilized information from a variety of local or regional sources that are summarized in Section 2.2.

Previous planning efforts that heavily influenced the development of this UWMP include:

Water Resource Management Plan

At the time of development of the 2020 UWMP, a Water Resource Management Plan was prepared to address strategic options for reliable long-term water supply planning (Gannett Fleming for the City of Oxnard, May 2021). The 2025 UWMP considers the Water Resource Management Plan for supply and demand information in conjunction with other resources and information from City staff for consistency across City planning efforts. Considering this information, future expansion of the City's Advanced Water Purification Facility (AWPF) and

development of the Aquifer Storage and Recovery (ASR) program are key components to provide a reliable, resilient supply in the future. The expanded AWPF and ASR together will help to offset reduced groundwater allocations, should that occur with the current groundwater adjudication legal process, and is planned to be used for indirect potable reuse.

Climate Action and Adaptation Plan (CAAP)

The CAAP was adopted by the City in December 2022. The CAAP was developed by Environmental Science Associates (ESA), Inc. and the City's Planning Department to address and align with Senate Bill 32 and other legislative mandates. The CAAP provides a roadmap for how the City will reduce greenhouse gas emissions for the impacts of climate change on public health, infrastructure, ecosystems, equity, and public spaces in the community.

Water Shortage Contingency Plan

The UWMP characterizes water use, estimates future demands and supply sources, and evaluates supply reliability for normal, single-dry, and consecutive dry years. The UWMP Act also requires reevaluation of the City's WSCP. A summary of the various components of the WSCP is provided in Chapter 8, while the complete, standalone WSCP is available in Appendix A.

1.5 UWMPs and Grant or Loan Eligibility

For a water supplier to be eligible for a grant or loan administered by DWR, the supplier must have a current UWMP on file that meets the requirements set forth by the CWC. A current UWMP must also be maintained by the supplier throughout the term of any grants or loans received. The City has prepared the 2025 UWMP under guidance from DWR's 2025 UWMP Guidebook (California Department of Water Resources, 2026).

1.6 Demonstration of Consistency with the Delta Plan

The Delta Plan is a comprehensive, long-term, legally enforceable plan guiding how federal, state, and local agencies manage the Sacramento–San Joaquin Delta's (Delta's) water and environmental resources. The Delta Plan was adopted in 2013 by the Delta Stewardship Council. Delta Plan Policy WR P1 identifies UWMPs as the tool to demonstrate consistency with state policy to reduce reliance on the Delta for a supplier that carries out or takes part in a covered action. A covered action may include activities such as a multiyear water transfer, conveyance facility, or new diversion that involves transferring water through, exporting water from, or using water in the Delta. As a supplier that receives imported water from the Delta through its wholesale supplier, the City will submit information as outlined in Appendix C of the UWMP Guidebook (State of California Department of Water Resources, 2026).

To document and quantify supplies contributing to reduced reliance on the Delta watershed and improved regional self-reliance, a number of steps must be taken, including:

- Setting a baseline
- Change in delivery of Delta water

- UWMP WR P1 consistency reporting

DWR does not review this analysis as part of the UWMP approval process; therefore, this information is attached as Appendix B.

2 Plan Preparation

This plan was prepared using guidance from the DWR 2025 UWMP Guidebook. This chapter provides details regarding the City's UWMP preparation, and the coordination and outreach efforts conducted.

IN THIS SECTION

- Basis for Preparing a Plan
- Regional Planning
- Coordination and Outreach

2.1 Basis for Preparing a Plan

As mentioned in Section 1, the CWC requires suppliers with 3,000 or more service connections, or those supplying 3,000 AFY or more to prepare a UWMP. Suppliers are required to update UWMPs at least once every five years on or before July 1, in years ending in six and one, incorporating updated and new information from the five years preceding each update. The City's 2025 UWMP must be submitted to DWR by July 1, 2026.

The City is preparing an individual UWMP and is not a member of a Regional Alliance. In 2025, the City served approximately 206,822 people in its service area, through 44,621 metered potable connections and supplied approximately 22,977 AFY of potable water to customers. The City has included all mandatory 2025 data in the development of this UWMP. The City does not sell or purchase water from other suppliers, though it wheels water from Calleguas Municipal Water District (Calleguas) to Port Hueneme Water Agency (PHWA).

Throughout this UWMP, water volume is represented in units of AFY, unless otherwise noted, and data is presented on a calendar year basis.

Table 2-1: DWR 2-1R Public Water Systems

PUBLIC WATER SYSTEM NUMBER	PUBLIC WATER SYSTEM NAME	NUMBER OF MUNICIPAL CONNECTIONS 2025	VOLUME OF POTABLE WATER SUPPLIED 2025, AFY

Table 2-3: DWR 2-3 Agency Identification

TYPE OF SUPPLIER	YEAR TYPE	FIRST DAY OF YEAR		UNIT TYPE
Retailer	Calendar Years	**01**	**01**	Acre Feet (AF)

2.2 Coordination and Outreach

The UWMP Act requires a water purveyor to coordinate the preparation of its UWMP with other appropriate agencies in and around its service area. This includes other water suppliers that

share a common source, water management agencies, and relevant public agencies. The City has prepared this UWMP in coordination with its State Water Project wholesale provider, Calleguas. The City has also reached out to nearby water agencies for input and regional consistency, including United Water Conservation District (United), and the Port Hueneme Water Agency (PHWA).

All relevant entities, including the County of Ventura, were sent 60-day notices of preparation and consideration for adoption at a public hearing prior to the adoption of the 2025 UWMP. Copies of the letters and other outreach correspondence are provided in Appendix D. Organizations notified of the City's effort to update this UWMP are summarized Table 2-5: DWR 2-4 Water Supplier Information Exchange Table 2-5. Public hearing notices are provided in Appendix E.

In 2025, the City received approximately 33% of its supply from imported water from Calleguas and 36% from United. Calleguas is a regional wholesaler that obtains their water from the Metropolitan Water District of Southern California (Metropolitan) and other local sources. United obtains their water from the Oxnard groundwater subbasin.

Table 2-4. Agency Coordination

* This table will be updated after public review and adoption.

As mentioned, the City held several stakeholder outreach meetings to provide opportunities to review development of the UWMP and WSCP.

Important dates for outreach and engagement are listed below:

- Public Draft UWMP released for review – May 2026
- Published Public Hearing Notices - Vida Newspaper published on May 28, 2026, and June 4, 2026
- City Public Works and Transportation Committee reviews– May 26, 2026
- Council Meeting conducts Public Hearing and adopts Final UWMP and WSCP – Jun 16, 2026

Table 2-5: DWR 2-4 Water Supplier Information Exchange

WHOLESALE WATER SUPPLIER NAME
Calleguas Municipal Water District
United Water Conservation District

2.3 Completed Steps for UWMP and WSCP

The City adopted the 2025 UWMP with the WSCP. Both were made available for public review in May/June 2026 and a public hearing was held on June 16, 2026 to receive public input on the draft documents. The public hearing notices are attached as Appendix E.

The City Council adopted the 2025 UWMP and the WSCP at a public meeting on June 16, 2026. The resolution of adoption is included in Appendix F.

This WSCP was submitted to DWR through the WUEData portal before the deadline of July 1, 2026. This WSCP will be available to the public on the City website.

If the City identifies the need to amend this UWMP or WSCP, it will follow the same procedures used previously for notification to cities, counties, and the public and for initial adoption.

3 System Description

This section describes the City's water system, service area, population demographics, local climate, and land uses.

IN THIS SECTION

- General Description
- Service Area Boundary Map
- Service Area Climate, Demographics, and Socioeconomics
- Land Uses

3.1 General Description

The Public Works Department manages the potable water, recycled water and wastewater systems for the City. The water system includes a mix of residential, commercial and industrial customers. The surrounding area, the Oxnard Plain, is distinctive for its year-round agricultural production.

3.2 Service Area Boundary Maps

Figure 3-1 shows the City service area boundary map and surrounding area. The service area has changed slightly since the 2020 UWMP.

Figure 3-1. City of Oxnard Service Area

3.3 Service Area Climate

Oxnard's climate is characterized as a dry, sub-tropical climate, mainly due to its proximity to the Pacific Ocean. Table 3-2 presents average climate data for the service area, including temperature, precipitation, and reference evapotranspiration (ETo). As shown in Table 3-2, the warmest month of the year is August with an average temperature of 66.6 degrees Fahrenheit (°F), while the coldest month of the year is December with an average temperature of 54.3°F.

The annual average precipitation within Oxnard's service area is about 10 inches. As shown in Table 3-2, the majority of rainfall occurs in November through March. December is typically the wettest month with an average rainfall of approximately 2.3 inches.

Table 3-1. Average Monthly Climate Data, 2010-2024

MONTH	AVERAGE PRECIPITATION (INCHES)	AVERAGE ETO (INCHES)	AVERAGE AIR TEMPERATURE (°F)
January	1.6	2.5	55.8
February	1.2	2.9	54.5
March	1.9	3.9	55.8
April	0.59	4.8	58.0
May	0.21	5.3	59.5
June	0.14	5.4	62.9
July	0.26	6.1	66.2
August	0.49	5.7	66.6
September	0.28	4.5	65.7

November	0.85	2.8	58.2
December	2.3	2.2	54.3
ANNUAL AVERAGE TOTAL:	**10.3**	**49.7**	**60.1**

[1]CIMIS weather station 152 in Camarillo; https://cimis.water.ca.gov/.

3.4 Service Area Population, Demographics, and Socioeconomics

3.4.1 Population and Housing

The City's water service area boundary differs from the City limits boundary. Projections of the population within the City's water service area are based on estimates from the 2020 U.S. Census Bureau and the Southern California Association of Governments (SCAG). A geographic information systems (GIS) analysis of 2020 Census data was used to determine the City's 2020 service area population and derive a 2020 persons per connection factor (4.72). This factor was then multiplied by the number of connections in 2021-2025 to estimate the water service area population. To project the population served by the City from 2030 to 2050, average annual population growth rates from SCAG projections were applied to the 2025 estimate. SCAG projected a slight increase in population from 2019 to 2035 (averaging 0.64% per year) and a slight increase in population from 2035 to 2050 (averaging 0.12% per year).

SCAG also estimated future households considering the Regional Housing Needs Assessment (RHNA). RHNA establishes housing needs for each jurisdiction over the applicable planning period. SCAG adopted the 6th Cycle RHNA Allocation Plan, which covers the planning period from October 2021 through October 2029 (Southern California Association of Governments (SCAG), March 2021). SCAG's population and household projections inform the RHNA Allocation Plan and are used in the determination and allocation of housing needs, including lower income housing, for individual jurisdictions. The growth projections in this UWMP are based on SCAG projections for the service area and therefore also incorporate the lower income housing projections.

The City's Water Department coordinated with the City's Community Development Department to ensure the population projections provided in this UWMP align with SCAG and other City planning efforts. SCAG describes a recent increase in accessory dwelling units (ADUs). As reported in the City's General Plan Annual Report (City of Oxnard, 2025) in 2025, 244 ADUs were issued a building permit, and 174 were constructed and occupied. The City's Housing Element projects the development of 283 ADUs during the 2021 - 2029 cycle. To date, over 800 permits have been issued for the construction of ADUs and 469 ADUs have been constructed. Therefore, the City has met its Housing Element projections and will significantly exceed that projection.

Estimated current and projected future population and households for the City's service area are included in Table 3-2.

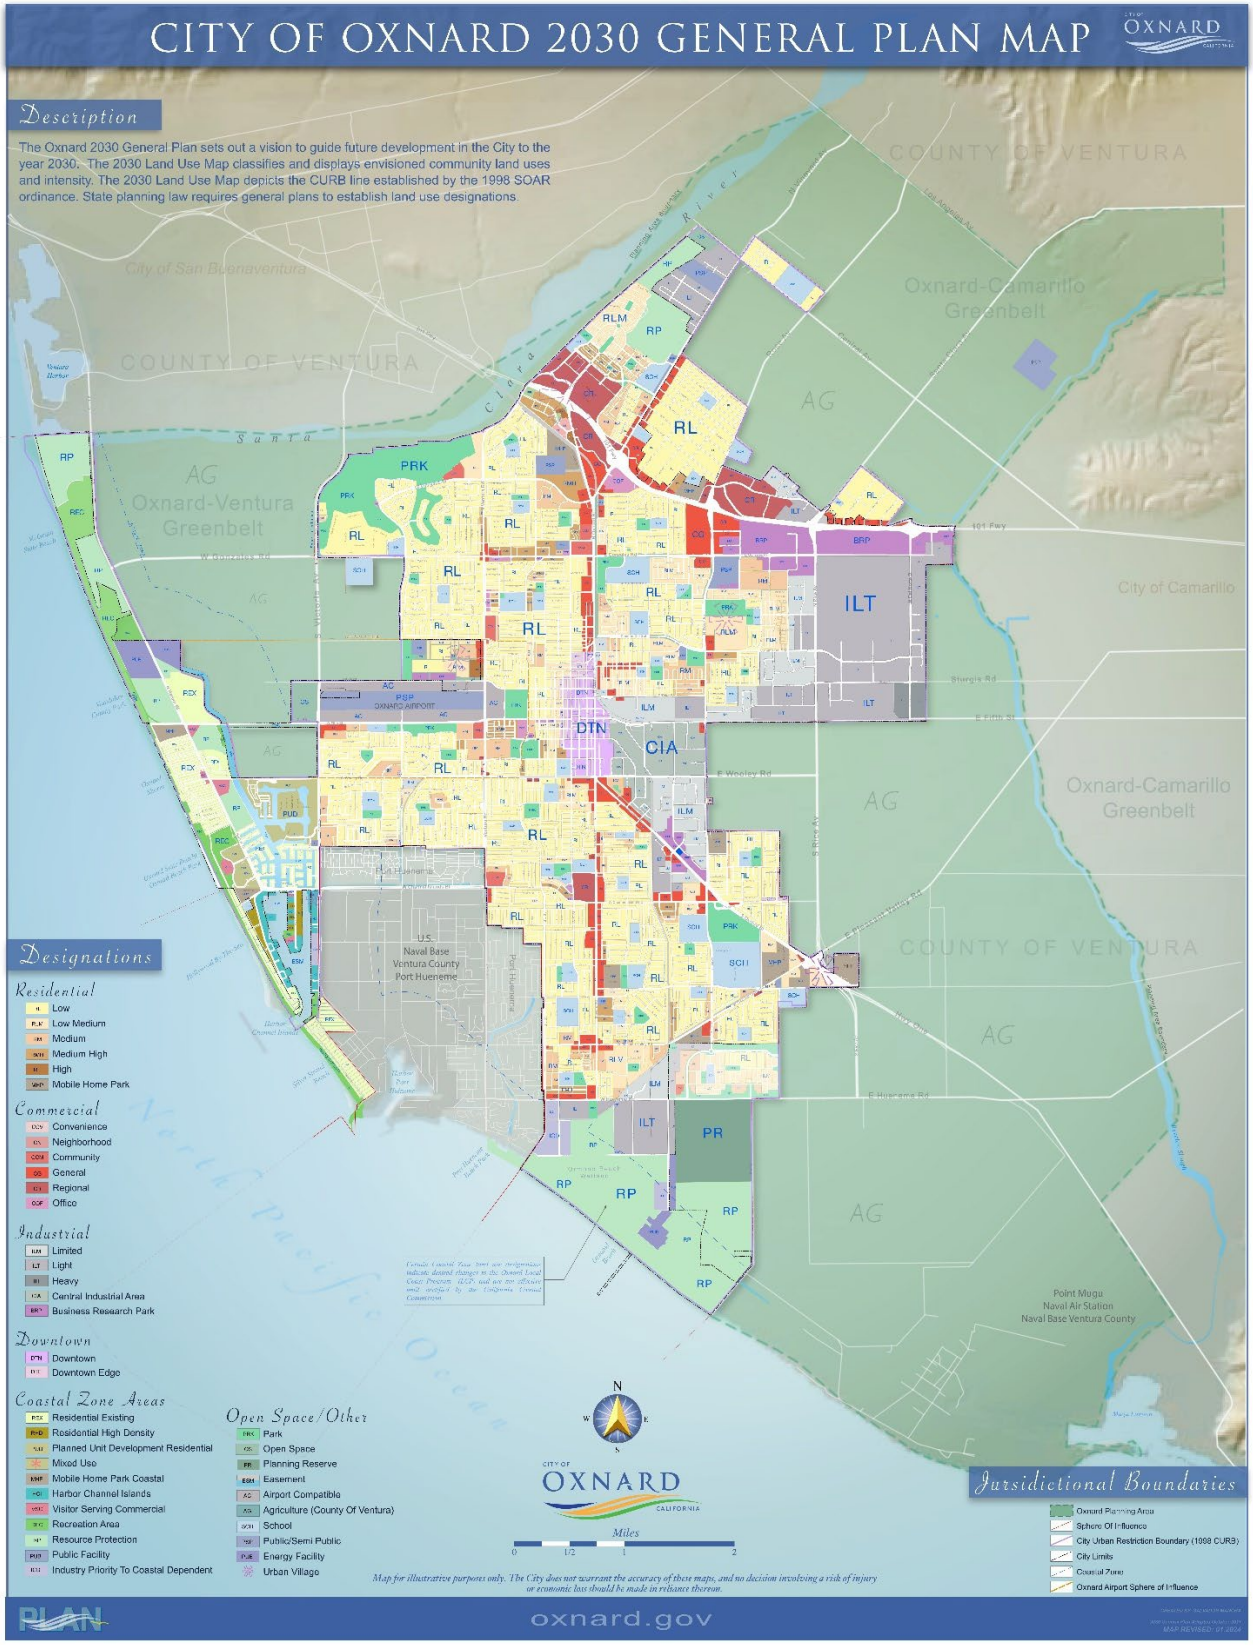
Table 3-2: Historical, Current, and Projected Population

YEAR	TOTAL CITY POPULATION[1]	POPULATION SERVED BY THE CITY	SCAG HOUSEHOLDS ESTIMATE
2015	205,512	198,207	-
2020	202,063	198,563	54,471
2021	203,405	198,945	55,544
2022	204,746	199,426	56,616
2023	206,088	197,464	57,689
2024	207,430	197,879	58,761
2025	208,771	206,822	59,834
2030	215,479	213,585	65,196
2035	222,188	220,348	70,559
2040	223,556	221,728	70,592
2045	224,925	223,108	70,626
2050	226,294	224,488	70,660

[1] Total City population was estimated by applying the SCAG population growth rate (described in text above) (Southern California Association of Governments (SCAG), March 2021) to the 2020 US Census population estimate for the City (US Census Bureau, 2024).

3.4.2 Other Social, Economic, and Demographic Factors

According to the US Census Bureau, the estimated median income of City residents in 2024 was $96,212 (in 2024 dollars) (US Census Bureau). The estimated poverty rate was 11.0%. An estimated 68.9% of persons aged 25 or higher hold a high school degree or higher (US Census Bureau). Only 12.2% of the population of the City of Oxnard was estimated to be aged 65 or over according to the US Census Bureau's 2024 QuickFacts (US Census Bureau). The owner-occupied housing rate (2020-2024) was estimated to be 54.4% and the median value of owner-occupied housing units was estimated to be $652,700 (US Census Bureau).



3.5 Land Uses within Service Area

The City serves many different types of users, mainly single-family residences. Other land uses include multi-family residential, commercial, and institutional, industrial, landscape irrigation, and agricultural irrigation. The City's 2030 General Plan summarizes anticipated land uses. These are shown in Figure 3-2 (City of Oxnard, 2014). As described previously, the City prepared population projections based on 2020 Census and SCAG projections.

SCAG prepares demographic forecasts based on land use data through an extensive process that emphasizes input from local planners in coordination with local or regional land use authorities, including the City, incorporating essential information to reflect anticipated future populations and land uses. SCAG's projections undergo extensive local review, incorporate zoning information from city and county general plans, and are supported by Environmental Impact Reports. In advance of publication of SCAG's latest estimates (as part of SoCal Connect

2024), SCAG met with each jurisdiction individually, including the City, to review the demographic forecasts. This review process incorporated feedback from the City Community Development Department, to help align the demographic forecasts with current land use and anticipated land use changes.

Figure 3-2. City of Oxnard General Plan Designation Areas

4 Water Use Characterization

This section describes and quantifies the City's past, current, and future water use through 2050. The City provides potable and recycled water to nearly 43,000 service connections. In 2025, the City delivered approximately 21,000 AFY of potable water to its customers (excluding water losses). In the past five years, the City has delivered as much as 25,000 AFY to its customers in any single calendar year (excluding water losses).

IN THIS SECTION

- Non-Potable Versus Potable Water Use
- Worksheets and Reporting Tables
- Water Use for Lower Income Households
- Climate Change Considerations

4.1 Past, Current, and Projected Water Use by Sector

4.1.1 Water Use Sectors Listed in Water Code

Water suppliers are required to identify water uses for each of the applicable water use sectors identified in CWC 10631(d). The City primarily serves potable water to customers, though it does supply a small amount of recycled water. Recycled water uses are described in Section 6.2.7.

The City serves the following water uses:

Single Family Residential

Single family residential customers are typically on a lot with a free-standing building containing one dwelling unit that may include a detached secondary dwelling.

Multi-Family Residential

Multi-family residential customers are typically multiple dwelling units within one building or several buildings within one complex.

Commercial/Institutional

The City tracks commercial and institutional customer water uses as one. Commercial customers typically provide or distribute a product or service and institutional water customers are typically public services, such as higher-education institutions, schools, courts, churches, hospitals, government facilities, and nonprofit research institutions.

Landscape Irrigation

The City tracks the water use for landscape irrigation.

Industrial

The City tracks the water used by industrial customers.

Agricultural Irrigation

This consists of irrigation used for agriculture.

Other – Fire Hydrants

This consists of metered water from fire hydrants.

Sales/Transfers/Exchanges to Other Agencies

The City transfers State Water Project (SWP) water from Calleguas to PHWA.

Losses

Distribution system water losses are the water losses from the point of water entry to the distribution system to the delivery point to the customer's system. Water losses are discussed in Section 4.1.3.

4.1.2 Past and Current Water Use

The average annual potable water consumption by the City's customers over the last five years is approximately 23,000 AFY. Approximately 37% of Oxnard's total potable deliveries were to single family residences, followed by 21% to commercial and institutional customers and 15% to multi-family residences from 2021 to 2025. These percentages do not consider potable water transferred by the City from Calleguas to PHWA. Figure 4-1 and Table 4-1 summarize historical water consumption by customer class. Over the last five years, the City has provided an average of approximately 400 AF to PHWA annually.

Figure 4-1. Historic Water Consumption

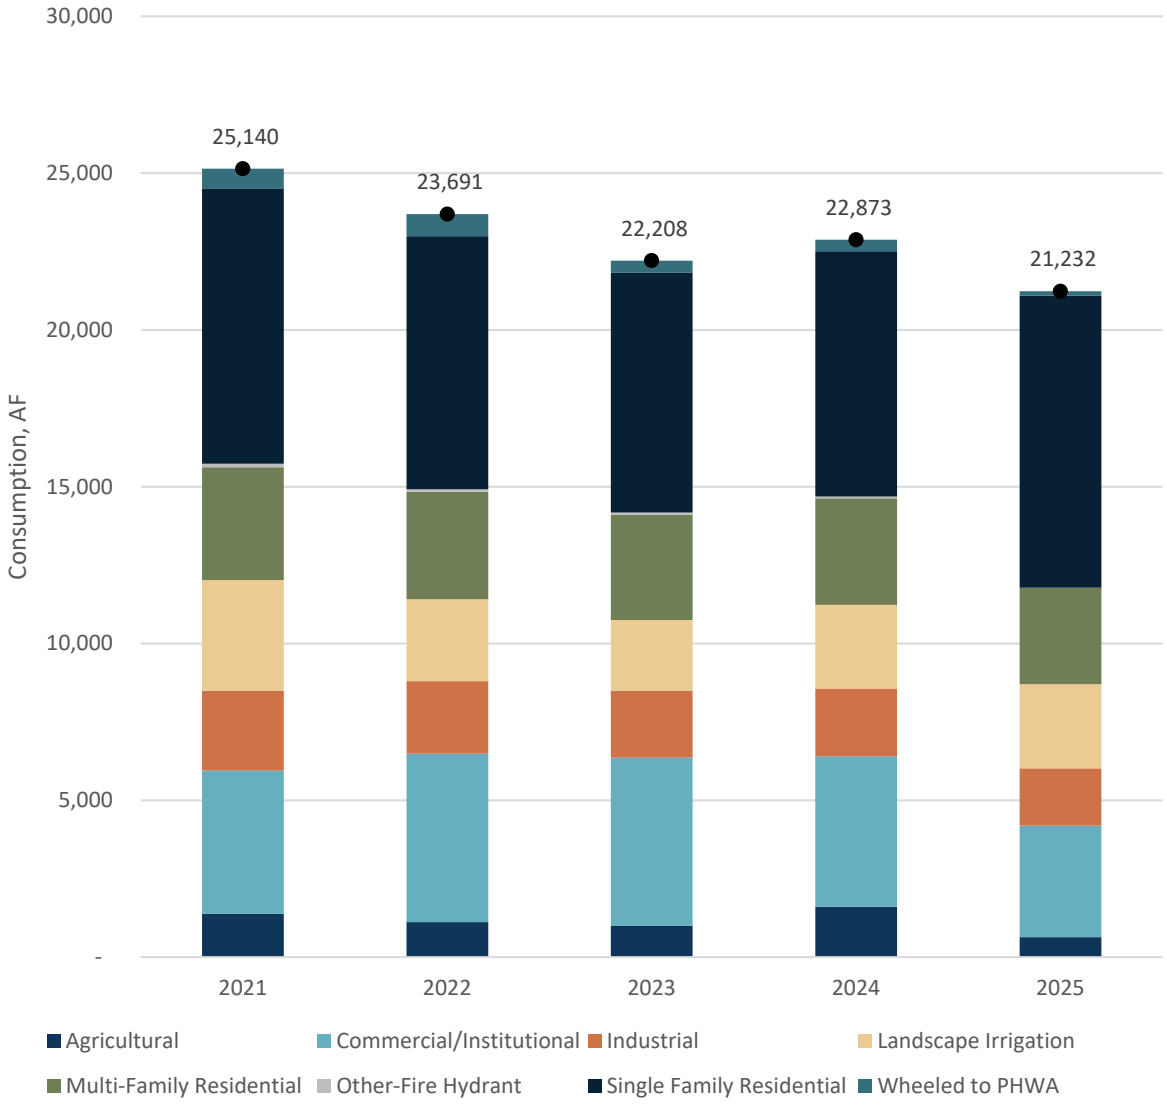


Table 4-1. DWR 4-1R Actual Demands for Water, 2025, AFY

4.1.3 Distribution System Water Losses

Distribution system water losses are the physical potable water losses from the point of water entry to the distribution system to the point of delivery to the customer's system. Water loss can result from aging infrastructure, leaks, seepage, theft, metering inaccuracies, data handling errors, and other causes. Addressing water losses can increase water supplies and recover revenue. The City monitors its water loss and prepares an annual AWWA Water Audit to estimate the volume of water loss. The City has submitted all required water loss audits to the State, as shown in Table 4-2

Table 4-2: DWR 4-5R Month Water Loss Audit Reporting

CWC Section 10608.34 required the SWRCB to develop water loss performance standards for urban retail water suppliers to minimize water waste through system leaks. Water loss performance standards were developed through a rulemaking that became effective in 2023. Under the regulations, each supplier will be required to comply, by 2028, with an individualized volumetric water loss standard based on real loss, using the economic model developed by the SWRCB and the supplier's own unique data. Real loss is the physical loss of water from water distribution systems, as opposed to apparent losses, which are revenue losses due to meter inaccuracies, billing errors or unauthorized consumption. A supplier's baseline water loss is calculated as the average water loss from at least 3 of the 4 water loss audits from 2017 – 2020. The real water loss performance standard is based on gallons per service connection per day (gpscd), or gallons per mile of pipe per day (gpmd), depending on how the supplier reports real loss. Post-2028 compliance with volumetric water loss standards will be assessed every three years based on the average of the supplier's real loss from the preceding three years, with an allowed variation of 5 gallons per connection per day above the supplier's water loss standard. Apparent loss standards are equal to the baseline apparent loss and compliance is evaluated at the same time as compliance with the Real Water Loss Performance Standard.

Although the compliance period has not yet started, CWC Section 10631 (d)(3)(C) requires water suppliers to provide data in the UWMP to show whether the supplier met its SWRCB water loss performance standard.

Based on data released by the State on January 30, 2026, the City's baseline real water loss is 26.6 gpscd and the real water loss standard is 18.0 gpscd, and the apparent loss standard is the baseline of 12.1 gpscd. As shown in Table 4-3, based on the most recent water loss audit from 2024, the City has not yet met the real water loss performance standard, but is working toward that goal by 2028 (see Section 9.2.5). Section 9 discusses the City's programs to assess and manage distribution system real loss.

Table 4-3: DWR 4-6R Progress Towards 2028 Water Loss Standard

Public System ID # Reported in Submittal Table 2-1R	Did the Water Board Calculate a Water Loss Standard for this Public System?	2028 Real Water Loss Standard per Unit per day	Units for Real Water Loss Standard	Number of Units	Volume of Total Real Water Loss (from AWWA Water Loss Audit)	2025 or Most Recent Year Real Water Loss per Unit per Day	2028 Apparent Water Loss Standard per Unit per Day	Units for Apparent Water Loss	Number of Connections	Volume of Total Apparent Loss (from AWWA Water Loss Audit)	2025 or Most Recent Year Apparent Water Loss per Unit per Day
CA5610007	Yes	18.0	gpscd	44,621	1,004	20.1	12.1	gpscd	44,621	528	10.6

4.1.4 Projected Water Use

The "Making Conservation a California Way of Life" Regulation (CWOL Regulation) establishes unique water budget-based Urban Water Use Objectives (UWUO) for each urban retail water supplier in the State. The CWOL Regulation requires suppliers to calculate an annual UWUO consisting of these core components:

> UWUO = Residential Indoor Water Use Budget + Residential Outdoor Water Use Budget + Commercial, Industrial, and Institutional (CII) Dedicated Irrigation Meters (DIM) Outdoor Water Use Budget + Real Water Loss Budget

Each component has associated water efficiency standards that become increasingly stringent through 2040 as shown in Table 4-4. The key standards are residential indoor GPCD, Landscape Efficiency Factors (LEF), and real water loss measured in gpscd. Annually updated supplier-specific input data is also required for population, climate, landscapes, and real water losses. The UWUO does not include some uses, such as CII indoor use or other uses that are considered "Excluded Demands".

Table 4-4. Water Efficiency Standard by Reporting Period

Year	Residential Indoor GPCD	Residential Outdoor LEF	CII DIMs	Real Water Loss Budget[1]
FY 23/24	55	0.8	Actual Reported "Landscape" Volume	Actual Reported or Budget
FY 25/26	47	0.8	Actual Reported "Landscape" Volume	Actual Reported or Budget
FY 30/31	42	0.8	0.8 LEF (starts July 1, 2028)	Budget (starts July 1, 2027)
FY 35/36	42	0.63	0.63 LEF	Budget
FY 40/41	42	0.55	0.45 LEF	Budget

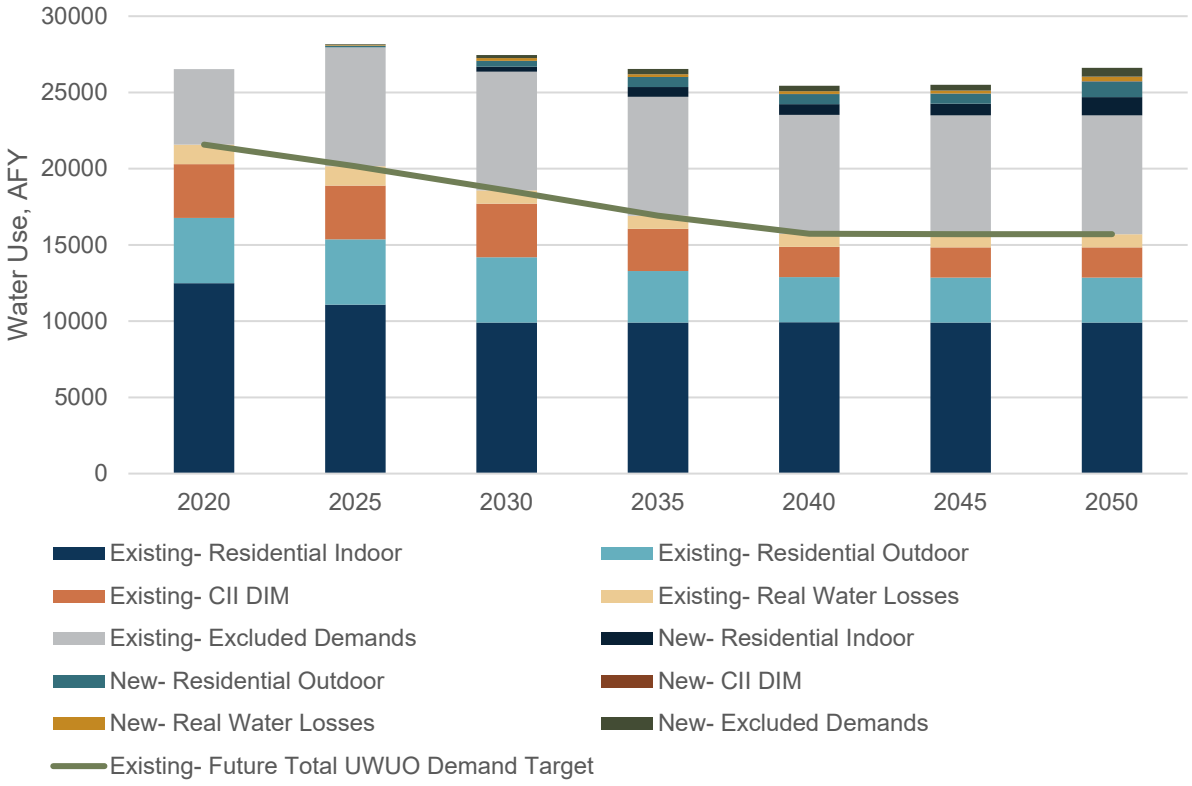
[1] Budget = Supplier standard for real water loss (gallons per service connection per day) applied to total service connections.

DWR and the SWRCB have developed an annual reporting framework, tools, and guidance for calculating the UWUO and comparing it to the actual use for that year. The SWRCB's "Water Use Objective Exploration Tool" allows users to enter varying efficiency standards and baseline year(s) of input data to calculate and visualize a comparison of historic demand to the UWUO

with selected standards. The SWRCB 's "Annual UWUO and Water Use Report" tool pre-populates input data and standards for the given reporting year. To project demands for this UWMP, a demand tool that aligns with the framework, data, and calculations of the SWRCB's tools was used and expanded to allow for forecasting future years' demand considering future efficiency standards, supplier input data, and growth assumptions.

Supplier input data and growth assumptions used in this UWMP for future years are shown in Table 4-5. Projected growth for residential indoor usage is associated with population projections described in Section 3.4. Residential landscape area growth is associated with connections growth scaled with SCAG's housing projections described in Section 3.4. The historic landscape area provided by the State in its UWUO tools was divided by the 2025 residential service connections to create a landscape area per connection factor that was applied to future connections to account for growth. All non-residential connections were assumed to scale with historic connections growth rates. Excluded Demand growth was assumed to scale with the ratio of historic Excluded Demand to the UWUO applied to future UWUO estimates. The Real water loss standard is applied to the sum of all projected future connections.

Table 4-5. UWUO Components Growth Comparison



UWUO Component	Supplier Input Data	Input Data for Growth	Associated Assumption
Residential Indoor	Population	2025-2050 population	See Section 3.4
Residential Landscape	Landscape area & annual climate data	2025 Irrigable Irrigated Residential Landscape Area per Service Connection scaled to future connections.	SCAG household projections growth rate applied to connections. Historic average climate data from the State is used for future years.
CII DIM Landscape	Water use	Historic Landscape water use per service connection scaled to future connections.	
Real Water Loss	Connections	Supplier standard for Real Water Loss (gallons per service connection per day) applied to future total connections.	Sum of future connections including UWUO & Excluded Demand categories connections.
Excluded Demand (not included in UWUO but included in total demand)	Water use		Ratio of historic Excluded Demand to UWUO applied to future UWUO estimates.

Future efficiency standards (see Table 4-4) were applied to existing customer residential population, residential landscaped area, CII landscape usage, and total connections. These demand components for existing customers are shown to reduce over time as the standards become more stringent. Excluded demands were assumed to grow at the ratio of historic Excluded Demand to the UWUO. The most stringent standards in Table 4-4 for FY 40/41 were applied to all new growth connections for all time periods, recognizing that new construction will comply with efficient building codes. The resulting projected UWUO, excluded demands, and total demands for both existing and new growth connections are shown in Table 4-6 and Figure 4-2.

Table 4-6. UWUO Projections by Component, AFY

	2030	2035	2040	2045	2050
Existing- Residential Indoor	9,902	9,902	9,929	9,902	9,902

Figure 4-2. UWUO Projections by Component, AFY

While the City intends to meet the UWUO, it was also considered that demands may continue in alignment with historic patterns initially and take more time than anticipated to reach direct alignment with the UWUO. Therefore, demands used for the purposes of supply reliability planning are assumed to trend from a historic baseline pattern downward to the UWUO by 2050.

A historic baseline demand per connection per customer type is used to approximate current "normal" demand patterns representative of a range of conditions for influential factors impacting demand, known as "demand drivers". A key demand driver is rainfall. Ideal baseline years incorporate impacts of dry and wet years since demand typically fluctuates with rainfall due to the need for more irrigation in dry years and less in wet years. For this UWMP, a baseline period of 2021-2024 is used, which captures two wet years and two dry years. Using demands in these years, a baseline water use was established for each connection type, then reduced at a constant rate to meet the UWUO water use for that connection type by 2050.

Figure 4-3 shows the UWUO and the baseline trend to the UWUO projection scenarios and Table 4-7 presents the projected demand by customer type through 2050 for this UWMP.

Figure 4-3. Historic and Projected Demand Scenarios

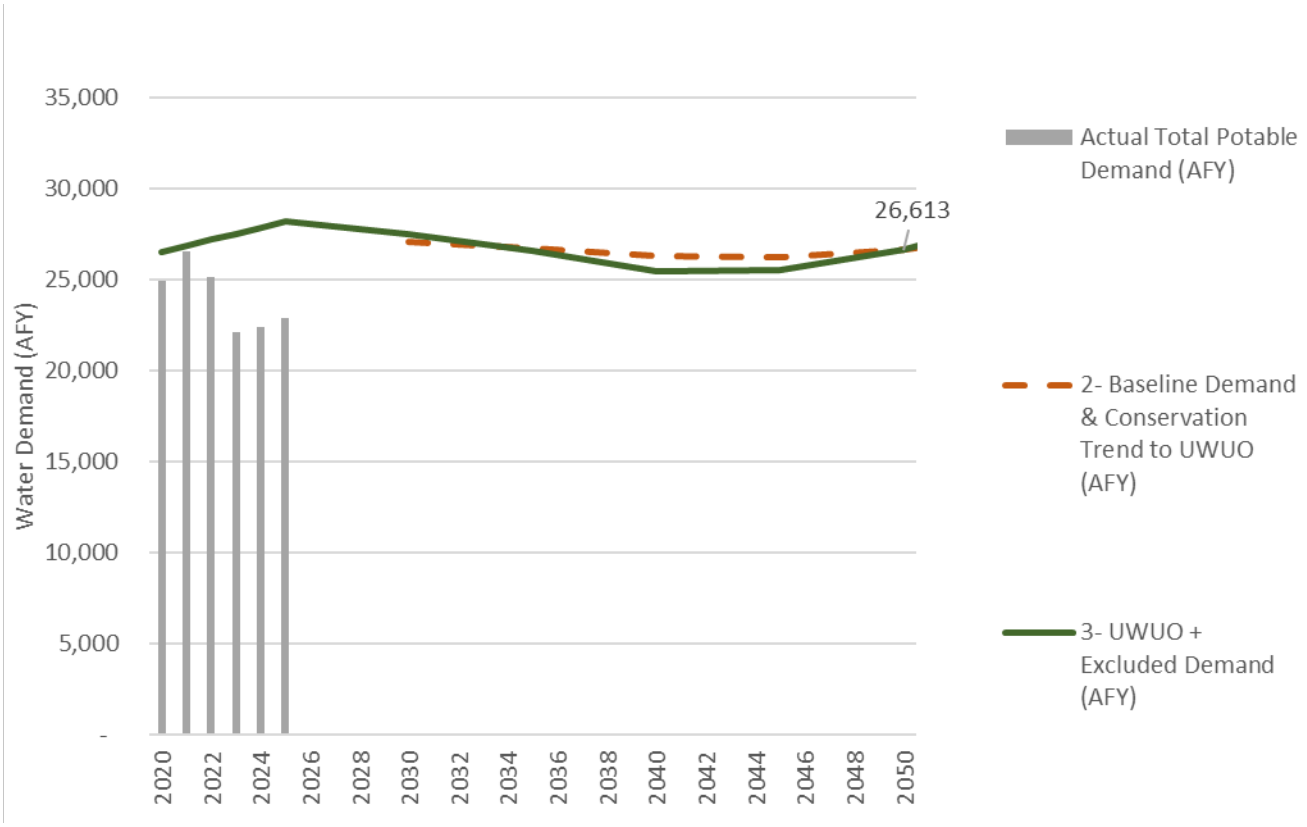

Table 4-7. DWR 4-2R Projected Demands for Water

			Projected Water Use				
Use Type	Additional Description	Level of Treatment When Delivered	2030	2035	2040	2045	2050
Single Family		Potable	8,727	8,158	7,392	6,700	6,075
Multi-Family		Potable	3,859	3,607	3,269	2,963	2,686
Commercial		Potable	5,372	5,372	5,372	5,372	5,372

Losses		Potable	2,084	2,238	2,244	2,252	2,260
Total			**27,024**	**26,732**	**26,268**	**26,212**	**26,613**

The City transfers water from Calleguas to PHWA through the Oxnard-Hueneme (O-H) Pipeline. This occurs through the Three-Party Agreement, which will expire in 2036, although PHWA demands are anticipated to continue past this date. Projected PHWA demands used in the 2020 UWMP were developed as part of the City's Water Resources Master Plan, which was being finalized circa the time of the writing of the 2020 UWMP. The projections included in Table 4-8 were developed by reducing the projections from the 2020 UWMP to account for reductions in groundwater pumping and an associated reliance on imported water.

Table 4-8. Projected Demands for Water, Transferred Water

			Projected Water Use				
Use Type	Additional Description	Level of Treatment When Delivered	2030	2035	2040	2045	2050
Sales/Transfers/ Exchanges to Other Suppliers	Transferred to PHWA	Potable	492	521	563	589	604

Table 4-6, Table 4-7, and Table 4-9 satisfy the requirement to include anticipated water conservation savings when developing future demand projections since they account for water efficiency standards set by the State for the UWUO. Conservation savings were considered and included in developing demand estimates for the next 25 years. However, the City considers projected demand to plan for supply reliability if demands continue in alignment with historic patterns rather than in direct alignment with the UWUO. The City is complying with and planning for UWUO standards as described in Sections 5 and 9.

Senate Bill 1087 requires that water use projections in a UWMP include projected water use associated with single family and multi-family residential housing for lower income households, as identified in the housing elements of any city, county, or city and county within the supplier's service area. As described in Section 3.4, SCAG's population and household projections inform the RHNA Allocation Plan and are used in the determination and allocation of housing needs, including lower income housing, for individual jurisdictions. The growth projections in this UWMP are based on SCAG projections for the service area and therefore also incorporate lower income housing projections.

Table 4-9. DWR 4-3R Inclusion in Water Use Projections

Are Future Water Savings Included in Projections?	Yes
Are Lower Income Residential Demands Included in Projections?	Yes

4.2 Climate Change Considerations

Oxnard is an active participant in the Watersheds Coalition of Ventura County (WCVC) Integrated Regional Water Management Plan (IRWMP) (amended in 2019) and references Appendix K of the WCVC IRWMP. The WCVC IRWMP includes a future climate analysis for Ventura County, completed in 2019, by a partnership between WCVC and the Western Regional Climate Center, Desert Research Institute. The report analyzed 32 Global Climate Models that had been statistically downscaled using the Localized Construction Analogs

(LOCA) method to examine projected changes in temperature, precipitation, and evapotranspiration for 2021-2040 compared to a baseline period of 1950-2005. The results of the analysis concluded that coastal areas (like Oxnard) will see an average increase in temperature of 2-3°F and a projected 5-10% increase in evapotranspiration. The climate models estimate average annual precipitation to remain relatively the same, but the pattern of rainfall will likely change. The climate analysis estimates that the number of dry days will increase, and precipitation will be reduced by 7% in the winter, 11% in the spring, and 20% in the fall. Since average annual precipitation is not expected to change very much but the number of dry days is expected to increase, precipitation will likely fall in shorter durations but at greater intensities. This slight shift in precipitation patterns may impact groundwater recharge and how surface water is conveyed, captured, and stored within Ventura County. Additional impacts of climate change will likely extend wildfire season, increase post-fire flash floods and debris flow, increase maximum temperature and overnight minimum temperatures, and increase evaporative demand and affect agricultural production, such as which crops are economical, alter ecosystem functionality, and increase drought susceptibility (N.S. Oakley, B.J. Hatchett, D. McEvoy, and L. Rodriguez, June 2019).

5 SB X7-7 Baselines, Targets, and 2025 Compliance

This section describes compliance with the Water Conservation Act of 2009, also known as Senate Bill 7 of Special Extended Session 7 (SBX7-7). The section demonstrates compliance with the 2020 SBX7-7 target and discusses future water use efficiency requirements.

IN THIS SECTION

- SBX7-7 Forms and Tables
- 2020 Compliance

5.1 Compliance and Future Water Use Efficiency Requirements

SBX7-7 was incorporated into the UWMP Act in 2009 and required that all water suppliers increase water use efficiency with the overall goal to decrease per-capita water consumption within the state by 20 percent by the year 2020.

SBX7-7 required DWR to develop certain criteria, methods, and standard reporting forms through a public process that water suppliers could use to establish their baseline water use and determine their water conservation targets. SBX7-7 and DWR's *Methodologies for Calculating Baseline and Compliance Urban Per Capita Water Use* (State of California Department of Water Resources, 2021) specify methodologies for determining the baseline water demand, 2015 interim urban water use target and the 2020 urban water use target for the City as described in the 2020 UWMP. This section also demonstrates that the City achieved its 2020 water use target.

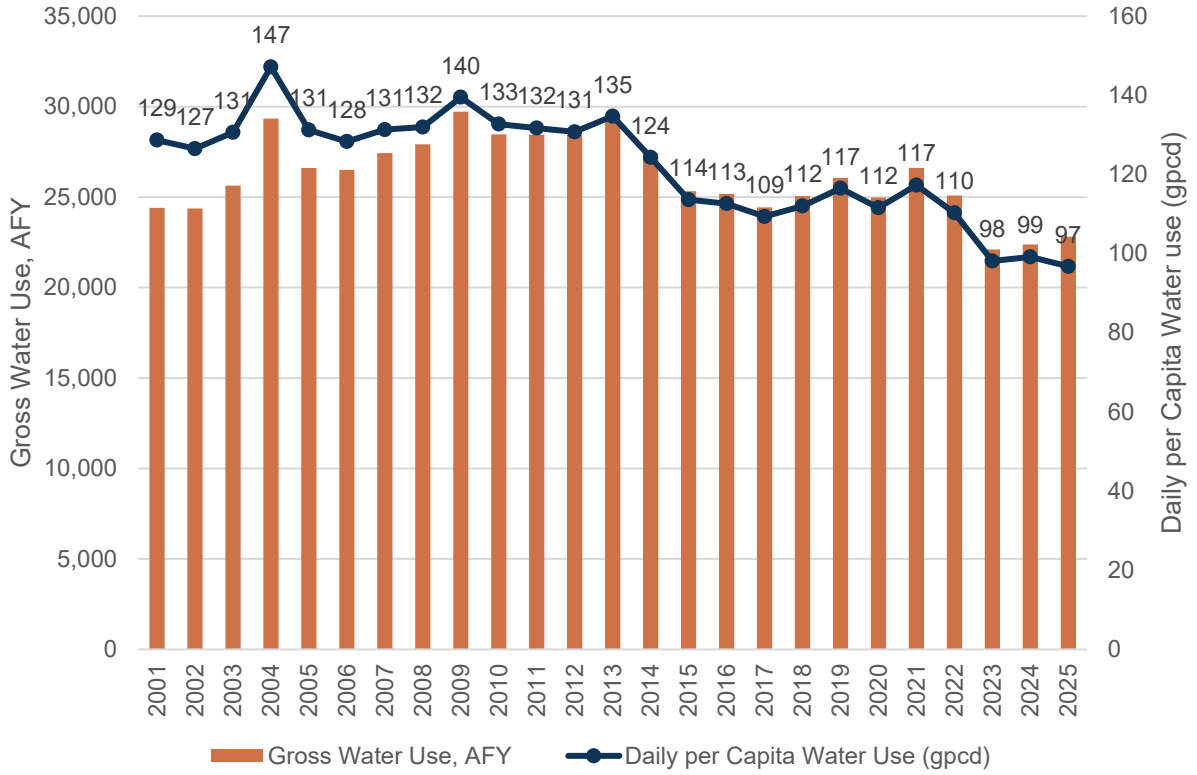

Table 5-1 below establishes the City's 2020 actual and 2020 target GPCD. As shown, the City met its 2020 target. Most recently, in 2025, the water use was 97 GPCD, which is well below the 2020 target of 140 GPCD.

Table 5-1. SB X7-7 2020 Target Progress

2020 Target GPCD	2020 Actual GPCD	Did Supplier Achieve Target?
140	116	Yes

Figure 5-1 below shows gross water use and daily per capita water use from 2001 to 2025. This includes water received from Calleguas which is ultimately sent to PHWA.

Figure 5-1. Historic Gross Water Use and Per Capita Water Use

New water use efficiency standards from CWOL Regulation supersede SBX7-7 standards. In 2018, two policy bills were enacted by the California Legislature, Assembly Bill 1668 (AB1668, Friedman) and Senate Bill 606 (SB606, Hertzberg), collectively referred to as the "2018 Water Conservation Legislation." Based on the 2018 Water Conservation Legislation, related legislation, and subsequent adoption of the CWOL Regulation, each urban retail water supplier must comply with its UWUO. DWR and the SWRCB have developed a reporting framework for calculating the UWUO and compliance annually with efficiency standards becoming increasingly stringent through 2040.

The demand projections in this UWMP are based on the City meeting its estimated future UWUO, as described in Section 4.1.4. The City will plan and implement necessary demand management measures (described in Section 9) to support meeting the UWUO. DMMs and UWUO compliance planning enhance resiliency for drought and other water shortage conditions as described in Sections 7, 8, and 9.

6 Water Supply Characterization

This section describes and quantifies the City's current and projected potable and non-potable water supplies. It provides a narrative description of each supply source and quantifies the supply availability for each supply source identified. The City's water supply consists of three sources: imported surface water from Calleguas, local groundwater from United, and local groundwater from City wells.

IN THIS SECTION

- Water Supply Analysis Overview
- Water Supply Characterization
- Energy Intensity

6.1 Water Supply Analysis Overview

The City obtains water supplies from several sources: City groundwater, United groundwater, and imported Calleguas water. Additionally, Oxnard produces recycled water at its Advanced Water Purification Facility (AWPF). A simple schematic of the various supply sources for the City is shown in Figure 6-1.

The City extracts groundwater from the Oxnard Plain Groundwater Basin (Oxnard Basin) using their own wells and through an agreement with United. United extracts additional groundwater , on behalf of the City, which helps mitigate seawater intrusion. The City then imports water from Calleguas that is blended with the groundwater to conserve costs and to meet the City's demands. All three of these sources are utilized in normal and dry years.

The City is also working with neighboring agencies and the Fox Canyon Groundwater Management Agency (FCGMA) to ensure the sustainability and reliability of the groundwater basin in the future. Copies of the Groundwater Sustainability Plan (GSP) and a Periodic Evaluation of the GSP are available on the websites shown below:

- GSP: https://fcgma.org/oxnard-subbasin-gsp-files/ (Dudek, December 2019)
- Revised First Periodic Evaluation Groundwater Sustainability Plan for the Oxnard Subbasin (Dudek, January 2025): https://fcgma.org/gsp-periodic-evaluations/

The volume of water utilized from each source in 2025 is summarized in Table 6-1.

Figure 6-1. Supply Schematic

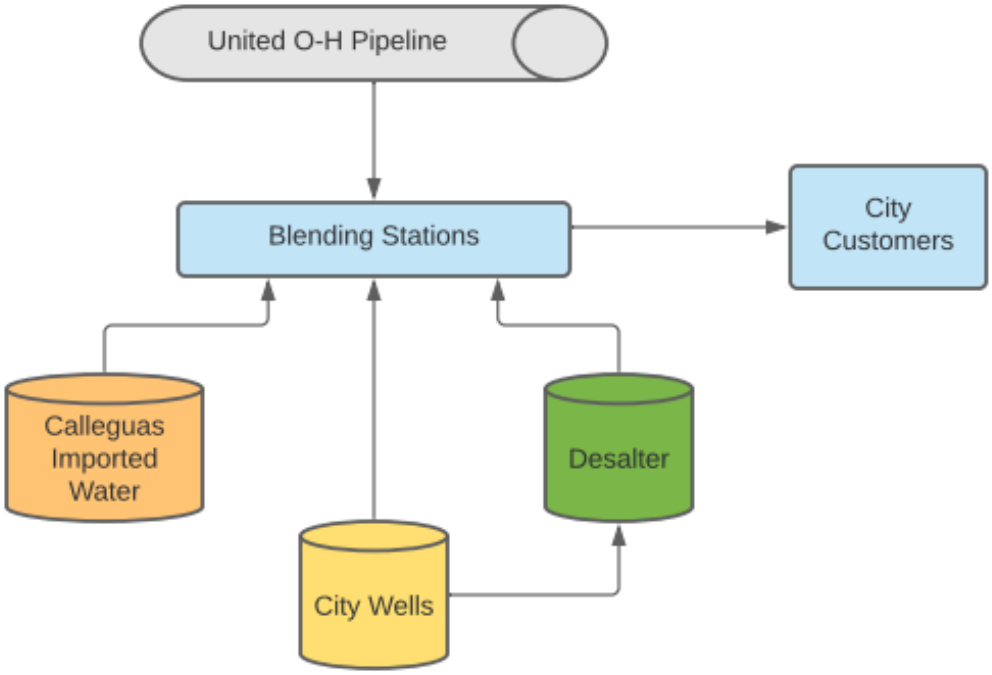

Table 6-1: DWR 6-8R Actual Water Supplies

		2025	
WATER SUPPLY	ADDITIONAL DETAIL ON WATER SUPPLY	ACTUAL VOLUME, AFY	WATER QUALITY
Groundwater (not desalinated)	City	7,077	Drinking Water
Groundwater (not desalinated)	United	8,278	Drinking Water
Purchased or Imported Water	Calleguas	7,485	Drinking Water
Purchased or Imported Water	Wheeled to PHWA	138	Drinking Water
	TOTAL:	**22,977**	

6.2 Water Supply Characterization

This section provides further guidance on the water supply availability and narrative required under the Water Code.

6.2.1 Purchased or Imported Water

The City has imported an average of 8,065 AFY from Calleguas in the last five years. The City purchases imported water from Calleguas, a regional wholesale agency. Calleguas obtains State Water Project (SWP) water from Metropolitan. The City tries to minimize the amount of imported water from Calleguas to minimize costs and water rates. Until recently, Calleguas employed a tiered water rate structure, and the City operated to remain below the Tier 1 threshold to conserve costs. Since the 2020 UWMP, Calleguas has effectively eliminated their tiered rate structure. The City continues to try to minimize use of this supply source. Water from Calleguas is blended with other sources by the City to help improve water quality. For this reason and to meet hydraulic objectives, there is a minimum amount of water that the City uses and plans to use from Calleguas.

Historically, SWP supplies met Calleguas' imported water needs, but drought and low snowpack have reduced allocations. In 2022, consecutive 5% allocations led Metropolitan to implement emergency conservation measures, limiting outdoor watering in Calleguas' service area until early 2023 when rainfall improved conditions. SWP reliability is expected to decline and become more variable due to climate change (Water Systems Consulting, Inc., 2026). In 2022, the City's monthly allocation from Calleguas was 1,304.9 AF, or 15,660 AFY. For reference, the City used 8,479 AFY of Calleguas supply in 2022.

Metropolitan's 2025 UWMP water reliability assessment anticipates reliable supplies in all year types. However, for more conservative planning, Calleguas' water reliability assessment incorporates the rapid onset of climate change impacts that are expected to increase the variability of future SWP supply, including increased frequency and duration of drought periods (Water Systems Consulting, Inc., 2026).

In years one through four of a five-year drought, Calleguas projects sufficient supplies to meet demand. In the fifth consecutive drought year, Calleguas supplies are projected to be insufficient to meet the projected unconstrained demand. Therefore, Calleguas assumes a 15% reduction to match supply availability (Water Systems Consulting, Inc., 2026).

As a result, the City is focused on additional supply sources and anticipates that in a water shortage emergency, it is possible that Calleguas would supply water to customers 100% reliant on them prior to serving water to the City. Calleguas' planned options to address emergency allocations are described in Calleguas' 2025 UWMP (Water Systems Consulting, Inc., May 2026) and 2025 WSCP (Water Systems Consulting, Inc., May 2026) as described in more detail in Section 7.2. Calleguas is subject to Metropolitan's supply reliability as discussed in the next section. Calleguas is also working to improve reliability of its supplies and system resilience, including its Water Supply Alternatives Study and Water Resources Implementation Strategy

that recommended multiple new local supply projects. Oxnard participated in both regional studies and is implementing multiple projects to increase its groundwater supply, as described in the remainder of this chapter, that were included in these planning studies.

6.2.1.1 Metropolitan Water District of Southern California

Metropolitan faces several challenges in providing adequate, reliable, and high-quality supplemental water supplies for southern California, including dry hydrologic conditions and Sacramento-San Joaquin River Delta issues. Metropolitan's 2025 UWMP indicates that supply reliability is increasingly challenged by growing dependence on climate-stressed imported supplies (Colorado River and SWP), compounded by hydrologic variability, regulatory and infrastructure risks, and the need to actively manage shortages under prolonged drought conditions. As described in Metropolitan's draft 2025 UWMP, it is investing in multiple projects and programs to mitigate against these vulnerabilities (Metropolitan Water District of Southern California, 2025). This includes recent investments in the planning and design of the Delta Conveyance Project to mitigate risks in the Sacramento-San Joaquin Delta, investments in drought action projects to improve system constraints, and core supply and storage projects to improve reliability.

6.2.2 Groundwater

The City extracts groundwater from the Oxnard Basin during normal and dry years and currently has access to groundwater supplies through both City production wells and groundwater produced by United on the City's behalf. Over the last five years, City pumping and groundwater from United from the basin averaged approximately 7,500 AFY and 8,200 AFY, respectively, totaling 15,700 AFY. The City has a current total groundwater allocation of 17,464 AFY. Groundwater remains an important component of the City's supply portfolio; however, future groundwater availability is subject to basin management requirements, regulatory actions, legal determinations, operational constraints, and water quality considerations.

The FCGMA, acting as the basin management agency under the Sustainable Groundwater Management Act (SGMA) and related authorities, has adopted basin management measures intended to achieve long-term sustainability and address seawater intrusion risk. Details regarding FCGMA and basin management are provided in Section 6.2.3. The groundwater allocation to the City via governances from the FCGMA may change and/or be impacted by active groundwater adjudication or requirements pursuant to SGMA. As such, the volume of groundwater availability may change but specific estimates of future allocation for Oxnard are unknown at the time this UWMP was prepared.

The GSP and subsequent First Periodic Evaluation of the GSP evaluated multiple future groundwater pumping and sustainable yield scenarios using updated groundwater flow modeling. The evaluation does not assign City-specific groundwater production estimates or allocations. Future groundwater availability for the City remains uncertain and is subject to basin-wide management actions and future FCGMA regulatory decisions. Therefore, for

planning purposes, it is assumed that the City's groundwater allocation will change at a rate commensurate with basin-wide historic baseline pumping and sustainable yield scenario estimates.

The GSP identifies approximately 69,000 AFY of groundwater pumping during the 2015–2017 baseline period and describes that continuation of this pumping level would result in ongoing seawater intrusion, indicating that the baseline condition is unsustainable. The First Periodic Evaluation refines the GSP's long-term sustainable yield estimates under four future condition groundwater flow modeling scenarios, including "Projects", "Basin Optimization", "Future Baseline with EBB" (United's Extraction Barrier and Brackish (EBB) Water Treatment project), and "Future Projects with EBB", with a wide range of estimated sustainable yields. Oxnard Basin potential sustainable yield scenarios and estimated percentage reductions from a 2015-2017 baseline are shown in Table 6-2.

Table 6-2. Oxnard Subbasin GSP & First Periodic Evaluation Sustainable Yield Scenarios

	2019 GSP	First Periodic GSP Evaluation			
Historic pumping (2015–2017 avg)	Sustainable Yield	No New Projects	Basin Optimization	Projects	EBB*
69,000	39,000	44,700	52,300	49,400	68,200
Reduction from 2015-2017	-43%	-35%	-24%	-28%	-1%

* United's Extraction Barrier and Brackish (EBB) Water Treatment project

The "Projects" scenario in Table 6-2 incorporates plans for projects to improve and expand the City's AWPF, so it was chosen to represent the future scenario aligned closest with the City's supply planning assumptions described in this UWMP. For planning purposes, it is assumed that the City's groundwater availability under the "Projects" scenario's sustainable yield will result in an approximate 28% reduction from baseline conditions to 9,540 AFY by 2040. This approach is consistent with the GSP's basin-wide framework and the absence of assigned agency-specific sustainable yield allocations. However, it is important to note that there are a wide range of potential future scenarios in which the city may be subject to higher or lower allocation reductions. For UWMP planning purposes, the 28% reduction assumption strikes a balance between worst- and best-case scenarios.

Because the magnitude, timing, and implementation of future allocation reductions may be affected by future FCGMA actions, basin conditions, administrative decisions, and ongoing legal or regulatory proceedings, the groundwater reduction assumptions used in this UWMP should be understood as planning assumptions rather than fixed entitlements or guaranteed future pumping levels. For the same reason, this UWMP does not assume that any additional drought-year reduction would automatically apply on top of long-term basin reductions unless and until such reductions are formally established. Likewise, use of groundwater storage allocations,

carryover amounts, or similar credits is assumed only to the extent authorized under then-current FCGMA rules, resolutions, orders, or other applicable actions in effect at the time of use. Where future access to such amounts depends on agency approval or changing basin conditions, that access remains uncertain for planning purposes.

Groundwater supply reliability is also influenced by water quality and operational factors. The City currently operates a desalter and blends local groundwater with imported water to manage total dissolved solids (TDS) and ensures drinking water quality objectives. Future groundwater quality may be affected by salinity, basin conditions, regulatory requirements, treatment performance, and related operational considerations. In addition, certain groundwater management requirements and related matters are currently subject to dispute and litigation, the outcome of which is uncertain. Accordingly, the City will continue to monitor basin management developments, water quality conditions, and legal and regulatory actions and will adapt operations and future planning assumptions as needed.

6.2.2.1 United Groundwater

As mentioned in the previous section, approximately 8,200 AFY has been extracted from the basin on average in the last five years by United on behalf of the City and delivered through the O-H pipeline. This agreement helps the City and other coastal agencies mitigate seawater intrusion. Rather than pump near the coast, the City obtains water from the O-H pipeline that conveys groundwater extracted from wells further inland. The O-H Pipeline Agreement between United and the City provides the City with 50.47% of the total pipeline capacity (26.75 cfs) (AECOM for the City of Oxnard, 2015).

The groundwater extracted by United and delivered to the City via the O-H Pipeline is also subject to FCGMA and uncertainty about future groundwater supply conditions and sustainable yield as described above for City groundwater. This source also requires blending for desired levels of TDS. It is important to note that United's Draft 2025 UWMP assumes "United's future supply estimates for the Oxnard-Hueneme (OH) System are based on the scenarios that include EBB, which will not require allocation reductions" (United Water Conservation District, April 2026). While the City recognizes that this could be a potential future groundwater condition, the City's UWMP as described in the previous section, assumes a more conservative supply planning approach for reliability, resiliency, and cost efficiency planning purposes.

6.2.2.2 Basin Description

The Oxnard Basin underlies the City of Oxnard and the Point Mugu Naval Air Station in southern Ventura County. The Oxnard Basin is bounded by the Mound and Santa Paula subbasins and the Oak Ridge fault line to the north, the Las Posas Valley Basin to the north east, the Pleasant Valley Basin to the east and the Pacific Ocean to the west. The basin is of alluvium with semi-permeable rocks from the Santa Monica Mountains (California Department of Water Resources). The extent of the Oxnard Basin and surrounding local basins is shown in Figure 6-2. The Oxnard Basin is an alluvial basin containing a collection of interconnected aquifers separated by layers of clay strata. The Oxnard Plain Groundwater Basin can be

generally categorized into three parts: the Oxnard Forebay, the Upper Aquifer System and the Lower Aquifer System. Figure 6-3 provides a schematic profile view of the Oxnard Basin.

The Oxnard Forebay is the unconfined portion of the Oxnard Basin and is generally located along the Santa Clarita River northeast of where Oxnard Boulevard intersects with U.S. Highway 101 in the City of Oxnard. The Oxnard Forebay is the primary means by which the Oxnard Basin is recharged. The Oxnard Forebay is recharged by infiltration from the riverbed of the Santa Clarita River and spreading basins constructed for that purpose. From the Oxnard Forebay, located in the upper most portion of the Oxnard Basin, groundwater is able to seep into the Upper and Lower Aquifer Systems because the clay layers which separate the aquifers are not continuous at this location.

The Upper Aquifer System (UAS) comprises of the upper 500 feet of the confined portions of the Oxnard Basin which includes a semi-perched zone and the Oxnard and Mugu aquifers. The Upper Aquifer system is hydraulically connected to the Pacific Ocean through the Oxnard and Mugu aquifers and is how seawater intrusion enters the Oxnard Basin in periods of overdraft.

The Lower Aquifer System (LAS) includes the deeper confined aquifers including the Hueneme, Fox Canyon, and Grimes Canyon aquifers. The Lower Aquifer System is separated by an approximately 80-foot-thick layer of silty clay which is continuous except near the Oxnard Forebay.

Figure 6-2. Local Groundwater Basins

6.2.3 Groundwater Management

The FCGMA has established a comprehensive groundwater allocation program for the Oxnard and Pleasant Valley Basins, which was initially adopted in 2019 and subsequently amended (2020, 2021, and most recently in 2024) to maintain consistency with legal requirements and to support sustainable groundwater management under SGMA.

The FCGMA has also implemented additional regulatory and management actions in recent years, including the adoption of annual groundwater allocations, basin assessments, and policies to support groundwater sustainability and program funding. In 2023, the Agency adopted provisions related to the accrual, extraction, and transfer of recycled water pumping allocation, which provide additional flexibility for groundwater extraction for the City.

In accordance with SGMA, the FCGMA adopted GSPs for the Oxnard, Pleasant Valley, and Las Posas Valley Basins on December 13, 2019. Since adoption, the FCGMA has continued to implement the GSPs through annual reporting, periodic evaluations, and ongoing refinement of management actions to achieve long-term basin sustainability. The FCGMA Board approved the First Periodic Evaluation of the GSP in December 2024, which was subsequently submitted to DWR in January 2025. Implementation of the GSPs along with associated capital projects and allocation programs is expected to continue to influence groundwater availability within the City's service area.

6.2.3.1 FCGMA Ordinances and Resolutions

The FCGMA has established ordinances and resolutions aimed at protecting the groundwater basins which impact groundwater use and pumping and thus, the City. As mentioned previously, the FCGMA adopted a GSP for the Oxnard Basin in December 2019 to comply with the SGMA, signed into law in 2014, and approved the First Periodic Evaluation of the GSP in January 2025. The GSP and Periodic Evaluation establish groundwater sustainability goals and identify projects and management actions to achieve the goals by 2040.

Key FCGMA ordinances and resolutions which impact groundwater pumping for municipal and industrial water supply are described in Table 6-1. In addition, several resolutions direct groundwater management related to the City's use of recycled water in lieu of pumping groundwater.

Table 6-3: Key FCGMA Ordinances and Resolutions

ORDINANCE /RESOLUTION	PARTIES	KEY FEATURES
Fox Canyon Groundwater Management Agency Ordinance Code	FCGMA and all GW users within FCGMA jurisdiction	The ordinance describes FCGMA policy associated with: Registration of Wells and Levying Charges, Installation and use of Flowmeters for groundwater (GW) Extraction, Protection of the Los Posas Basin Management Area, Reduction of GW Extractions, Appeals, Severability and Penalties. Last Amendment January 9, 2015.
Emergency Ordinance E	FCGMA and all GW users within FCGMA jurisdiction	Ordinance E temporarily replaced in-use allocation systems (Historical Allocation (HA) and Baseline Allocation (BA)) for municipal and industrial well operators with a Temporary Extraction Allocation (TEA) that uses average annual extractions from the base period 2003 to 2012. The ordinance sets a series of allocation reductions from the base amount to take effect beginning July 1, 2014, with a 10% reduction. The ordinance required an additional 5% reduction every 6 months through January 2016, resulting in a total of 20%. Ordinance E also required all agricultural well operators to apply for a 25% reduced Efficiency Allocation. An Efficiency Allocation is based on a well operator demonstrating that water used for agriculturally developed land is at least 80% efficient (FCGMA 2011, Resolution No. 2011-04). Ordinance E also contains provisions for the FCGMA Board to undertake additional adjustments to irrigation allowances by resolution. Emergency Ordinance E is still in effect, but the original allocations were replaced by an Ordinance to Establish a New Pumping Allocation System for the Oxnard and Pleasant Valley Basins, effective October 1, 2020.
Resolution 01-03	FCGMA	Establishes formal support to the City GREAT Program that will provide recycled water for injection, direct use, wetland restoration, etc.

ORDINANCE /RESOLUTION	PARTIES	KEY FEATURES
Resolution 03-04	FCGMA and Oxnard	Grants one-acre foot credit to City for each acre foot of recycled water injected.
Resolution 03-05	FCGMA and Oxnard	Grants one-acre foot credit to City for each acre foot of recycled water used in lieu of groundwater.
Resolution 13-02	FCGMA and all Oxnard Recycled Water users within FCGMA jurisdiction	Allows the City to accrue a Recycled Water Pumping Allocation (RWPA) up to 5,200 AFY which allows the City to obtain groundwater in a volume and subject to the conditions of the resolution. Key conditions include: • City receives one AF of RWPA for each AF decrease in groundwater pumping by recycled water users. The City shall pump RWPA from City owned wells and UWCD's O-H system. *Groundwater conditions in the Forebay determine when RWPA's can be pumped.*
Resolution 16-06	FCGMA and all GW users within FCGMA jurisdiction	Establishes policy for brackish groundwater pumping projects.
Resolution 17-02	FCGMA and all GW users within FCGMA jurisdiction	Sets Tiered groundwater extraction surcharge rates: Tier I – Surcharge rate of $1,461.00 per AF on all GW extractions that exceed the combined allocation for all water wells within the Agency by 25-AF or less. Tier II – Surcharge rate of $250.00 per AF on all GW extractions that exceed the combined allocation for all water wells within the Agency by more than 25-AF but less than 100 AF. Tier III – Surcharge rate of $500.00 per AF on all GW extractions that exceed the combined allocation for all water wells within the Agency by 100 AF or more. This Resolution was replaced by Resolution 20-07.
Resolution 19-03	FCGMA and all GW users within FCGMA jurisdiction	Sets groundwater sustainability fee at $11 per AF effective July 1, 2019 and at $14 per AF effective July 1, 2020 to fund the Groundwater Sustainability Program.
Ordinance to Establish a New Pumping Allocation System for the Oxnard and Pleasant Valley Basins	FCGMA and all GW users within Oxnard and Pleasant Valley Basins	Adopted October 23, 2019, this ordinance establishes a new pumping allocation system for the Oxnard and Pleasant Valley Basins, replacing Emergency Ordinance E and Agency Ordinance Code. Effective October 1, 2020, initial extraction allocations were set based on the average annual extractions per well during the 2005 through 2014 base period.

ORDINANCE /RESOLUTION	PARTIES	KEY FEATURES
Resolution 20-05	FCGMA and all GW users within FCGMA jurisdiction	Effective January 1, 2021, this resolution established a fee on groundwater extractions to establish a reserve fund. The reserve fund is planned to be used to cover costs associated with implementing FCGMA's Groundwater Sustainability Program.
Resolution 20-07	FCGMA and all GW users within FCGMA jurisdiction	Effective January 1, 2021, this resolution increased the tiered groundwater extraction surcharge rates. It is anticipated that extraction surcharges will help to discourage the use of groundwater above allocations and assist with ensuring the Oxnard Basin is sustainable.
Resolution 2023-02	FCGMA and all GW users within FCGMA jurisdiction	Establishes groundwater pumping allocations and associated requirements to support implementation of the Oxnard Subbasin Groundwater Sustainability Plan (GSP) and progress toward achieving groundwater sustainability by 2040. The resolution is a regulatory action intended to manage groundwater extraction, reduce overdraft, and protect basin conditions consistent with the Sustainable Groundwater Management Act (SGMA).

6.2.3.2 Groundwater Sustainability Plan

The City has long relied on groundwater from the Oxnard Basin, which provides about 50% to 60% of the City's drinking water. In 1982, in response to the growing threat of seawater intrusion into the coastal groundwater basins, the FCGMA was established by the State Legislature to manage groundwater within the areas or lands overlying the Fox Canyon aquifer for the common benefit of the public and all agricultural, domestic, and municipal and industrial users. Over the following decades, groundwater pumpers under FCGMA's jurisdiction continued to work to prevent further seawater intrusion into these shared groundwater basins.

In 2015, in accordance with the SGMA, FCGMA was identified as the Groundwater Sustainability Agency (GSA) for the basins within its boundaries. Also, as required by SGMA, DWR released a list of critically overdrafted basins throughout the state. When a basin is over-pumped, there are negative effects, such as groundwater depletion, land subsidence and seawater intrusion. Locally, the Oxnard Basin and the adjacent Pleasant Valley Basin qualified as "critically overdrafted," having one or more of the negative effects.

To fulfill its GSA responsibilities, FCGMA adopted GSPs for the Oxnard and Pleasant Valley Basins in December 2019 with the goal of bringing the basins into sustainable groundwater management by 2040. Sustainable groundwater management means avoiding undesirable results related to one or more of the six sustainability indicators:

- Chronic lowering of groundwater levels indicating a significant and unreasonable depletion of groundwater supply.
- Significant and unreasonable reduction of groundwater storage.
- Significant and unreasonable seawater intrusion.

- Significant and unreasonable degraded water quality.
- Significant and unreasonable land subsidence.
- Depletions of interconnected surface water that have significant and unreasonable impacts on the beneficial uses of the surface water.

The GSPs set minimum thresholds for each basin to identify when undesirable results are occurring. The minimum thresholds are groundwater levels measured at key wells. Measurable objectives are also identified in the GSPs. The measurable objectives are the ideal average water levels that should be maintained to protect against dropping below the minimum thresholds during periods of drought. Seawater intrusion is the controlling sustainability indicator; that is, if groundwater levels are maintained to control seawater intrusion, then other undesirable results do not occur.

Sustainable yield is the amount of groundwater that can be extracted from the basins annually without causing undesirable results. The combined sustainable yield of the Oxnard and Pleasant Valley Basins was estimated using a numerical groundwater model for the GSPs. For the Oxnard Basin, sustainable yield was estimated for both the Upper and Lower Aquifer Systems. In recognition of the uncertainties associated with the model as well as the need for more data and time to plan for supply projects, the sustainable yield estimate in the GSP was quantified with a range: 32,000 AFY (+/- 6,000 AFY) for the Upper Aquifer System and 7,000 AFY (+/- 3,600 AFY) for the Lower Aquifer System for a total 39,000 AFY (+/- 9,600 AFY) (Fox Canyon Groundwater Management Agency, 2019).

As described previously, the First Periodic Evaluation of the GSP evaluated basin-wide future groundwater pumping scenarios and updated sustainable yield scenarios using updated groundwater modeling. Future groundwater availability for the City remains subject to basin-wide management actions and future FCGMA regulatory decisions. Therefore, for planning purposes, it is assumed that the City's groundwater allocation will reduce at a rate commensurate with basin-wide historic baseline pumping and the "Projects" scenario's sustainable yield resulting in an approximate 28% reduction from baseline conditions to 9,540 AFY by 2040. However, under SGMA, GSPs must be evaluated at least every five years and amended or revised as appropriate, including incorporating new data and results of updated numerical model scenarios. Minimum thresholds, measurable objectives, and sustainable yield will be revised in future GSP updates based on feasible projects that are ultimately selected for funding and implementation as well as updated or new information including closing of data gaps and uncertainty. Future UWMPs will incorporate these expected updates accordingly.

6.2.4 Past Five Years

Table 6-4 summarizes total groundwater pumped by the City. This does not include groundwater pumped and purchased from United. All or part of the groundwater described below is desalinated.

Table 6-4: DWR 6-1R Groundwater Volume Pumped, AFY

GROUNDWATER TYPE	LOCATION OR BASIN NAME	2021	2022	2023	2024	2025
Alluvial Basin	Oxnard	6,050	8,899	7,540	7,989	7,077
	TOTAL:	**6,050**	**8,899**	**7,540**	**7,989**	**7,077**

6.2.5 Surface Water

Oxnard does not currently utilize any surface water sources.

6.2.6 Stormwater

Oxnard does not currently utilize any stormwater sources.

6.2.7 Wastewater and Recycled Water

Currently, the City sells recycled water to local farmers for irrigation use and receives a one for one groundwater pumping allocation for each acre-feet sold the FCGMA Recycled Water Pumping Allocation (RWPA). The City plans to maximize recycled water as a groundwater recharge supply source to ensure future reliability and supply of high-quality water through the Groundwater Recharge Enhancement and Treatment (GREAT) Program (Carollo for the City of Oxnard, 2017). The GREAT program, when originally developed, aimed to increase reliability of water supply, reduce the costs of water supply (imported sources), improve the dependability in accommodating existing needs and meeting planned growth and demands, and enhance stewardship of the local water supply through recycling and reusing a substantial portion of the region's wastewater. These are still viable objectives for the GREAT program. Additionally, as the groundwater regulatory climate has changed since the original development of the GREAT program, the inclusion of addressing potential groundwater pumping reductions now becomes a key factor that the GREAT program aims to mitigate.

The City constructed an AWPF utilizing microfiltration (MF), reverse osmosis (RO), and an advanced oxidation process (AOP). A summary of these process is provided below:

- **Microfiltration (MF):** The MF system is used to remove particulate and microbial contaminants and reduces the concentration of bacteria through a low-pressure filtration system which consists of MF feed strainers, MF feed water ORP, pH, turbidity and total chlorine residual analyzers. The current MF system has six treatment trains with additional space to build six more if needed. The MF system can maintain a production flow of 6.25 mgd of Reverse Osmosis permeate even with one train out of service.

- **Reverse Osmosis (RO):** The RO system has two parallel skids running with production capacities of 3.125 mgd (additional space is available for 3 RO skids of 6.25 mgd).
- **Advanced Oxidation Process (AOP):** The AOP uses an ultraviolet light and is recognized as the Ultraviolet/Advanced Oxidation and Reduction (UV/AOX) system. The UV/AOX system consists of three Trojan UV Phox D72AL75 reactors to provide an additional barrier and disinfection of the RO permeate. This allows room for expansion for future UV system needs.

The City has outlined future projects to improve and expand the AWPF and create a reliable recycled water supply for indirect potable reuse (IPR). The use of AWPF water as a potable water supply must be demonstrated to water regulatory authorities (California Division of Drinking Water and Los Angeles Regional Water Quality Control Board (RWQCB)) before adding it as a potable source. It is anticipated that the AWPF may provide up to 11,900 AFY of recycled water for IPR. Six aquifer storage recovery (ASR) wells are planned for construction.

6.2.7.1 Recycled Water Coordination

The City of Oxnard is the wastewater provider and has constructed the AWPF to make use of the flow from their wastewater treatment plant for recycled water. The City has coordinated and continues to coordinate with the Pleasant Valley County Water District, PHWA, and United to discuss potential uses of recycled water in their service areas.

6.2.7.2 Wastewater Collection, Treatment, and Disposal

The City of Oxnard collects, treats and disposes of wastewater within its service area. Its service area includes most of the City as well as the City of Port Hueneme, Naval Bases Ventura County, and some unincorporated areas of Ventura County. The wastewater collection system includes 384 miles of gravity sewer pipelines, 4.7 miles of pressurized pipelines and 15 lift stations. Further information on the City's wastewater collection system can be found in the Public Works Integrated Master Plan (PWIMP) Wastewater Project Memorandum 3.1 Background Summary.

Table 6-5: DWR 6-2R Wastewater Collected within Service Area in 2025

6.2.7.3 Recycled Water System Description

The City's recycled water system consists of the AWPF which is designed to produce advanced treated recycled water with an ultimate design capacity of 12.5 million gallons per day (MGD) but is currently equipped to produce 6.25 MGD. Since operation, the AWPF has produced water for "unrestricted reuse," also referred to as "disinfected tertiary recycled water" or "Title 22 reclaimed water," as defined by the SWRCB Division of Drinking Water (DDW), and is to be used for non-potable supply such as landscape irrigation or industrial process water.

Recycled water is pumped from the AWPF into the distribution system by finished water pumps located at the AWPF. The existing recycled water distribution system consists of approximately 10 miles and delivers to the River Ridge Golf course and to various agricultural users. The AWPF facility operates to serve recycled water customers or for IPR. The recycled water distribution system currently does not include any system wide storage tanks; however, some recycled water users maintain their own on-site storage which reduces the peak demand on the AWPF.

For purposes of UWMP reporting, recycled water uses identified in Table 6-7 are limited to direct beneficial uses occurring within the City's UWMP service area. Recycled water deliveries to users located outside the UWMP service area are described separately in the narrative below and are not characterized as within-service-area uses. This distinction is important because some recycled water customers associated with the GREAT Program are located outside the City's UWMP service area.

As the City has received the Waste Discharge Requirement/Water Recycling Requirements (WDR/WRRs) to expand use of the advanced treated recycled water for IPR, the construction of the first ASR well project and demonstration required by the permit for IPR is planned to be completed by calendar year 2026 with State permitting to follow the construction phase for approximately 18-24 months. To utilize the recovered water from aquifer storage, this water must meet potable water standards as defined by DDW. The City's Capital Improvement Program (CIP) includes projects for the future improvements and expansion of the AWPF, addition of ASR well facilities, distribution pipelines, blending, and storage facilities to maximize the recycled water production capabilities as well as to support future demand conditions.

6.2.7.4 Potential, Current, and Projected Recycled Water Uses

In January of 2015, the City entered into a Full Advanced Treatment Recycled Water Management and Use Agreement with several entities: Pleasant Valley County Water District, Houweling Nurseries Oxnard, Southland Sod, Reiter Brothers, and Southern Pacific Farming, to provide recycled water for agricultural irrigation. These users are located in the Oxnard Plain, outside the City's service area. One of the stipulations in the agreement is that these users may receive recycled water at a lower priority than the City's customers. These agricultural customers grow several crops including sod, strawberries, celery, and other row crops.

Recycled water use is also planned for general groundwater recharge. The City expects to initially inject approximately 2.9 MGD of recycled water in 2027, and to ultimately increase recycled water injections for recharge up to 6.25 MGD (7,000 AFY).

Table 6-7: DWR 6-4R Recycled Water Direct Beneficial Uses Within Service Area, AFY

Name of Supplier Producing (Treating) the Recycled Water:	City of Oxnard
Name of Supplier Operating the Recycled Water Distribution System:	City of Oxnard
Supplemental Volume of Water Added in 2025:	
Source of 2025 Supplemental Water:	

USE TYPE	WATER TYPE	ADDITIONAL INFORMATION	2025	2030	2035	2040	2045	2050	POTENTIAL RECYCLED WATER VOLUME	POTENTIAL RECYCLED WATER NARRATIVE LOCATION

* The City currently delivers recycled water to agricultural customers *outside of the water service area*, so 0 AFY is shown for agricultural irrigation. The City intends to increase deliveries of recycled water for which it receives a Recycled Water Pumpback Allocation, which is shown here to reflect that recycled water was delivered but is quantified as potable supply in Table 6-12.

Table 6-8: DWR 6-5R 2020 Recycled Water Use Projection Compared to 2025 Actual

USE TYPE	2020 PROJECTION FOR 2025, AFY	2025 ACTUAL USE, AFY*
Agricultural Irrigation	3,875	0
Landscape Irrigation (excludes golf courses)		
Golf Course Irrigation		
Commercial Use		
Industrial Use	780	0
Geothermal and Other Energy Production		
Seawater Intrusion Barrier		
Recreational Impoundment		
Wetlands or Wildlife Habitat		
Groundwater Recharge (IPR)	1,345	0
Surface Water Augmentation (IPR)		
Direct Potable Reuse		
TOTAL:	**6,000**	**0**

* The City currently delivers recycled water to agricultural customers outside of the water service area, so 0 AFY is shown for agricultural irrigation; however 125 AFY was delivered to agricultural irrigation customers.

6.2.7.5 Actions to Exchange and Optimize Future Recycled Water Use

City Ordinance No. 2728, also called the City of Oxnard Recycled Water Use Ordinance, promotes water conservation and recycled water use to ensure the maximum public benefit from the use of the City's water supplies. Ordinance No. 2728 established that recycled water shall be used for suitable, non-potable purposes whenever and wherever recycled water is available at a reasonable cost and of an adequate quality. Both existing and new customers may be eligible to use recycled water if it is available in their area (City of Oxnard, n.d.). Due to Waste Discharge Requirement/Water Recycling Requirements (WDR/WRRs), to expand use of the advanced treated recycled water for IPR, corresponding updates to City Ordinance No. 2728 will be needed to reflect this important change.

Also, once implemented, the IPR program will provide another benefit as this source will use the existing potable distribution system, avoiding future construction costs for distribution and long-term maintenance for separate recycled water distribution pipelines.

Table 6-9: DWR 6-6R Methods to Expand Future Recycled Water

NAME OF ACTION	DESCRIPTION	PLANNED IMPLEMENTATION YEAR	EXPECTED INCREASE OF RECYCLED WATER USE, AFY
Indirect Potable Reuse	Aquifer Storage Recovery (ASR) Injection Well #1	2027	3,200
Indirect Potable Reuse	AWPF Improvements/Upgrade	2029	TBD
Indirect Potable Reuse	AWPF Expansion	2031	7,000
Indirect Potable Reuse	AWPF Recycled Water Storage Construction	TBD	TBD
Indirect Potable Reuse	ASR Injection Well Field	2031	TBD
-		**TOTAL:**	**TBD**

6.2.8 Desalinated Water Opportunities

The City currently operates Desalter #1 at its Water Campus. Desalter #1 has a capacity of 8,400 AFY with room for future expansion to 16,800 AFY. The Desalter is one of the major components of the City's GREAT program; other components include recycled water system (wastewater treatment by the AWPF), groundwater injection of recycled water, and brine collection from the AWPF and Desalter for treatment. The Desalter treats groundwater for Total Dissolved Solids (TDS) and nitrate reduction.

Desalter #1 is used to treat local groundwater supplies that require TDS and nitrate reduction before delivery into the potable distribution system. While this provides an important local supply benefit, desalinated groundwater is more costly to produce than groundwater from wells that can be chloraminated and delivered directly into the distribution system. Desalter operation requires treatment, membrane operation, chemical use, energy, brine handling, maintenance, and operator oversight. Desalter production must be balanced against immediate system demand, which limits the ability to operate the facility continuously and to its full annual design capacity.

In addition to brackish groundwater desalination projects, the City has evaluated pursuing seawater desalination projects. Seawater desalination was reviewed as an alternative to future AWPF expansions during the 2012 study for the GREAT program and found to be not cost effective. The City again analyzed seawater desalination in 2015 as a comparative cost to AWPF expansion. The intake infrastructure required to take in seawater into a treatment facility would be both significant and difficult to get permitted, making this alternative even less attractive. However, if in the future the expansion capacity of the AWPF is limited by the secondary effluent available and/or new technologies reduce costs, seawater desalination could be evaluated again as a viable future alternative.

Table 6-10: DWR 6-8DS Source Water Desalination

-						VOLUME OF WATER DESALINATED, AFY				
PLANT NAME OR WELL ID	PLANT CAPACITY, AFY	INTAKE TYPE	SOURCE WATER TYPE	INFLUENT TDS	BRINE DISCHARGE	2021	2022	2023	2024	2025
City Desalter	8,400	Vertical Well	Groundwater		Brine Line	3,622	4,135	1,665	1,137	841
-					**TOTAL:**	**3,622**	**4,135**	**1,665**	**1,137**	**841**

6.2.9 Water Exchanges and Transfers

Oxnard, Calleguas and PHWA entered into a Three-Party Agreement in 2002, which provides PHWA with Calleguas water through Oxnard's Calleguas pipeline.

As part of the development process, when private property is developed that has authorized groundwater allocations, it is transferred to the City as part of the City's water neutrality program as described in more detail in Section 9.2.7. Historically, the transferred allocations were 2 AFY per acre. This amount was reduced by 25% per Ordinance No. 8 and again by 20% though Emergency Ordinance E in 2014. FCGMA adopted an "Ordinance to Establish a New Pumping Allocation System for the Oxnard and Pleasant Valley Basins", effective on October 1, 2020, which replaced Emergency Ordinance E. This reset the initial extraction allocations based on the average annual extractions per well during the 2005-2014 base period. As a result, when irrigated acreage changes to Municipal & Industrial (M&I) use through a development process, the extraction allocation used to irrigate the acreage shall be transferred from the agricultural operator to the M&I operator on a one-to-one basis (Ordinance Article 9. Allocation Transfer, 9.4)

In January of 2015, the City entered into a Full Advanced Treatment Recycled Water Management and Use Agreement with several entities: Pleasant Valley County Water District, Houweling Nurseries Oxnard, Southland Sod, Reiter Brothers, and Southern Pacific Farming, to provide recycled water for agricultural irrigation. By the terms of this agreement, agricultural pumpers are required to transfer groundwater allocations to the City on a one-to-one basis for delivered recycled water. FCGMA Resolution 2023-02 allows the City to accrue these "Recycled Water Pumpback Allocations" which can be redeemed by the City when favorable Oxnard Forebay groundwater levels are present.

6.2.9.1 Emergency Interties

Oxnard has interconnections with other water purveyors: one with PHWA, one with the City of Port Hueneme, two with Channel Islands Beach Community Services District, and two with Naval Base Ventura County.

6.2.10 Future Water Projects

The City is working on projects to supplement supply through an ASR project under the GREAT program. The supply obtained from ASR is expected to become operational by 2027.

Table 6-11: DWR 6-7R Expected Future Water Supply Projects or Programs

NAME OF FUTURE PROJECTS OR PROGRAMS	JOINT PROJECT WITH OTHER SUPPLIERS	AGENCY NAME	DESCRIPTION	PLANNED IMPLEMENTATION YEAR	PLANNED FOR USE IN YEAR TYPE	EXPECTED INCREASE IN WATER SUPPLY TO SUPPLIER, AFY

	TOTAL:	**30,507**	**31,049**	**29,184**	**29,210**	**29,225**

6.3 Energy Intensity

The City has previously implemented energy efficiency initiatives, including an Energy Action Plan, to support reductions in water system energy use.

In 2025, the City consumed 2,864,350 kWh of electricity and produced 22,977 AF of potable water. This averages to approximately 125 kWh per AF as shown in Table 6-13.

Table 6-13: DWR O-1B: Recommended Energy Intensity Total Utility Approach

Water Delivery Product	Retail Potable Deliveries
Start Date for Reporting Period	January 1, 2025
End Date for Reporting Period	December 31, 2025

	URBAN WATER SUPPLIER OPERATIONAL CONTROL		
	SUM OF ALL WATER MANAGEMENT PROCESSES	NON-CONSEQUENTIAL HYDROPOWER	
	TOTAL UTILITY	HYDROPOWER	NET UTILITY
Volume of Water Entering Process (AF)	22,977		22,977
Energy Consumed (kWh)	2,864,350		2,864,350
Energy Intensity (kWh/AF)	125		125

DATA QUALITY	Metered Data

Total consumption of city operations and total potable water delivered is provided for the total utility. The energy consumed is for electricity use of the water system and includes lights, heating, cooling of any administrative water service facilities, etc.

7 Water Service Reliability and Drought Risk Assessment

This section describes water service reliability through 2050. As required by the UWMP Act, the assessment must compare total projected water supply and demands over the next 20 years in five-year increments under normal, single dry water years, and multiple dry water years. This section also includes the drought risk assessment (DRA), which provides a snapshot of the anticipated surplus or deficit if a drought were to occur in the next five years.

IN THIS SECTION

- Water Service Reliability Assessment
- Drought Risk Assessment

7.1 Introduction

Water service reliability is determined based on the security of water supply and water infrastructure security. The supply reliability assessment discusses factors (i.e., climatic, environmental, water quality and legal) that could potentially limit the expected quantity of water available from the City's current and projected sources of supply through 2050. Multiple drought scenarios are considered, and the quantitative impacts of the aforementioned factors on water supply and demand are discussed, as well as possible methods for addressing these issues.

Evaluating water service reliability is critical for water management as it can help identify potential problems before these happen. Water managers can then take proactive steps to mitigate shortages by encouraging water use efficiency, securing new water supplies and/or investing in infrastructure.

7.2 Water Service Reliability Assessment

The City's 2025 UWMP water service reliability assessment and DRA results indicate that no water shortages are anticipated within the next 25-years under normal, single dry water years, and multiple dry water years.

7.2.1 Service Reliability - Constraints on Water Sources

As described in Chapter 6, the City has various water supply sources available (local groundwater, purchased groundwater, imported water, and recycled water) to meet demands during normal, single-dry, and multiple-dry years.

- Groundwater: As described in Section 6.2.2, the local groundwater basin is subject to the jurisdiction of the FCGMA. As the region's Groundwater Sustainability Agency, FCGMA adopted a GSP for the Oxnard Subbasin in December 2019, in accordance with SGMA. The FCGMA Board approved the Oxnard Basin First Periodic Evaluation of the GSP in December 2024, which was submitted to DWR in January 2025. The groundwater allocation to the City via governances from the FCGMA may change and/or be impacted by active groundwater adjudication or requirements pursuant to SGMA .

  The GSP and subsequent updates address the long-term sustainability of the basin for municipal and agricultural pumpers and establish sustainable yield scenarios, which estimate the amount of pumping that will prevent undesirable results to the basin. By 2040, the goal is to bring the basin to a sustainable level and to achieve this, the GSP and First Periodic Evaluation identify multiple sustainable yield scenarios, which could result in a wide range of potential future supply availability for the City. For UWMP planning purposes, it is assumed groundwater availability will decline in proportion to basin-wide sustainable yield under the First Periodic Evaluation "Projects" scenario, resulting in an approximate 28% reduction from baseline conditions to 9,540 AFY by

2040. While future conditions may result in higher, lower, or no reductions to groundwater supply, the 28% estimate represents a mid-range value within the spectrum of potential sustainable yield scenarios that is aligned with the City's planned supply. See Section 6.2.2 for more details.

Another constraint is that high levels of TDS in the local groundwater requires blending with other sources to maintain TDS at desired levels. Additional reliability factors are discussed in Section 7.2.3.

- **Purchased Groundwater:** As described in Section 6.2.2, the groundwater extracted by United and delivered to the City is also subject to FCGMA and uncertainty about future groundwater supply conditions. This source also requires blending for desired levels of TDS. It is important to note that United's Draft 2025 UWMP assumes "United's future supply estimates for the OH System are based on the scenarios that include EBB, which will not require allocation reductions" (United Water Conservation District, April 2026). While the City recognizes that this could be a potential future groundwater condition, this UWMP assumes a more conservative supply planning approach for reliability, resiliency, and cost efficiency planning purposes.
- **Imported Water:** Imported surface water from Calleguas is potentially subject to cutbacks for climatic, legal, environmental and water quality reasons. Potential reductions in allocations are discussed in Section 7.2.3.
- **Recycled Water:** The City is expected to establish recycled water as part of their water supply portfolio within the next few years. Since the recycled water source is wastewater flows from indoor use, this supply is generally not impacted by climatic factors. For this reason, limited rainfall does not influence flows of the wastewater system and therefore does not affect the availability of recycled water. Recycled water is commonly viewed as a drought-proof supply and is assumed to be 100 percent reliable.

Factors impacting the reliability of the City's supply sources are shown in Table 7-1.

Table 7-1: Factors Resulting in Inconsistency of Supply

WATER SUPPLY SOURCE	CLIMATIC	LEGAL	ENVIRONMENTAL	WATER QUALITY
City Produced Groundwater	X	X	X	X
United Produced Groundwater	X	X	X	X
Calleguas Imported Water	X	X	X	X
Recycled Water		X		X

While the City has historically received enough supply to meet demand, the supply portfolio is dynamic and historical conditions may not accurately represent scenarios that may happen in

the future. Therefore, supply and demand were estimated during dry years considering the following priorities and constraints.

1. As described earlier in this section, for UWMP planning purposes, it is assumed groundwater availability for the City and groundwater from United will decline to 9,540 AFY by 2040. While future conditions may result in higher, lower, or no reductions to groundwater supply, this UWMP assumes a more conservative supply planning approach for reliability, resiliency, and cost efficiency planning purposes. See Section 6.2.2 for more details.
2. As described in Section 6.2.2, this UWMP does not assume that any additional drought-year reduction would automatically apply on top of long-term basin reductions unless and until such reductions are formally established.
3. The City assumes that groundwater storage allocations can be utilized in the future.
4. As described in Section 6.2.1, Calleguas water is used as minimally as possible to avoid high costs, but to meet operational needs and improve water quality blending for TDS targets, there is a minimum amount of water that the City must use from Calleguas. Imported water reliability in future dry-year conditions may be influenced by Metropolitan's and Calleguas' supply conditions, SWP and Colorado River conditions, infrastructure constraints, regulatory actions, water quality needs, and other operational factors. Calleguas' 2025 UWMP indicates it can provide 100% of demand in normal years, single dry years, and for four consecutive dry years. It will be able to provide 85% of unconstrained demand in a fifth consecutive dry year (Water Systems Consulting, Inc., May 2026).
5. Lastly, it is assumed that recycled water will become a larger part of the City's portfolio once fully implemented. This will provide flexibility on reducing demand from other sources of water like Calleguas and/or United water. Since recycled water is considered a drought-proof supply, it is not anticipated to be reduced in dry years and is therefore not included in Table 7-2.

Table 7-2: Consecutive Dry Year Percent Reductions by Source.

SUPPLY	CONSECUTIVE DRY YEAR 1ST YEAR REDUCTION	CONSECUTIVE DRY YEAR 2ND YEAR REDUCTION	CONSECUTIVE DRY YEAR 3RD YEAR REDUCTION	CONSECUTIVE DRY YEAR 4TH YEAR REDUCTION	CONSECUTIVE DRY YEAR 5TH YEAR REDUCTION
City Groundwater	0%	0%	0%	0%	0%
United Groundwater	0%	0%	0%	0%	0%
Calleguas Imported	0%	0%	0%	0%	15%

7.2.1.1 Climatic Factors

Consistent future use of the Oxnard Basin may be affected by climate change. Climate change forecasts indicate a decrease in the number of storms but an increase in their intensity, potentially leading to higher runoff and less recharge of rainfall into groundwater basins. Additionally, projected rises in sea level may increase the risk and extent of seawater intrusion. Climate change is considered within the GSP for the Oxnard Basin and in the Calleguas 2025 UWMP, which are both reflected in supply projections in this UWMP.

7.2.1.2 Environmental Factors

As a coastal community, the City and other local agencies continue to monitor the groundwater basin for undesirable results, especially seawater intrusion. This factor is the one most likely to seriously impact the reliability of the City's current groundwater supply. Environmental factors are considered within the GSP for the Oxnard Basin and in the Calleguas 2025 UWMP, which are both reflected in supply projections in this UWMP.

7.2.1.3 Water Quality Factors

Consistent future use of the Oxnard Basin may be affected by TDS. Currently, the City uses imported water and when necessary, the City desalter to maintain TDS at adequate levels. Water quality factors are reflected in supply projections in this UWMP.

7.2.1.4 Legal Factors

The City is subject to groundwater regulation by FCGMA. Any limitations to allocations or emergency ordinances implemented by FCGMA will affect the City's ability to extract groundwater. Calleguas supplies are subject to multiple legal factors. Legal factors are considered within the GSP for the Oxnard Basin and in the Calleguas 2025 UWMP, which are both reflected in supply projections in this UWMP.

7.2.1.5 Response to Factors

In response to the climatic, environmental, water quality, and legal factors mentioned above that could potentially impact the consistency of the City's supply in the future, the City is advocating continued conservation, active involvement in FCGMA, and completing the process to add recycled water as a supplemental supply.

7.2.2 Service Reliability – Year Type Characterization

In accordance with CWC Section 10635(a), every urban water supplier must provide their expected water service reliability for a normal year, single dry year, and five consecutive dry years for 2030, 2035, 2040, 2045, and optionally 2050.

7.2.2.1 Types of Years

DWR defines these years as:

- **Normal Year:** This condition represents a single year or an averaged range of years that most closely represents the average water supply available. An average was used for this analysis.
- **Single Dry Year:** The single dry year is recommended to be the year that represents the lowest water supply available.
- **Five-Consecutive Year Drought:** The driest five-year historical sequence for the supplier, which may be the lowest average water supply available for five years in a row.

7.2.2.2 Sources for Water Data

As described in Chapter 6, the City's water supply portfolio is dynamically managed depending on a variety of factors for each source, including but not limited to groundwater allocations, wholesale allocations, agreements with neighboring agencies, production capacity, and water quality standards. Table 6-12, in the previous chapter, presents the most likely "normal" supply conditions anticipated through 2050. Variables that existed in historical years for each source will likely be different in future normal and drought years and the supply portfolio will be managed to meet demand. While supply constraints vary by source depending on various factors, such as hydrology, rainfall, groundwater conditions, wholesale supply allocation reduction, statewide mandated water conservation, etc., the City can adaptively manage its water supply portfolio to meet demands. Demands tend to fluctuate in response to local rainfall conditions. Therefore, rainfall is used to determine normal and dry year demand scenarios. Historical rainfall from 2010-2025 was used to determine historical normal and dry years demand conditions that need to be met with a dynamic supply portfolio considering supply constraints at the given time. The normal, single dry, and five-consecutive year drought basis years are shown in Table 7-3. The year with the least rainfall from 2010-2025 was determined to be the single dry year, 2013, and the five-year consecutive drought corresponded to the period of 2013 - 2017. The normal year, 2011, was selected as the year with the second closest to average rainfall from 2010-2025. The year with the closest to average rainfall was 2024; however this was not selected for the purposes of this analysis because it is more appropriate to use years that are closer to each other within a normal period followed by a drought period.

The percent change for each dry year compared to a normal year corresponds to anticipated demand pattern changes during a drought cycle. In the first year, or a single dry year, demands are expected to increase, particularly outdoor demands. It is anticipated that demands will reduce if a drought continues as a result of conservation measures implementation and usage behavior changes due to social awareness of the drought.

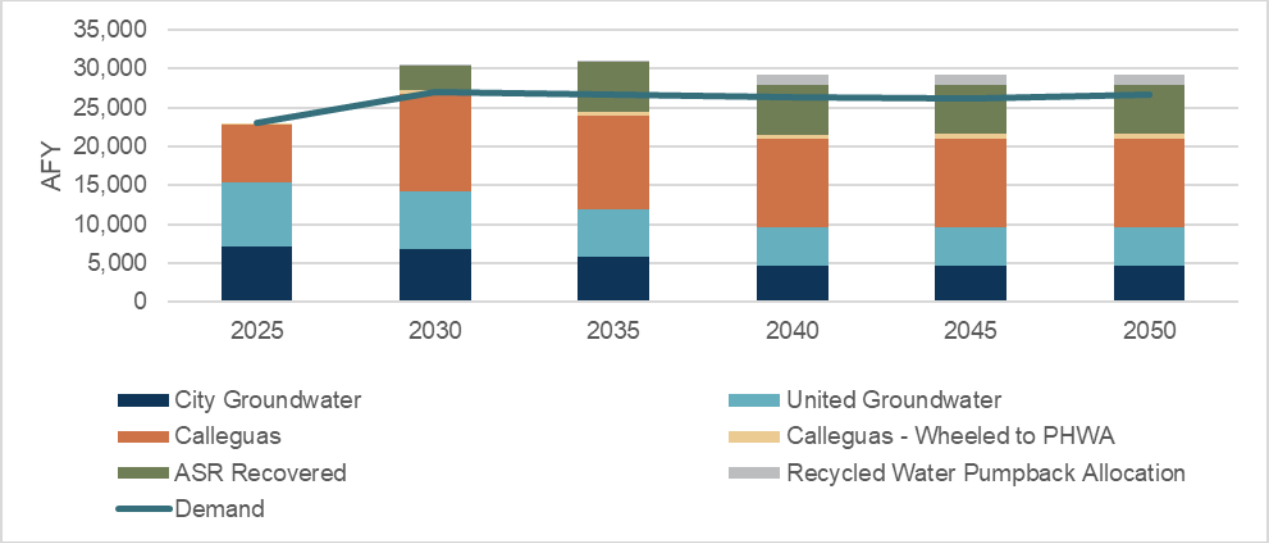
Table 7-3: DWR 7-1R Basis for Water Year Data (Reliability Assessment)

YEAR TYPE	BASE YEAR	HISTORIC PRODUCTION	
		VOLUME AVAILABLE, AFY	PERCENT OF AVERAGE
Average Year	2011	28,189	100
Single-Dry Year	2013	30,454	108
Consecutive Dry Years 1st Year	2013	30,454	108
Consecutive Dry Years 2nd Year	2014	28,323	100
Consecutive Dry Years 3rd Year	2015	25,624	91
Consecutive Dry Years 4th Year	2016	25,638	91
Consecutive Dry Years 5th Year	2017	26,487	94

The City will meet 100% of demands that are assumed to fluctuate in dry years with adaptive management of its supply portfolio or WSCP actions.

7.2.3 Water Service Reliability – Supply and Demand Comparison

Results of the water supply and demand analysis for normal, single dry, and five-year consecutive drought are shown in the following sections. The City expects to meet demands under all water year scenarios and continue to promote conservation to ensure reliability throughout the future.



7.2.3.1 Water Service Reliability – Normal Year

As described previously, the City's supply portfolio will be managed to meet demand as shown Table 7-4 and Figure 7-1.

Table 7-4: DWR 7-2R Normal Year Potable Supply and Demand Comparison

	2030	2035	2040	2045	2050
Supply Totals (from Table 6-9R), AFY	30,507	31,049	29,184	29,210	29,403
Demand Totals (From Table 4-2R), AFY	27,516	27,253	26,831	26,801	27,217
DIFFERENCE:	**2,991**	**3,796**	**2,354**	**2,409**	**2,187**

Figure 7-1. Normal Year Potable Supply and Demand Comparison

7.2.3.2 Water Service Reliability – Single-Dry Year

Demand responses during a recent single dry year in 2013 resulted in an 8% increase from an average year demand in 2011. Therefore, the projected single dry year water demands through 2050 are assumed to increase by 8% under similar hydrologic conditions through 2050 as shown in Table 7-5 and are able to be met with the available supply.

Table 7-5. DWR 7-3R Single Dry Year Potable Water Supply and Demand Comparison

	2030	2035	2040	2045	2050
Supply Totals, AFY	30,507	31,049	29,184	29,210	29,403
Demand Totals, AFY	29,727	29,442	28,986	28,954	29,403
DIFFERENCE:	**780**	**1,606**	**198**	**256**	**0**

Note: Single dry year demands are expected to change based on actual demands in a single dry year in 2013 compared to an average year of 2011 (108%) per Table 7-3.

7.2.3.3 Water Service Reliability – Five Consecutive Dry Years

Demand responses during the 2013-2017 drought period were evaluated to inform potential changes in water use under extended dry conditions. During that period, demand initially increased in the first year of drought, followed by reductions in subsequent years as conservation measures and behavioral changes took effect. These historical trends were used as a reference in developing baseline multi-dry year demand projections.

However, under extended dry conditions, the City would implement demand reduction measures in accordance with its Water Shortage Contingency Plan (WSCP) including drought

rate structures and mandatory water use restrictions as approved by the City Council. These actions are expected to reduce water demands during prolonged drought conditions.

The demand projections presented are conservative in that they do not fully reflect the additional demand reductions that would occur under implemented WSCP actions. As a result, actual water demands during extended dry periods may be lower than those shown.

As shown in Table 7-6, available water supplies are sufficient to meet projected demands during multiple dry year conditions.

Table 7-6: DWR 7-4R Multiple Dry Years Supply and Demand Comparison

		2030	2035	2040	2045	2050
First Year	Supply Totals, AFY	30,507	31,049	29,184	29,210	29,403
	Demand Totals, AFY	29,727	29,442	28,986	28,954	29,403
	DIFFERENCE:	**780**	**1,606**	**198**	**256**	**0**
Second Year	Supply Totals, AFY	30,507	31,049	29,184	29,210	29,403
	Demand Totals, AFY	27,594	27,298	26,953	27,012	27,407
	DIFFERENCE:	**2,913**	**3,751**	**2,232**	**2,198**	**1,997**
Third Year	Supply Totals, AFY	30,507	31,049	29,184	29,210	29,403
	Demand Totals, AFY	24,916	24,619	24,378	24,513	24,849
	DIFFERENCE:	**5,591**	**6,429**	**4,806**	**4,697**	**4,554**
Fourth Year	Supply Totals, AFY	30,507	31,049	29,184	29,210	29,403
	Demand Totals, AFY	24,882	24,556	24,386	24,602	24,917
	DIFFERENCE:	**5,625**	**6,493**	**4,798**	**4,608**	**4,486**
Fifth Year	Supply Totals, AFY	28,607	29,244	27,470	27,496	27,511
	Demand Totals, AFY	25,657	25,290	25,189	25,495	25,799
	DIFFERENCE:	**2,950**	**3,953**	**2,281**	**2,000**	**1,711**

Note: Five consecutive dry years demands are expected to change based on actual demands in five consecutive dry years of 2013–2017 compared to an average year of 2011 per Table 7-3 as follows: Year 1 (108%), Year 2 (100%), Year 3 (91%), Year 4 (91%), and Year 5 (94%).

7.2.4 Description of Management Tools and Options

The City relies on local groundwater to meet demands and offset costs for imported water. As a result, the City is committed to ensuring that the basin meets sustainability goals and is

protected against seawater intrusion and other threats. The City is in the process of finalizing a stable recycled water supply for indirect potable reuse and the potential for groundwater recharge. The City also coordinates efforts with FCGMA.

7.3 Drought Risk Assessment

CWC Section 10635 (b) requires a DRA. The DRA provides a quick snapshot of the anticipated surplus or deficit if a five-consecutive year drought were to occur in the next five years. The DRA can be modified or updated outside of the UWMP five-year plan cycle, so a description of the data, methodology, and basis for shortage conditions must be included in this 2025 UWMP. The DRA evaluates each water supply's reliability and compares available water supplies and projected demands during a five-consecutive dry years scenario. This short-term analysis can help water suppliers foresee undesired risks, such as upcoming shortages, and provide time to evaluate and implement the necessary response actions needed to mitigate shortages in a less impactful manner to the community and environment.

7.3.1 Data, Methods, and Basis for Water Shortage Condition

The DRA builds on the water service reliability analysis from Section 7.2, which incorporated assessment of historical consumption data by customer class, populated from billing records, and historical supply data by source from production reports. Based on this data, historical demand has never exceeded available supply. For this DRA analysis, normal year demand conditions and five consecutive year drought supply conditions were considered for 2026-2030.

7.3.2 DRA Individual Water Source Reliability

As described previously, the City does not anticipate any supply shortages within the next five years as shown in Table 7-7.

Table 7-7: DWR 7-5 Five-Year Drought Risk Assessment

2026	Gross Water Use	25,578
	Total Supplies	30,507
	Surplus/Shortfall without WSCP Action	4,929
2027	Gross Water Use	24,630
	Total Supplies	30,507
	Surplus/Shortfall without WSCP Action	5,877
2028	Gross Water Use	23,043
	Total Supplies	30,507
	Surplus/Shortfall without WSCP Action	7,464
2029	Gross Water Use	23,817
	Total Supplies	30,507
	Surplus/Shortfall without WSCP Action	6,690
2030	Gross Water Use	25,393
	Total Supplies	28,607
	Surplus/Shortfall without WSCP Action	3,214

Note: Total water use is calculated by applying five consecutive dry year factors from (which are calculated by comparing actual potable use from 2013-2017 to 2011, as shown in Table 7-3) to a linear interpolation between actual 2025 potable use and projected 2030 potable use.

8 Water Shortage Contingency Plan

The Water Shortage Contingency Plan (WSCP) is a detailed plan for how the City intends to act in the case of an actual water shortage condition. This allows for management of a shortage with predictability and accountability. This section provides an overview of the contents of the City's WSCP. The standalone WSCP is included in Appendix A.

IN THIS SECTION

- Overview of WSCP Components

8.1 Introduction

The CWC Section 10632 requires that every urban water supplier shall prepare and adopt a standalone WSCP as part of its UWMP.

The City's WSCP is included as Appendix A and will be separately submitted to DWR. The WSCP is developed independently of the City's 2025 UWMP and can be amended, as needed, without amending the UWMP.

The WSCP is a strategic plan that the City uses to prepare for and respond to foreseeable and unforeseeable water shortages. A water shortage occurs when the water supply available is insufficient to meet the normally expected customer water use at a given point in time. A shortage may occur due to a number of reasons, such as water supply quality changes, climate change, drought, regional power outage, and catastrophic events (e.g., earthquake). Additionally, the State may declare a statewide drought emergency and mandate that water suppliers reduce demands. The WSCP serves as the operating manual that the City will use to prevent catastrophic service disruptions through proactive, rather than reactive, mitigation of water shortages.

The WSCP provides a process for an annual water supply and demand assessment and structured steps designed to respond to actual conditions. This level of detailed planning and preparation provides accountability and predictability and will help City maintain reliable supplies and reduce the impacts of any supply shortages and/or interruptions.

The WSCP must be updated based on new requirements every five years and will be adopted as a current update for submission to DWR.

8.2 Overview of WSCP Components

The Water Code establishes several prescriptive elements that must be included in a retail water supplier's WSCP. Each element and its location within the WSCP is described below.

Water Supply Reliability Analysis: Summarizes City's water supply analysis and reliability and identifies any key issues that may trigger a shortage condition.

Annual Water Supply and Demand Assessment Procedures: Describes the key data inputs, evaluation criteria, and methodology for assessing the system's reliability for the coming year and the steps to formally declare any water shortage levels and response actions.

Shortage Stages: Establishes water shortage levels to clearly identify and prepare for shortages.

Shortage Response Actions: Describes the response actions that may be implemented or considered for each stage to reduce gaps between supply and demand.

Communication Protocols: Describes communication protocols under each stage to ensure customers, the public, and government agencies are informed of shortage conditions and requirements.

Compliance and Enforcement: Defines compliance and enforcement actions available to administer demand reductions.

Legal Authorities: Lists the legal documents that grant City the authority to declare a water shortage and implement and enforce response actions.

Financial Consequences of WSCP Activation: Describes the anticipated financial impact of implementing water shortage stages and identifies mitigation strategies to offset financial burdens.

Monitoring and Reporting: Summarizes the monitoring and reporting techniques to evaluate the effectiveness of shortage response actions and overall WSCP implementation. Results are used to determine if additional shortage response actions should be activated or if efforts are successful and response actions should be reduced.

WSCP Refinement Procedures: Describes the factors that may trigger updates to the WSCP and outlines how to complete an update.

Special Water Feature Distinctions: Identifies restrictions and applicable exemptions for decorative water features in accordance with the City's Water Shortage Contingency Plan and water waste ordinances..

Plan Adoption, Submittal, and Availability: Describes the process for the WSCP adoption, submittal, and availability after each revision.

The WSCP was prepared in conjunction with City's 2025 UWMP and is a standalone document that can be modified as needed. The document is compliant with the CWC Section 10632 and incorporates guidance from the DWR UWMP Guidebook (California Department of Water Resources, 2026).

9 Demand Management Measures

This section describes City's efforts to promote water use efficiency, reduce demand on the water supply, and prepare for future requirements through implementation of demand management measures (DMMs).

IN THIS SECTION

- Existing Demand Management
- Reporting Implementation
- Water Use Objectives

9.1 Introduction

In 2005, the City became a signatory to the California Urban Water Conservation Council's (CUWCC) memorandum of understanding, establishing a firm commitment to the implementation of DMMs. The CUWCC was a consensus-based partnership of agencies and organizations concerned with water supply and conservation of natural resources in California.

By becoming a member, the City demonstrated its commitment to implement a specific set of locally cost-effective conservation practices in its service area. Over the following years, CUWCC members, including the City, submitted BMP reports detailing progress.

In March 2018, the CUWCC was replaced by the California Water Efficiency Partnership (CalWEP) and the City joined the organization shortly thereafter. CalWEP's mission is to maximize urban water efficiency and conservation throughout California by supporting and integrating innovative technologies and practices; encouraging effective public policies; advancing research, training, and public education; and building collaborative approaches and partnerships. As an active CalWEP member, the City will continue to collaborate to achieve greater water use efficiency for our local community.

The CWC requires a narrative description that addresses the nature and extent of each DMM implemented over the past five years and DMMs that the supplier plans to implement to achieve its water use targets pursuant to CWC Section 10608.20. The required DMM narratives are provided in the following subsections.

Table 9 1. Demand Management Measures

Measure	
1	Water waste prevention ordinances
2	Metering
3	Conservation pricing
4	Public education and outreach
5	Programs to assess and manage distribution system real loss
6	Water conservation program coordination and staffing
7	Other DMMs

9.2 Existing Demand Management Measures

Consistent with the requirements of CWC, this section describes the DMMs from Table 9-1 that have been implemented in the past five years and will continue to be implemented into the future in order to continue meeting the City's water use efficiency goals and CWOL Regulation requirements.

9.2.1 Water Waste Prevention Ordinances

As detailed in Section 8, Oxnard restricts water waste through its municipal code. Oxnard City Code Chapter 22, Section 22-136, prohibits wasteful or unreasonable water use and establishes a range of specific water-saving requirements (such as limits on outdoor irrigation hours, prohibition of water runoff, and restrictions on use of potable water for washing surfaces) that apply at all times. Ordinances 2729, 2810, and 2826 are among those that have amended these provisions in the code. Section 22-154 further authorizes the City Council to designate water shortage conditions in stages (1 through 4) and to implement corresponding mandatory conservation measures when a water shortage is declared.

The City's water use restrictions outline multi-stage conservation requirements tied to drought severity, with Stage 1 involving limits such as outdoor irrigation schedules and Stage 2 and higher stages imposing progressively stricter measures. Declaration of a water shortage stage carries specific conservation measures and possible enforcement actions, including surcharges for water use in excess of designated allotments.

In April 2023, the City declared a Stage 1 water shortage level. The Stage 1 measures listed below are in addition to the permanent measures in Chapter 22 Sections 22-136 of the City Code. Water waste prevention measures mainly include outdoor irrigation measures as listed below (City of Oxnard, 2023):

a) Watering of lawns, functional turf, trees, shrubs, vegetation, landscape and other outside irrigation is limited to three days per week.
b) The following watering schedule is established for all customers:
    - Monday, Wednesday, and Saturday ONLY
c) Watering or irrigating of functional turf, landscape or other vegetated area with potable water using a landscape irrigation system or a watering device is limited to no more than 10 minutes per day per station as permitted during the three days per week watering allowance.
d) Exceptions to allow for irrigation outside of the designated periods include (1) the hand watering of trees, food plants, or other perennials with use of a container (e.g. bucket or watering can) or a hose fitted with a shut-off nozzle and (2) the use of drip irrigation or other high-efficiency irrigation systems to apply water at a weekly volume consistent with the three-day watering restriction imposed on less efficient irrigation systems.
e) Potable water for irrigation of non-functional turf at commercial, industrial and institutional properties, including HOAs, is prohibited.

f) The application of potable water to landscapes during and within 48 hours after measurable rainfall is prohibited.
g) The use of potable water in a fountain or other decorative water features is prohibited, except where the water is part of a recirculating system.
h) All vegetation within Wildland-Urban Interface and Defensible Space will be maintained as required under Public Resource Code 4291.

9.2.2 Metering

All of Oxnard's customers are metered and billed volumetrically on a monthly basis using an Automatic Meter Reading (AMR) system. Commercial, industrial, and institutional accounts and parks are encouraged to have dedicated irrigation meters. In addition, Oxnard has identified Advanced Metering Infrastructure (AMI) technologies as a conservation priority. In 2025, the City successfully completed the transition from Automated Meter Reading (AMR) to Advanced Metering Infrastructure (AMI) system-wide. This technology now plays a key role in supporting water conservation efforts by improving leak detection, reducing water loss, and providing enhanced monitoring by customers for their water usage through more timely and accurate data. Customers have the opportunity to download the EyeOnWater app to see their water usage activity in real time.

9.2.3 Conservation Pricing

The City's pricing structure is based on the March 2023 cost of service and includes both a fixed monthly service charge and a per-unit charge. The monthly fixed charge is based on meter size. The per-unit charge includes the cost of water supply, treatment and distribution. The March 2023 Cost of Service study provides information about the tiered rate structure as well as the fixed and variable rates. It also outlines allowable drought rates. The Cost of Service Study is available at https://www.oxnard.gov/public-works/water/water-rates-fees for reference. The rate structure reflects the City's various sources of supply, coupled with specific consumption patterns that directly impact the City's costs. The Water Cost of Service Study in March 2023, considered operating costs, capital needs, supply costs, and other factors influencing service costs.

9.2.4 Public Education and Outreach

Public outreach is a critical component of Oxnard's conservation efforts. Water conservation is promoted through a variety of informational programs and public events. Oxnard offers conservation educational flyers, activity booklets, public outreach displays, oral presentations, and workshops to inform the public of conservation efforts at a variety of different local community events throughout the year. Oxnard raises awareness about water conservation through paid advertising, press releases, newspaper ads, and social media, and provides its customers with a water usage comparison on their water bills. Additionally, Oxnard's web page (Oxnard.gov/Water) provides information related to programs, rebates, water-saving tips, and announcements about upcoming events. Oxnard also benefits from outreach programs provided through the Metropolitan Water District (MWD) and Calleguas Municipal Water District (CMWD).

9.2.5 Programs to Assess and Manage Distribution System Real Losses

The City repairs all reported leaks and locates and repairs unreported leaks. Additionally, the City's Public Works Integrated Master Planning identifies aging pipelines prone to leakage to support a more robust pipeline replacement program, thereby reducing water loss from aging infrastructure.

The City recognizes the need to optimize local water resources, minimize the need for imported water, and discourage wasteful practices. The City conducts water audits, leak detection, and repairs on an ongoing basis. Through metering, the City closely monitors water production and consumption and investigates any unaccounted-for water to identify water loss. The City's AMI metering systems identify leaks on the customers' side of the meter. If a customer has uncharacteristically high (greater than 20% of the past month) monthly water use, the City contacts the customer for a leak evaluation. An example of optimizing water resources is the analysis performed by Waterwise Consulting, Inc. on the water usage at twenty-two City managed parks throughout the City. The program was paid for by the City of Oxnard Water Division with a grant from Metropolitan Irrigation District and resulted in saving 9,845,176 gallons of water for FY 2023/24 at a cost savings of $58,835.

The City's field staff regularly watches for water waste and leaks, then notifies and works with customers to address the situation. Incidents of water waste are investigated, and recommendations for correction are provided. Water sources are regulated and can be disconnected in cases of excessive leakage and/or facility failure.

Since 2016, the City has annually completed an AWWA's M36 Water Loss analysis, which consists of a component analysis of leaks into "revenue" and "non-revenue" categories, among others, and an economic analysis of recoverable loss. The most recent water loss audit was completed and verified for CY 2025.

9.2.6 Water Conservation Program Coordination and Staffing Support

Since 2021, the Water Conservation Program has experienced several staffing changes, including retirements and team members moving on to other opportunities. As of 2023, the program is composed of a full-time Water Conservation Outreach Supervisor and a Water Conservation Outreach Technician. Despite the reduction in staffing, the program continues to advance conservation efforts and remains supported through regional partnerships with the Calleguas Municipal Water District and the Metropolitan Water District's conservation programs and staff to encourage and promote regional water efficiency.

9.2.7 Other Demand Management Measures

Residential Plumbing Retrofit: The City provides free water conservation devices to residents at water conservation events and upon request. The free water conservation devices include showerheads, kitchen faucet aerators, bathroom faucet aerators, toilet flappers, and hose nozzles.

School Education Programs: The Water Conservation Team provides a variety of educational programs and outreach opportunities throughout Oxnard's service area. Staff conduct educational presentations at local schools to teach students about water conservation, water sources, and the importance of protecting our water supply. The team also participates in multiple career fairs each year to raise awareness about careers in the water industry and promote workforce development. In addition, several student groups are welcomed to the Water Division annually for guided tours, offering a firsthand look at water operations and career pathways. The City also partners with a consultant who delivers interactive school assemblies focused on water education. Furthermore, the Water Division hosts the annual Water Wise Student Art Contest, which engages youth in promoting water conservation through creative expression. The winning artworks and artists are recognized in May during Water Awareness Month.

Rebates: City customers have access to various types of rebates, such as for turf replacement and water saving devices offered by Metropolitan in collaboration with Calleguas. These rebates change from year to year but when available, customers are notified by way of bill inserts and other media channels and current information is always posted on the City's website.

Water Neutrality Policy: the City evaluates proposed developments to determine whether the proposed development is within the supply and demand forecasts contained in the City's most recent UWMP or General Plan EIR (City of Oxnard, May 2017). Should a proposed development require additional water than previously planned for in the City's UWMP or General Plan EIR (City of Oxnard, May 2017), then the proposed development may be required to offset its water demand with a supplemental water supply. Possible supplemental supply options may include existing FCGMA groundwater allocations that are transferred to the City, increased efficiency and water conservation or recycled water retrofit projects, additional water supplies, or a combination of efforts (City of Oxnard, May 2017). More information can be found in the Oxnard CEQA Guidelines at https://www.oxnard.gov/wp-content/uploads/CEQA-Guidelines-Color.pdf.

9.3 Reporting Implementation

9.3.1 Implementation over the Past Five Years

The following sections describe the DMMs implemented by the City for the 2021 through 2025 calendar years.

9.3.1.1 Public Education

Since 2021, the City has held its Student Water Wise art contest for students participating in the Scholars After School Program. The award-winning artworks were displayed at the Oxnard Public Library during the month of May, for Water Awareness month, and the top-winning art pieces were posted on the City's recycling trucks. The students participated in a small recognition ceremony at their respective schools, and the number one winners got to have the recycling truck visit their school to showcase their artwork. In addition, Oxnard facilitated a

school assembly program in 2021-2025 with the "H2O, Where Do You Go?" show, which meets the state education framework requirement and next generation science standards (NGSS). The presentations in 2021 were transitioned into a virtual learning format due to COVID-19 restrictions. Table 9-1 summarizes Oxnard's water conservation education efforts from 2021 to 2025.

Table 9-1: Public Water Conservation Education 2021 - 2025

	2021	2022	2023	2024	2025	TOTAL
K-6 School Live Assemblies and Virtual Presentations	28	13	21	13	10	**57**
High School Visits/Secondary Education	0	2	4	4	2	**12**
TOTAL ESTIMATED STUDENT AUDIENCE						**14,250**

9.3.1.2 Public Outreach

The City has undertaken hundreds of public outreach measures between 2021 and 2025. Outreach messages have included subjects related to water conservation, drought, water careers, water wise landscaping, the impact of water conservation on water quality, and available rebate and retrofit offers. Total outreach activities from 2021 to 2025 are listed in Table 9-2.

Table 9-2. Public Outreach 2021-2025

OUTREACH METHOD	2021	2022	2023	2024	2025	TOTAL
Printed Messages	6	3	5	2	3	**19**
Presentations	4	5	17	6	16	**48**
Booths at Local Fairs/Events	7	4	12	21	15	**59**
Website Ads and Updates	6	6	4	6	4	**26**
Monthly Water Use Reports	12	12	12	12	12	**60**
Fix-A-Leak Workshops	2	2	4	2	2	**12**
News Releases	3	3	2	0	0	**8**
Newspaper Contacts/ads	4	4	2	1	2	**13**
Television Contacts/DMV ads	0	12	12	12	12	**48**
Radio Ads and Interviews	2	2	2	0	2	**8**
Digital Road Sign or Lawn Sign	200	12	60	0	0	**272**

NOTES: "Printed Messages" includes fliers, brochures, bill stuffers, door hangers, handouts, messages printed on bill, etc. "Website Ads and Updates" includes updates of www.oxnard.gov/water and ventura.watersavingplants.com

9.3.1.3 Water Waste Tracking

The City responds to water violations, water waste reports, and leak alerts from its residents through its 311 incident reporting app and its water conservation hotline.

From 2021 to 2025, the City cataloged 2,118 alerts and issued over 1,457 warnings to reduce wasteful water use. Table 9-3 summarizes documented water waste/leak alerts and issued notices over the last five years. A significant amount of water waste notices were issued in 2022 due to the severe drought. Water conservation staff contacted customers via mail to notify them regarding observed water waste activities and to offer information such as rebates/incentives for helpful water conservation devices.

Table 9-3: Water Waste Tracking Summary 2021 - 2025

	2021	2022	2023	2024	2025	TOTAL
Log Entries	115	1,102	594	151	156	**2,118**
Warnings/Notices Issued	48	762	464	90	93	**1,457**

NOTES: Additional warnings and notices, which have been documented in the City's alert logs, were given in person by staff, by phone or email.

9.3.1.4 Device Retrofitting

The City offers free retrofits of bathroom and irrigation fixtures to promote water conservation. Free devices were offered every year for the last five years. In 2021, the City completed landscape audits and distributed water-efficient hose nozzles, moisture meters, shower timers, and more. Due to COVID-19 and the social distancing measures in 2021, Oxnard implemented a pilot Curbside Water Conservation Program where customers were provided with water-efficient devices to conserve water at home. Table 9-4 provides an annualized summary of distributed water devices and fixtures.

Table 9-4: Device Retrofits 2021-2025

RETROFIT/EXCHANGE DEVICE	2021	2022	2023	2024	2025	TOTAL
Shower Heads	1,137	500	750	697	649	**3,733**
Kitchen Faucet Aerators	30	15	0	0	0	**45**
Bathroom Faucet Aerators	2,000	300	348	97	0	**2,745**
Toilet Flapper	250	0	0	0	0	**250**
Toilet Leak Detector Tablets	850	740	2,410	2,855	426	**7,281**
Moisture Meters	750	500	500	572	408	**2,730**
Precision Irrigation Nozzles	1,500	700	700	932	1,024	**4,856**
Shower Timers	1,000	1,000	2,000	2,148	1,998	**8,146**
OVERALL TOTAL						**29,786**

9.3.1.5 Rebates

Oxnard residents who wish to upgrade to high-efficiency appliances and irrigation devices, as well as remove turf, are directed to the bewaterwise.com (SoCal Water$mart) website. Rebate information and bewaterwise.com links are also found on the City's website (Oxnard.gov/water). The rebate incentives are offered and managed by MWD in collaboration with CMWD. The City has actively promoted these residential and commercial rebates through bill inserts and social media, with approximately 1,268 customers taking advantage of the program since 2015. A summary of participation in rebate programs is provided in Table 9-4 and Table 9-5.

Table 9-5. Rebate Program Implementation, Participation Counts

	2021	2022	2023	2024	2025	Total
Faucet Aerator	0	0	10	57		67
High-Efficiency Clothes Washer	173	158	113	59		503
High-Efficiency Toilet	5	1	6	2		14
Low-Flow Showerhead			34	88		122
Rain Barrel	4	6	9			19
Rotating Nozzle		15	73	22		110

	2021	2022	2023	2024	2025	Total
Hose Bib Irrigation Controller	4					4
Weather Based Irrigation Controller	18	17	19	16		70
Turf	12	20	38	4		74

Table 9-6. Rebate Program Implementation, Total Rebate Values[1]

	2021	2022	2023	2024	2025	Total
Faucet Aerator	$0	$0	$43	$249		$292
High-Efficiency Clothes Washer	$16,605	$14,980	$11,815	$6,490		$49,890
High-Efficiency Toilet	$325	$65	$390	$130		$910
Low-Flow Showerhead			$441	$1,153		$1,594
Rain Barrel	$140	$210	$315			$665
Rotating Nozzle		$30	$593	$44		$667
Hose Bib Irrigation Controller	$140					$140
Weather Based Irrigation Controller	$1455	$1,608	$1,998	$1,419		$6,480
Turf	$34,250	$71,381	$400,099	$48,303		$554,033
Total	$52,915	$88,274	$415,694	$57,788		$614,671

1. Values are rounded to the nearest dollar.

9.3.2 Implementation to Achieve Water Use Targets

Through the implementation of its active water conservation program, the City has met its Interim Water Use Target for 2015 and its Confirmed Water use Target for 2020. To maintain this level of water use as well as meet new future efficiency goals for CWOL Regulation compliance, the City intends to continue building and designing its outreach and programs to provide specific support for different customer sectors as appropriate.

9.4 Water Use Objectives (Future Requirements)

During the next five years, the City will continue its traditional outreach efforts while seeking improvements and innovation. This includes expanded use of data and new tools to create tailored programs that drive greater water use efficiency. The City will continue preparing to meet State-mandated water use objectives established under AB 1668 and SB 606 as part of California's Making Conservation a California Way of Life framework. Through enhanced data analysis and targeted outreach efforts, the City will work to identify customers who may need assistance in improving water efficiency and develop messaging, programs, and incentives that support water-saving behaviors across customer sectors.

The City will also support implementation of new State regulations, including requirements related to the AB 1572 non-functional turf ban at commercial, industrial, and institutional properties, through education, outreach, and potential incentive programs that encourage the transition to more water-efficient landscapes. As an example of the City taking the lead on this, there is a Capital Improvement Program (CIP) project that the City has undertaken at four parks in the City that includes the removal of non-functional turf and replacing with native and drought tolerant plants. These parks were selected for being next to elementary schools that can be used by the students for field education that also include the native birds and pollinators that rely on these plants. Additionally, the City received a grant from the State Department of Water Resources to convert the non-functioning turf around the Civic Center into a native and drought tolerant landscape.

In addition, the water conservation program intends to leverage customer outreach and data collection capabilities from the new Automated Meter Infrastructure (AMI) system. These systems provide a wide range of opportunities to educate customers, identify and catch leaks early, and improve customer service and business processes. With a larger data set of consumption information across usage sectors, patterns can be analyzed to identify potential water savings and efficiencies.

These programs, and others, will support the City's achievement of its water use objectives and ensure compliance with evolving State regulations while continuing to promote water efficiency as an Oxnard way of life.

10 Plan Adoption, Submittal, and Implementation

This section describes the completed steps taken to make the UWMP publicly available as well as adopt and submit the UWMP in accordance with the California Water Code.

IN THIS SECTION

- Completed Steps for UWMP and WSCP

10.1 Completed Steps for UWMP and WSCP

The 2025 UWMP and WSCP were made available for public review in May 2026[1], and a public hearing was held on June X, 2026, at the City Council meeting to receive public input on the draft documents. Per Government Code 6066, the public hearing was noticed in the [newspaper name] newspaper on May/June X, 2026, and noticed again on May/June X, 2026. Additionally, the City issued a notice to County of Ventura County more than 60 days prior to the public hearing. All notice documentation is included in Appendix D.

The City Council adopted the Final 2025 UWMP and the WSCP at a public meeting on June XX, 2026. Additionally, the City issued a notice to County of Ventura more than 60 days prior to the public hearing. A copy of the resolution of adoption is included in Appendix E.

This UWMP was submitted to DWR through the WUEData portal before the deadline of July 1, 2026, and will be available to the public on the City's website.

If City identifies the need to amend this UWMP or WSCP, it will follow the same procedures used previously for notification to cities, counties, and the public and for initial adoption.

[1] All highlighted text to be updated after public review and adoption.

Water Shortage Contingency Plan

This Water Shortage Contingency Plan (WSCP) is a detailed plan for how the City of Oxnard (City) intends to predict and respond to foreseeable and unforeseeable water shortages.

A water shortage occurs when the water supply is reduced to a level that cannot support typical demand at any given time. The WSCP is used to provide guidance to the City's governing body, staff, and the public by identifying anticipated shortages and response actions to allow for efficient management of any water shortage with predictability and accountability. Preparation provides the tools to maintain reliable supplies and reduce the impacts of supply interruptions due to a range of conditions including extended drought, production capacity limitations, catastrophic supply interruptions, or other unforeseen shortages.

IN THIS SECTION

- Water Supply Reliability Analysis
- Annual Supply and Demand Assessment
- Water Shortage Stages
- Shortage Response Actions
- Communication Protocols
- Compliance, Enforcement, and Legal Authority
- Financial Consequences
- Implementation

The WSCP describes the following:

Water Supply Reliability Analysis: Summarizes the City's water supply analysis and reliability and identifies any key issues that may trigger a shortage condition.

Annual Water Supply and Demand Assessment Procedures: Describes the key data inputs, evaluation criteria, and methodology for assessing the system's reliability for the coming year and the steps to formally declare any water shortage levels and response actions.

Six Standard Shortage Stages: Establishes water shortage levels to clearly identify and prepare for shortages.

Shortage Response Actions: Describes the response actions that may be implemented or considered for each stage to reduce gaps between supply and demand.

Communication Protocols: Describes communication protocols under each stage to ensure customers, the public, and government agencies are informed of shortage conditions and requirements.

Compliance and Enforcement: Defines compliance and enforcement actions available to administer demand reductions.

Legal Authority: Lists the legal documents that grant the City the authority to declare a water shortage and implement and enforce response actions.

Financial Consequences of WSCP Implementation: Describes the anticipated financial impact of implementing water shortage stages and identifies mitigation strategies to offset financial burdens.

Monitoring and Reporting: Summarizes the monitoring and reporting techniques to evaluate the effectiveness of shortage response actions and overall WSCP implementation. Results are used to determine if additional shortage response actions should be activated or if efforts are successful and response actions should be reduced.

WSCP Refinement Procedures: Describes the factors that may trigger updates to the WSCP and outlines how to complete an update.

Special Water Features Distinctions: Identifies exemptions for decorative features aside from pools and spas.

Plan Adoption, Submittal, and Availability: Describes the process for the WSCP adoption, submittal, and availability after each revision.

This WSCP was prepared in conjunction with the City's 2025 Urban Water Management Plan (UWMP) and is a standalone document that can be modified as needed. This document is compliant with the California Water Code (CWC) Section 10632 and incorporated guidance from the State of California Department of Water Resources (DWR) UWMP Guidebook (California Department of Water Resources 2026).

1.1 Water Supply Reliability Analysis

As part of the 2025 UWMP, the City performed a supply reliability analysis for normal, single-dry, and five-year consecutive dry periods. The analysis considered different factors that influenced the City's various supply sources. The City has a very diverse supply portfolio and will manage it to meet customer demands under all water year scenarios. However, the City will continue to promote conservation as an important component of the portfolio that may be more cost effective than use of other supplies.

The 2025 UWMP also includes a Drought Risk Assessment (DRA) to analyze supply reliability for 2026-2030 considering normal, unconstrained demand. Unconstrained demand refers to the typical demand not influenced by other factors, such as demand reduction or limitations on use. The DRA assessed future reliability based on consideration of historical supply availability and potential changes to historical conditions in the future. While the Water Service Reliability and DRA of the 2025 UWMP identify the ability meet demand under most historical and anticipated dry year conditions, there is the potential for supply to not meet unconstrained demands through 2050 without conservation. Furthermore, there is potential for supply to be significantly impacted by catastrophic factors, such as natural disasters and operational/infrastructure failure events. This WSCP addresses the process to assess and address shortages under these catastrophic conditions.

1.2 Annual Water Supply and Demand Assessment

The City performs an Annual Water Supply and Demand Assessment (Annual Assessment) each year by July 1st for the following fiscal year to determine if there is a need to implement the WSCP and to what extent. Key data inputs, evaluation criteria, and procedures for developing the Annual Assessment are described in this section.

1.2.1 Key Data Inputs

Key data inputs and their sources for the Annual Assessment are summarized in Table 1.

Table 1. Key Data Inputs for the Annual Assessment

KEY DATA INPUT	SOURCE
City of Oxnard Groundwater	City production reports and supply allocations
United Water Conservation District (United) O-H Groundwater	City production reports and supply allocations
Calleguas Municipal Water District (Calleguas) Imported Water	Each spring, the City provides a water use projection to Calleguas for the following five years. Oxnard and the Port Hueneme Water Agency share an allotment, which is based on the historical 10-year use. **The City is not limited by the allotment and may purchase more water if necessary. The City tries to avoid using Calleguas water as much as possible to keep costs down.*
Recycled Water	City production reports

1.2.2 Evaluation Criteria

Staff will use the key data inputs and Annual Assessment procedures to evaluate supply reliability. Supply reliability is based on dry year supply availability and typical unconstrained demand, as calculated in the City's UWMP. The City will determine supply levels in the Annual Assessment and calculate if there is a shortage, compared to normal year supply conditions. The City will also consider any shortage declarations established by Calleguas Municipal Water District (Calleguas), a member agency of the Metropolitan Water District of Southern California (Metropolitan), in the analysis.

Additional conditions that may be evaluated include the loss of any supply sources or key infrastructure (such as the Oxnard-Hueneme pipeline), any natural disasters, or State-mandated declarations or policies. In the event that any critical components are impacted and unable to support the City, the City will reevaluate and work to regain supply sources as quickly as possible.

1.2.3 Annual Water Supply and Demand Assessment Procedure

The City performs the Annual Assessment prior to July 1st each year. Steps to conduct the Annual Assessment are as follows:

1. The Annual Assessment is led by the Water Resources Manager. The Water Resources Manager shall coordinate with conservation, production, distribution, recycled water, and development staff as necessary to prepare the Annual Assessment.
2. Staff will evaluate supply amounts for the coming year.
    a. City groundwater: Staff will analyze historical production and anticipated production.
        i. Determine if there are any maintenance needs that would require a shut-down of any wells.
        ii. Determine if there is a need to decrease typical pumping to protect against seawater intrusion or contamination.
        iii. Fox Canyon Groundwater Management Agency (FCGMA) sets allocations for water years (October 1 – September 30). It is expected that FCGMA will communicate allocations to Oxnard in a timely manner. Based on the past, allocations have been set no less than one year in advance.
    b. United Water Conservation District (United) Groundwater
        i. Distinguish if there are any planned outages that would restrict United from delivering water to Oxnard.
    c. Calleguas imported water availability
        i. Distinguish if there are any limitations on allocations imposed by Calleguas or Metropolitan.
    d. Recycled Water
        i. Recycled water supply should be stable and quantities known once in full operation. The City will track recycled water supply and storage amounts.
    e. Infrastructure updates or limitations
        i. Staff will identify any pieces of infrastructure that are out of service or in need of maintenance within the next year.
        ii. Staff will identify any on-going water supply projects that will be complete within the next year and will be available as a supply source.
    f. Staff will track supply for the previous year by supply source on a monthly basis to develop estimates of available supply for the coming year.
3. Staff will forecast the demand for the coming year.

a. Staff will continue to monitor demand for supply blending purposes.
b. Staff will track demand for the previous year by customer class on a monthly basis to inform demand estimates for the coming year.
c. Staff will consider any drought declarations in place as determined by the U.S. Drought Monitor (USDM), which is updated each Thursday to show the location and intensity of drought across California using a five-category system, from Abnormally Dry (D0) conditions to Exceptional Drought (D4).
d. Staff will consider any State-mandated declarations and policies that may influence water demand.

4. Demands will first be met by local supply sources to the extent possible, and then supplemented with imported water from Calleguas.
5. Staff will analyze the total supply available compared to normal supply to determine if there are supply reductions. The percentage of deficit will be calculated and related to the shortage stages identified in the following section.
6. Staff will analyze the total supply available for the coming year and compare to the future demand to determine if there is a supply/demand gap. The percentage of deficit will be calculated and related to the shortage stages in this WSCP.
    a. Staff will assess if there is a need to implement the WSCP and the corresponding shortage stage declaration.
7. Staff will compile the Annual Assessment findings and may present recommendations to the Public Works and Transportation Committee, then to the City Council, if a shortage is anticipated. The City Council will determine if a shortage stage should be declared and may make that declaration.

1.3 Six Standard Water Shortage Levels

Water suppliers must align with six standard water shortage levels as mandated by water code. Shortage levels indicate the gap between supply and demand compared to normal year conditions. DWR standardized six shortage levels to provide a consistent regional and statewide approach to measure water supply shortage conditions. The six shortage levels correspond to 10-, 20-, 30-, 40-, 50-percent (%), and greater than 50% shortage compared to the normal reliability conditions. However, a water supplier may use its own shortage levels if a crosswalk is included relating its existing shortage levels to the six standard levels. The crosswalk between the City's four levels and the standard water shortage levels is shown in Table 2.

Table 2. DWR 8-1 Water Shortage Contingency Plan Levels Crosswalk

CITY OF OXNARD SHORTAGE LEVEL	PERCENT REDUCTION GOAL	STANDARD WSCP LEVEL	PERCENT SHORTAGE LEVEL
1	≤15%	1	10%
		2	20%
2	15 - 25%	3	30%
3	25 - 35%	4	40%
		5	50%
4	>35%	6	>50%

1.4 Shortage Response Actions

The City developed a variety of shortage response actions to implement during each given shortage stage. In the event of a water shortage emergency, the City will evaluate the cause of the emergency to help inform which response actions should be implemented. Depending on the nature of the water shortage, the City can elect to implement one or several response actions to mitigate the shortage and reduce gaps between supply and demand. The City has identified actions that fall within supply augmentation, demand reduction, operational changes, and additional mandatory restrictions, as recommended by DWR. If necessary, the City may adjust actions or adopt additional actions not listed.

During a declared water shortage condition, the water sources available to the City will be put to the maximum beneficial use to the greatest extent possible. The waste or unreasonable use of water will be prevented, and water available will be conserved for public welfare in the interests of City residents.

Examples of the City's general water waste prohibitions and restrictions include limits on outdoor irrigation watering hours; limits on running water duration; no run-off; drinking water service upon request (water served only upon customer request at public places where food is served); various prohibitions in the commercial sector; no filling or refilling of swimming pools; and waste in general, including any indiscriminate use of water which is wasteful.

1.4.1 Demand Reduction

The City has identified a variety of potential demand reduction actions to offset supply shortages. These actions include, but are not limited to conservation and rebate programs, leak detection and repair, covers for pools and spas, equipping hoses with automatic shut-off nozzles, and others as shown in Table 3.

Table 3. DWR 8-2 Demand Reduction Actions

SHORTAGE LEVEL	DEMAND REDUCTION ACTIONS	SHORTAGE GAP REDUCTION, AFY	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
All	Expand Public Information Campaign			Yes
All	Reduce System Water Loss			Yes
All	Other - Customers must repair leaks, breaks, and malfunctions in a timely manner	5,196	EPA Cases in Water Conservation: How Efficiency Programs Help Water Utilities Save Water and Avoid Costs (United States Environmental Protection Agency, Office of Water, 2002)	Yes
All	Other water feature or swimming pool restriction		Draining of pools or refilliong shall be done only for health and safety reasons.	Yes
All	CII - Restaurants may only serve water upon request	12	Southwest Florida Water Management (Southwest Florida Water Management District, 2018)	Yes
All	CII - Lodging establishment must offer opt out of linen service			Yes
All	CII - Commercial kitchens required to use pre-rinse spray valves	1,824	EPA WaterSense, Saving Water in Restaurants (United States Environmental Protection Agency, 2012)	Yes
All	Pools and Spas - Require covers for pools and spas	26	Arlington, Virginia, Water & Utilities. (Arlington County Government, n.d.)	Yes
All	Landscape - Other landscape restriction or prohibition		Free flowing hoses are prohibited; automatic shut-off hoses are required.	Yes
All	Landscape - Restrict or prohibit runoff from landscape irrigation			Yes
All	Landscape - Limit landscape irrigation to specific times	301	Texas Living Waters (Texas Living Waters Project, 2018)	Yes
All	Landscape - Limit landscape irrigation to specific days	840	CalWep WSCP Toolkit 2021; City of Sacramento and City of Clovis; AWE Use and Effectiveness of Municipal Irrigation Restrictions During Drought Study Report, January 2020. (California Water Efficiency Partnership, 2021)	Yes

SHORTAGE LEVEL	DEMAND REDUCTION ACTIONS	SHORTAGE GAP REDUCTION, AFY	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
All	Landscape - Limit landscape irrigation to specific days		Irrigation of parks, school ground areas, and road median landscaping will not be permitted more than twice a week and only if necessary.	
All	Landscape - Prohibit certain types of landscape irrigation		Irrigation of ornamental turf on public medians with potable water prohibited.	Yes
All	Landscape - Other landscape restriction or prohibition		Limits on watering duration. Watering or irrigation of lawns, landscape or other vegetated area with potable water using a landscape irrigation system or a watering device that is not continuously attended is limited to no more than 15 minutes per day per station. This does not apply to landscape irrigation systems that exclusively use high efficiency irrigation equipment, very low-flow drip type irrigation systems when no emitter produces more than two gallons of water per hour, and weather based controllers or high-efficiency stream rotor sprinklers.	
All	Landscape - Restrict or prohibit runoff from landscape irrigation		Irrigation of newly constructed home and building exteriors with potable water is prohibited unless drip or microspray systems are used.	Yes
All	Landscape - Other landscape restriction or prohibition		Golf course water use shall be limited. Limitation on the irrigation of roughs shall be implemented before limitations on fairway irrigation. Efficient use of recycled water on any golf course shall not be limited.	
All	Landscape - Other landscape restriction or prohibition		Application of potable water to landscapes during and within 48 hours after measurable rainfall is prohibited.	Yes
All	Other - Require automatic shut of hoses	8	Maryland Department of the Environment (Maryland Department of the Environment, n.d.)	Yes

SHORTAGE LEVEL	DEMAND REDUCTION ACTIONS	SHORTAGE GAP REDUCTION, AFY	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
All	Other - Prohibit use of potable water for construction and dust control	2,361	Maryland Department of the Environment (Maryland Department of the Environment, n.d.)	Yes
All	Other		The City may not issue new construction meters or short-term water use unless reclaimed or non-potable water is used, unless potable water is necessary to protect the health, safety, or welfare.	Yes
All	Other - Prohibit use of potable water for washing hard surfaces		No water use to clean surfaces. The use of running water from a hose, pipe, or faucet to clean buildings, pavement, tile, wood, plastic, driveways, parking lots, and other paved surfaces is prohibited, except for public health and safety reasons and then only with a hose and automatic shut-off nozzle.	Yes
All	Decrease Line Flushing	143	CalWep WSCP Toolkit 2021; City of Clovis (California Water Efficiency Partnership, 2021)	Yes
All	Implement or Modify Drought Rate Structure or Surcharge			Yes
All	Other	4,936	All types of rebates; EPA Cases in Water Conservation: How Efficiency Programs Help Water Utilities Save Water and Avoid Costs; Evaluating the Effectiveness of a Water Conservation Campaign: Combining Experimental and Field Methods (United States Environmental Protection Agency, Office of Water, 2002)	Yes
2 & Up	Other		Reduce indoor and outdoor water use by specified percentage as determined (based on Shortage Stage). Contact the City Water Division or visit OxnardWater.org for additional tips and techniques to reduce water use.	

SHORTAGE LEVEL	DEMAND REDUCTION ACTIONS	SHORTAGE GAP REDUCTION, AFY	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
2 & Up	Other		The use of water from fire hydrants shall be limited to fire fighting and related activities and other uses of water for municipal purposes shall be limited to activities necessary to maintain the public health, safety, and welfare.	
2 & Up	Other		Commercial car wash and laundry systems. Installation of new or replacement non re-circulating water systems in commercial conveyor car wash or commercial laundry systems is prohibited.	
2 & Up	Other		The manager shall grant prior approval for water to be used on a one-time or short-term basis for construction and dust control. The user shall submit to the manager its water use plan at least 30 days in advance of the proposed use.	
3 & Up	Other		Commercial/industrial cooling systems: installation of new or replacement single pass cooling systems in commercial or industrial buildings is prohibited.	Yes
3 & Up	Water Features - Restrict water use for decorative water features, such as fountains			Yes
3 & Up	Water Features - Restrict water use for decorative water features, such as fountains		Where and when available, approved non-potable water shall be used to fill or refill recreational or ornamental lakes, ponds, or fountains. When using non-potable water, the user shall post signs in conspicuous areas identifying the fact that non-potable water is being used. Newly installed or replacement ponds and fountains shall include recirculation pump(s) that maximize the efficiency and reuse of fill water.	
3 & Up	Other water feature or swimming pool restriction		Watering to maintain the level of water in swimming pools shall occur only when essential.	

SHORTAGE LEVEL	DEMAND REDUCTION ACTIONS	SHORTAGE GAP REDUCTION, AFY	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
4 & Up	Other - Prohibit vehicle washing except at facilities using recycled or recirculating water			
4 & Up	Landscape - Other landscape restriction or prohibition		Depending on the drought severity, the use of potable water for irrigation uses may be restricted or prohibited. The manager shall have the right to shut off water service to any such irrigation service upon seven days advance notice to the customer.	Yes
4 & Up	Other		Issuance of building permits which require new or expanded water service may be limited or withheld, except to protect the public's health, safety and welfare, or in cases which meet the City Council adopted conservation and offset requirements.	Yes

1.4.2 Supply Augmentation

The City has a diverse supply portfolio and is currently looking to expand supply with additional permanent sources as discussed in Chapter 6 of the UWMP. The City expects to meet any supply shortages through adaptive supply portfolio management, effective communication and outreach efforts, operational changes, and demand reduction efforts from their customers.

1.4.3 Operational Changes

The City has identified several possible changes to maximize supply and reduce demand during a water shortage stage. These potential City actions could include, but are not limited to:

- Flush watermains only on a complaint basis and/or suspend or modify its routine flushing schedule to reduce operational water use.
- Monitor construction meters and fire hydrant meters for efficient water use. In the event that a meter identifies wastes water, the City will take swift action to correct errors and ensure efficiency.
- Restrict issuance of new permits for hydrant-construction or temporary construction meters.
- Limit issuance of building permits which require new or expanded water service, except in cases that protect public health, safety and welfare as deemed by the City Council.
- In severe water shortages, implement water emergency tiered pricing, pursuant to the requirements of Proposition 218 and in accordance with California Law.
- Conduct water waste patrols in cooperation with staff from other departments.
- Suspend consideration of annexations to its service area, unless the annexation increases the water supply available to the City more than the anticipated demands of the property to be annexed.

1.4.4 Additional Mandatory Restrictions

The City has identified additional mandatory restrictions to implement during a water shortage. Such restrictions will first be evaluated on the type of shortage condition. Restrictions could include, but are not limited to:

- Irrigation of newly constructed home and building exteriors with potable water is prohibited unless drip or micro spray systems are used.
- Irrigation of ornamental turf on public medians with potable water is prohibited.
- The use of potable water for sanitation, irrigation and construction purposes, including but not limited to dust control, settling of backfill, flushing of plumbing lines, and washing of equipment, buildings and vehicles, shall be prohibited in all cases where it has been determined that use of reclaimed, recycled or other forms of non-potable water use is a feasible alternative.
- Free flowing hoses are prohibited. Automatic shut-off hoses are required.
- No use of water to clean surfaces. The use of running water from a hose, pipe, or faucet to clean buildings, pavement, tile, wood, plastic, driveways, parking lots, and other paved surfaces is prohibited, except for public health and safety reasons and then only with a hose with an automatic shut-off nozzle.
- Application of potable water to landscapes during and within 48 hours after measurable rainfall is prohibited.
- Prohibit vehicle washing except at facilities using recycled or recirculating systems.

1.4.5 Emergency Response Plan

Water supplies as well as other public facilities can be negatively impacted by catastrophic events, including regional power outages and earthquakes. The City of Oxnard Water Division Water System Emergency Response Plan (ERP) (AECOM for the City of Oxnard Water Division, January 2020) identifies action plans for various emergencies. Compared to many other purveyors, the City is well-positioned to respond to such events because:

- The City has multiple sources of water, including Calleguas, United and City wells.
- Calleguas has an Imported Water Outage Protocol (IWOP). The IWOP is a local planning effort and follows a recommendation from the Calleguas' Water Supply Alternatives Study to "prepare and codify a methodology for demand reduction during an outage."
- The City's pipeline system has a tremendous by-pass system ("looping"), referring to the interconnection of pipelines and avoidance of critical pipelines where a break due to a seismic event, for example, would leave substantial areas of the City without water.
- In terms of a regional power outage, the City has back-up diesel generators at its major facilities (i.e., blending stations and water wells). United also has generation capacity. There is also additional pumping capacity plus diesel-powered generation capacity at all wellfields and the Desalter facility.

1.4.6 Seismic Risk Assessment and Mitigation Plan

The City completed an update to their Emergency Response Plan (ERP) and performed a Risk and Resiliency Assessment (RRA) (AECOM for the City of Oxnard Water Division, January 2020) that analyzes seismic events and mitigation actions to offset any impacts from such an event. The ERP and RRA were performed in accordance with America's Water Infrastructure Act (AWIA) of 2018. The purpose of the RRA and ERP is to meet the AWIA compliance requirements and plan for long-term resilience of the City's infrastructure.

The RRA assessed the City's water system to identify critical assets that may be vulnerable to malevolent threats and natural hazards such as a seismic event, as well as identified measures that can be taken to reduce risk and enhance resilience from service disruption for the benefit of customers. The RRA identifies and characterizes both infrastructure-specific and system-wide vulnerabilities and threats in addition to the consequences of disruption. The RRA also recognizes various options in addressing and mitigating risk due to intentional or accidental threats as well as natural hazards.

The ERP includes prevention and detection measures for a wide range of emergency situations. In the case of a seismic event, the ERP includes specific responses to mitigate damage and provide safety for staff during the event as well as documents detailed responses and action items to complete following the event.

The RRA, in conjunction with the ERP, charts a course for water system resilience. Since critical pieces of infrastructure and specific vulnerabilities are detailed in the RRA and critical response procedures are outlined in the ERP, the contents of these documents are confidential and for use by City staff only. However, the City can confirm that these plans meet the requirements set forth by AWIA and evaluate seismic risks and mitigation actions to the City's infrastructure.

The City also participated in the development of the 2022 Ventura County Multi-Jurisdictional Hazard Mitigation Plan (MHMP) (Tetra Tech, County of Ventura, Ventura County Sheriff Emergency Services, 2022). The MHMP analyzed the vulnerability of water facilities, including various lift stations, blending stations, and the wastewater treatment plant. The MHMP identified potential hazards that could affect the City, such as earthquakes and landslides. In addition, the MHMP summarizes financial, legal, and regulatory resources to mitigate the effects if any hazard were to occur, as well as mitigation projects, programs, and other actions. Furthermore, since the City obtains water from Calleguas and United, it is important to note that both Calleguas and United also participated in development of the MHMP.

1.4.7 Shortage Response Action Effectiveness

The City has estimated the effectiveness of shortage response actions when data pertaining to such actions is available. Estimates of the effectiveness of actions has been included in Table 3, assuming these actions are supported by successful communication and outreach efforts. A summary of the potential savings by each action class is provided in Table 4.

Table 4. Estimated Savings by Response Action Type

ACTION TYPE	ESTIMATED POTENTIAL SAVINGS, AFY	PERCENTAGE OF ESTIMATED SAVINGS BY ACTION TYPE
Demand Reduction	7,429	80%
Operational Changes	143	2%
Additional Mandatory Restrictions	1,738	19%
Communication Efforts	-	-
Total	**9,310**	**100%**

1.5 Communication Protocols

The City has developed an extensive plan to communicate the declaration of a shortage stage, inform restrictions, and provide updates during a water shortage stage. The City's Code authorizes the City Manager to issue notices pertaining to the WSCP and implement public outreach through press releases, print and broadcast media, and written and verbal communications to specifically impacted industry groups (such as public services, hotels, golf courses, school districts, developers, and restaurants) (City of Oxnard, n.d.). The City's website highlights water conservation and during a shortage event, would be consistently updated to reflect the most current information to help inform the community. Additionally, postcard notifications may be mailed directly to customers to explain current water restrictions and messages may be included with monthly water bills. A summary of actions the City could potentially take during a specific shortage stage is outlined in Table 5.

Table 5. Communication and Outreach Actions by Shortage Stage.

COMMUNICATION ACTION	STAGE 1	STAGE 2	STAGE 3	STAGE 4	STAGE 5	STAGE 6
Maintain public information and outreach focused on long term, ongoing conservation actions (e.g., rebates on water saving appliances, repairing leaks, and low water use landscaping).	X	X	X	X	X	X
Initiate public information and advertising campaign.		X	X			
Utilize regional partnerships for messaging and implementation.		X	X	X	X	X
Focus messaging on shortage status and immediate behavioral changes.		X	X			
Develop and distribute specific drought or incident information to customers.		X	X	X	X	X
Special mailing/utility bill insert notifying of shortage stage and copy of stage requirements.		X	X	X	X	X
Offer presentations to all local civic groups, HOAs and neighborhood associations. Work with groups to post City messaging/literature or links on respective websites, social media, or meetings.		X	X	X	X	X
Further expand outreach efforts.			X	X	X	X
Modify messages to reflect more severe shortage condition and need for immediate behavioral changes.			X	X	X	X
Update website with required percent demand reduction information.			X	X	X	X
Open drought or shortage information center and establish conservation hotline.				X	X	X
Initiate water waste enforcement through fines/patrols.				X	X	X
Provide weekly updates on water shortage emergency (media briefings, web update, local newspaper, online ads, social media outlets).						
Modify utility billing system and bill format to accommodate residential rationing; add penalty rates.					X	X
Expand water waste patrols to 7 days a week.					X	X
Provide daily updates on water shortage emergency (media briefings, web update, local newspaper, online Ads, social media outlets).						X
Implement severe crisis communications plan and campaign.						X

1.6 Compliance and Enforcement

The City's Water Conservation staff is diligent in monitoring water waste and the City website encourages the public to report water waste activities. The Water Conservation staff proactively monitors consumption and responds to water waste reports.

Enforcement of water waste prohibitions and water shortage–stage restrictions is implemented under Oxnard City Code Chapter 22, including Articles VIII and IX, as amended. Enforcement authority was strengthened through ordinance amendments adopted during the 2022 drought emergency and includes administrative citations, fines, flow-restricting devices, and discontinuation of water service, subject to due process pursuant to Chapter 22 (including Section 22-140).

Chapter 22, Article VIII of the City's Code (City of Oxnard, n.d.) pertains to water waste and outlines the prohibitions identified in this WSCP. Sections 22-136 and 22-137 define the consequences for customers that violate any of the restrictions implemented to reduce demands at any time and during a water shortage stage.

1.7 Legal Authorities

The City's first water shortage stage procedures were established in 1991 by Ordinance No. 2246 but were later entirely repealed and restated by Ordinance No. 2729 in 2006. This ordinance established new water conservation and water shortage response procedures under Chapter 22, Article IX of the Oxnard City Code. Article IX, which is also titled the "City of Oxnard Water Conservation and Water Shortage Response Procedures," was later amended with language of Ordinance No. 2810 in 2009, which also provided amendments to Articles VIII and X, on Water Waste and Recycled Water Use, respectively. Copies of Ordinances 2729, 2810 and 2826 are provided online at: https://codelibrary.amlegal.com/codes/oxnard/latest/oxnard_ca/0-0-0-45641

Following 2021, the City adopted additional amendments to Chapter 22 during the 2022 drought emergency to update water waste restrictions and enforcement procedures and to align municipal enforcement authority with the Water Shortage Contingency Plan framework. The currently codified provisions of Chapter 22 should be consulted for the requirements in effect at the time of any water shortage declaration.

These amendments to City Code were deemed necessary to manage the City's potable water supply and to avoid or minimize the effects of drought and water supply variations within the City. The ordinances establish permanent water conservation standards to maximize water use efficiency for non-shortage conditions and refines response actions implemented during water shortage conditions. The conservation resulting from improved water use efficiency should help ensure a reliable and sustainable minimum supply of water for the public health, safety and welfare by maintaining local and imported water resources.

Article IX of the City's Code provides the City Council with the legal authority to declare, by resolution, that water shortage conditions are present within the City and establish mandatory water conservation measures associated with the shortage conditions. These measures shall remain in effect until the City Council declares that water shortage conditions have eased and modified or eliminated shortage responses (City of Oxnard, n.d.).

The City Council adopts mandatory water conservation measures by resolution as needed to respond to statewide, regional, or local drought and water shortage conditions, including actions taken during the 2022–2023 drought period, to operationalize and implement the WSCP shortage stages and associated response actions.

1.8 Financial Consequences of WSCP

The City's water system is financially managed as an enterprise fund. The current water rate structure includes a fixed charge and a variable charge. Fixed charges are based on meter size and will not be impacted by reduced water sales. The variable charge will be impacted by reduced water consumption. Oxnard currently "passes through" rate increases for water purchased from Calleguas and United. Oxnard does not currently have a drought rate structure or surcharge in place but will evaluate all options during the next water rate process.

To offset financial impacts from mandated water conservation during shortage conditions, Oxnard will consider delaying capital improvement projects; however, delaying capital improvement projects is not ideal for long-term or severe revenue losses. If Oxnard decides to increase future water rates or implement penalty fees for overuse, such actions may be subject to the requirements of California Proposition 218 (Prop 218).

Prior to the 2012-2015 drought period, the City had reserve revenues capable of accommodating a 10 to 20 percent reduction in revenues, which were used in the 2012-2015 drought period to offset losses.

The financial impacts outlined in this section apply to all shortage stages.

1.9 Monitoring and Reporting

The water savings from implementation of the WSCP will be determined based on measurements of consumption from water meters and well production meters. Customer meters will be read every month in Stages 1 and 2 and will increase to weekly readings in Stages 3 – 6. Production meters will be read on a weekly basis for a general analysis.

The City is in the process of implementing Advanced Metering Infrastructure (AMI). These automated tools will enable the City to track consumption and meet efficiency goals more effectively.

1.10 WSCP Refinement Procedures

The WSCP is best prepared and implemented as an adaptive management plan. The City will use results obtained from their monitoring and reporting program to evaluate any needs for revisions. Potential changes to the WSCP that would warrant an update include, but are not limited to, any changes to trigger conditions, changes to the shortage stage structure, changes to rate structures or development of water budgets, and/or changes to customer reduction actions.

Any prospective changes to the WSCP would need to be presented to the City Council for approval. The City will hold a public hearing, obtain any comments and formally adopt the updated WSCP. Notices for refinement and the public hearing date will be published in the local newspaper in advance of any public meetings.

1.11 Special Water Feature Distinction

The City evaluates special water features. The City expects to restrict water use to special decorative features starting in Stage 3 shortages. Special decorative features apply to items that use water for aesthetic purposes. Aesthetic purposes pertain to ornamental fountains, ponds, or other decorative features. If necessary, customers may use water for decorative features to sustain aquatic life.

1.12 Plan Adoption, Submittal, and Availability

The WSCP will be presented for adoption to the City Council at a public meeting. The City Council and members of the public may submit any comments prior to approval and adoption. The WSCP will be submitted to DWR at the same time as the 2025 Urban Water Management Plan.

The WSCP will be made available to all staff, customers, and any affected cities, counties, or other members of the public through the City's website, located under the Water Conservation Department.

Appendix B Reduced Delta Reliance

B

B

Appendix B. Demonstration of Reduced Delta Reliance

Quantifying Regional Self-Reliance and Reduced Reliance on Water Supplies from the Delta

1. Background

Under the Sacramento-San Joaquin Delta Reform Act of 2009, state and local public agencies proposing a covered action in the Delta, prior to initiating the implementation of that action, must prepare a written certification of consistency with detailed findings as to whether the covered action is consistent with applicable Delta Plan policies and submit that certification to the Delta Stewardship Council. Anyone may appeal a certification of consistency, and if the Delta Stewardship Council grants the appeal, the covered action may not be implemented until the agency proposing the covered action submits a revised certification of consistency, and either no appeal is filed, or the Delta Stewardship Council denies the subsequent appeal.

An urban water supplier that anticipates participating in or receiving water from a proposed covered action such as a multi-year water transfer, conveyance facility, or new diversion that involves transferring water through, exporting water from, or using water in the Delta should provide information in their Urban Water Management Plans (UWMPs) that can then be used in the covered action process to demonstrate consistency with Delta Plan Policy WR P1, Reduce Reliance on the Delta Through Improved Regional Water Self-Reliance (WR P1).

WR P1 details what is needed for a covered action to demonstrate consistency with reduced reliance on the Delta and improved regional self-reliance. WR P1 subsection (a) states that:

> *(a) Water shall not be exported from, transferred through, or used in the Delta if all the following apply:*
>
> > *(1) One or more water suppliers that would receive water as a result of the export, transfer, or use have failed to adequately contribute to reduced reliance on the Delta and improved regional self-reliance consistent with all of the requirements listed in paragraph (1) of subsection (c);*
> >
> > *(2) That failure has significantly caused the need for the export, transfer, or use; and*
> >
> > *(3) The export, transfer, or use would have a significant adverse environmental impact in the Delta.*

WR P1 subsection (c)(1) further defines what adequately contributing to reduced reliance on the Delta means in terms of (a)(1) above.

> *(c)(1) Water suppliers that have done all the following are contributing to reduced reliance on the Delta and improved regional self-reliance and are therefore consistent with this policy:*
>
> > *(A) Completed a current Urban or Agricultural Water Management Plan (Plan) which has been reviewed by the California Department of Water Resources for compliance with the applicable requirements of Water Code Division 6, Parts 2.55, 2.6, and 2.8;*
> >
> > *(B) Identified, evaluated, and commenced implementation, consistent with the implementation schedule set forth in the Plan, of all programs and projects included in the Plan that are locally cost effective and technically feasible which reduce reliance on the Delta; and*
> >
> > *(C) Included in the Plan, commencing in 2015, the expected outcome for measurable reduction in Delta reliance and improvement in regional self-reliance. The expected*

> *outcome for measurable reduction in Delta reliance and improvement in regional self-reliance shall be reported in the Plan as the reduction in the amount of water used, or in the percentage of water used, from the Delta watershed. For the purposes of reporting, water efficiency is considered a new source of water supply, consistent with Water Code section 1011(a).*

The analysis and documentation provided below include all the elements described in WR P1(c)(1) that need to be included in a water supplier's UWMP to support a certification of consistency for a future covered action.

2. Demonstration of Regional Self-Reliance

The methodology used to determine the City of Oxnard's (City) improved regional self-reliance is consistent with the approach detailed in DWR's UWMP Guidebook Appendix C (Guidebook Appendix C), including the use of narrative justifications for the accounting of supplies and the documentation of specific data sources. Some of the key assumptions underlying the City's demonstration of reduced reliance include:

- All data were obtained from the current 2025 UWMP or previously adopted UWMPs and represent average or normal water year conditions.
- All analyses were conducted at the service area level, and all data reflect the total contributions of the City and its customers.
- No projects or programs that solely use water from the Delta and are described in the UWMPs as "Projects Under Development" were included in the accounting of supplies. Future local supply projects are included in this analysis.

Baseline and Expected Outcomes

To calculate the expected outcomes for measurable reduction in Delta reliance and improved regional self-reliance, a baseline is needed to compare against. This analysis uses a normal water year representation of 2010 as the baseline, which is consistent with the approach described in the Guidebook Appendix C. Data for the 2010 baseline were taken from the City's 2005 UWMP as UWMPs generally do not provide normal water year data for the year that they are adopted (i.e., 2005 UWMP forecasts begin in 2010, 2010 UWMP forecasts begin in 2015, and so on).

Consistent with the 2010 baseline data approach, the expected outcomes for reduced Delta reliance and improved regional self-reliance for 2015, 2020, and 2025 were taken from the City's 2010, 2015, and 2020 UWMPs, respectively. Expected outcomes for 2030-2050 are from the current 2025 UWMP. Documentation of the specific data sources and assumptions are included in the discussions below.

Service Area Demands without Water Use Efficiency

In alignment with the Guidebook Appendix C, this analysis uses normal water year demands, rather than normal water year supplies to calculate expected outcomes in terms of the percentage of water used. Normal water year demands serve as a proxy for the amount of supplies that would be used in a normal water year, which helps alleviate issues associated with how supply capability is presented to fulfill requirements of the UWMP Act versus how supplies might be accounted for to demonstrate consistency with WR P1.

Because WR P1 considers water use efficiency savings a source of water supply, water suppliers can calculate their embedded water use efficiency savings based on changes in forecasted per capita water use since the baseline. As explained in the Guidebook Appendix C, water use efficiency savings must be added back to the normal year demands to represent demands without water use efficiency savings accounted for; otherwise, the effect of water use efficiency savings on regional self-reliance would be overestimated. Table C-1 shows the results of this adjustment for the City. Supporting narratives and documentation for all the data shown in Table C-1 are provided below.

Service Area Demands with Water Use Efficiency

The service area demands shown in Table C-1 represent the total water demands for the City's service area. The demand data shown in Table C-1 were collected from the following sources:

- Baseline (2010): the City's 2005 UWMP, Table 4-3
- 2015: the City's 2010 UWMP, Table 2-16
- 2020: the City's 2015 UWMP, Table 4-3
- 2025: the City's 2020 UWMP, Table 4-5
- 2030-2050: the City's 2025 UWMP, Table 4-7

Non-Potable Water Demands

Over the years, the City has developed and implemented the Groundwater Recharge Enhancement and Treatment (GREAT) Program to establish recycled water for indirect potable reuse and increase local supply reliability. The City owns and operates an advanced water purification facility (AWPF) with an initial capacity of 7,000 AFY and future planned expansions. Details on recycled water are discussed in Chapter 6 of the 2025 UWMP. The non-potable water demand data shown in Table C-1 represents recycled water demand estimates directly used by customers. Water supply from indirect potable reuse (IPR) are used to meet potable demands, and are counted under supplies contributing to regional self-reliance.

Non-potable water demand data was collected from the following sources:

- Baseline (2010): the City's 2005 UWMP, Table 4-3
- 2015: the City's 2010 UWMP, Table 2-15 (no non-potable water demand as all water is projected to be used for IPR)
- 2020: the City's 2015 UWMP, Table 6-4, excluding IPR which is a potable supply
- 2025: the City's 2020 UWMP, Table 4-5 (no non-potable water demand as all water is projected to be used for IPR)
- 2030-2050: the City's 2025 UWMP, Table 4-7 (no non-potable water demand as all water is projected to be used for IPR)

Potable Service Area Demands with Water Use Efficiency

The "Potable Service Area Demands with Water Use Efficiency" was calculated by subtracting the "Non-Potable Water Demands" from "Service Area Demands with Water Use Efficiency."

Service Area Population

The population data shown in Table C-1 were collected from the following sources:

- Baseline (2010): the City's 2010 UWMP, Table 2-2
- 2015: the City's 2015 UWMP, Table 3-1
- 2020: the City's 2020 UWMP, Table 3-2
- 2025-2050: the City's 2025 UWMP, Table 3-2

Estimated Water Use Efficiency Since Baseline

The "Estimated Water Use Efficiency Since Baseline" was calculated using "Potable Service Area Demands with Water Use Efficiency" divided by "Service Area Population" and then comparing with 2010 Per Capita Water Use.

Service Area Water Demands without Water Use Efficiency

In Table C-2, the "Service Area Demands with Water Use Efficiency" was added to the "Estimated Water Use Efficiency Since Baseline" to obtain the "Service Area Water Demands without Water Use Efficiency Accounted For".

Supplies Contributing to Regional Self-Reliance

For a covered action to demonstrate consistency with the Delta Plan, WR P1 subsection (c)(1)(C) states that water suppliers must report the expected outcomes for measurable improvement in regional self-reliance. Table C-3 shows expected outcomes for supplies contributing to regional self-reliance both in the amount and as a percentage. The numbers shown in Table C-3 represent efforts to improve regional self-reliance for the City's service area and include the total contributions of the City and its customers. Supporting narratives and documentation for all the data shown in Table C-3 are provided below.

Water Use Efficiency

The water use efficiency information shown in Table C-3 is taken directly from Table C-2.

Water Recycling

The water recycling values shown in Table C-3 are taken directly from the non-potable water demands in Table C-1.

Advanced Water Technologies

The advanced water technology values shown in Table C-3 include projected supply from the City's AWPF used for IPR. The values were collected from the following sources:

- Baseline (2010): No supplies included.
- 2015: the City's 2010 UWMP, Table 2-15, shown as groundwater recharge
- 2020: the City's 2015 UWMP, Table 6-4, shown as groundwater recharge (IPR)
- 2025: the City's 2020 UWMP, Table 6-11, shown as ASR Recovered

Local and Regional Water Supply and Storage Projects

The Local and Regional Water Supply and Storage Projects include local groundwater using the City's groundwater supply, purchased groundwater from United Water Conservation District (UWCD), and groundwater pumped through sales of recycled water to agricultural users outside of the City's service area (Recycled Water Pump Back Allocation). The values were collected from the following sources:

- Baseline (2010): the City's 2010 UWMP, Table 3-1, shown as groundwater less brine losses.
- 2015: the City's 2010 UWMP, Table 3-1, shown as groundwater recharge less brine losses.
- 2020: the City's 2015 UWMP, Table 6-8, shown as groundwater and purchased water from UWCD
- 2025: the City's 2020 UWMP, Table 6-11, shown as City groundwater, UWCD groundwater, and recycled water pumpback allocation.
- 2030-2050: the City's 2025 UWMP, Table 6-11, shown as City groundwater, UWCD groundwater, and recycled water pumpback allocation.

3. Infeasibility of Accounting Supplies from the Delta Watershed for Metropolitan's Member Agencies and their Customers

Metropolitan's service area, as a whole, reduces reliance on the Delta through investments in non-Delta water supplies, local water supplies, and regional and local demand management measures. Consistent with Metropolitan's 2025 Urban Water Management Plan (UWMP), reduced reliance on supplies from the Delta watershed is evaluated at the regional level through changes in regional self-reliance and total reliance on Delta supplies. Metropolitan's member agencies coordinate reliance on the Delta through their membership in Metropolitan, a regional cooperative providing wholesale water service to its 26 member agencies. Accordingly, regional reliance on the Delta can only be measured regionally—not by individual Metropolitan member agencies and not by the customers of those member agencies.

Metropolitan's member agencies, and those agencies' customers, indirectly reduce reliance on the Delta through their collective efforts as a cooperative. Metropolitan's member agencies do not control the amount of Delta water they receive from Metropolitan. Metropolitan manages a statewide integrated conveyance system consisting of its participation in the State Water Project (SWP), its Colorado River Aqueduct (CRA) including Colorado River water resources, programs and water exchanges, and its regional storage portfolio. Along with the SWP, CRA, storage programs, and Metropolitan's conveyance and distribution facilities, demand management programs increase the future reliability of water resources for the region. In addition, demand management programs provide system-wide benefits by decreasing the demand for imported water, which helps to decrease the burden on the district's infrastructure and reduce system costs, and free up conveyance capacity to the benefit of all member agencies.

Metropolitan's costs are funded almost entirely from its service area, with the exception of grants and other assistance from government programs. Most of Metropolitan's revenues are collected directly from its member agencies. Properties within Metropolitan's service area pay a property tax that provided approximately 15 percent of the fiscal year 2024 annual budgeted revenues. The rest of Metropolitan's costs are funded through rates and charges paid by Metropolitan's member agencies for the wholesale services it provides to them.[1] Thus, Metropolitan's member agencies fund nearly all operations Metropolitan undertakes to reduce reliance on the Delta, including Colorado River Programs, storage facilities, Local Resources Programs and conservation programs within Metropolitan's service area.

Because of the integrated nature of Metropolitan's systems and operations, and the collective nature of Metropolitan's regional efforts, it is infeasible to quantify each of Metropolitan's member agencies' individual reliance on the Delta. It is infeasible to attempt to segregate an entity and a system that were designed to work as an integrated regional cooperative.

---

[1] A standby charge is collected from properties within the service areas of 22 of Metropolitan's 26 member agencies, ranging from $5 to $15 per acre annually, or per parcel if smaller than an acre. Standby charges go towards those member agencies' obligations to Metropolitan for the Readiness-to-Serve Charge. Standby charges represented approximately 2 percent of Metropolitan's total revenues in Fiscal Year 2025/26. *See Metropolitan Water District of Southern California, Water Standby Charge for Fiscal Year 2025/26, Board Materials (as presented May 13, 2025 and incorporated in subsequent budget materials, including November 2025 revision), and Metropolitan Water District of Southern California, Water Revenue Bonds Official Statement, Appendix A – "The Metropolitan Water District of Southern California."*

In addition to the member agencies funding Metropolitan's regional efforts, they also invest in their own local programs to reduce their reliance on any imported water. Moreover, the customers of those member agencies may also invest in their own local programs to reduce water demand. However, to the extent those efforts result in reduction of demands on Metropolitan, that reduction does not equate to a like reduction of reliance on the Delta. Demands on Metropolitan are not commensurate with demands on the Delta because most of Metropolitan's member agencies receive blended resources from Metropolitan as determined by Metropolitan—not the individual member agency—and for most member agencies, the blend varies from month-to-month and year-to-year due to hydrology, operational constraints, use of storage and other factors.

Colorado River Programs

As a regional cooperative of member agencies, Metropolitan invests in programs to ensure the continued reliability and sustainability of Colorado River supplies. Metropolitan was established to obtain an allotment of Colorado River water, and its first mission was to construct and operate the CRA. The CRA consists of five pumping plants, 450 miles of high voltage power lines, one electric substation, four regulating reservoirs, and 242 miles of aqueducts, siphons, canals, conduits and pipelines terminating at Lake Mathews in Riverside County. Metropolitan owns, operates, and manages the CRA. Metropolitan is responsible for operating, maintaining, rehabilitating, and repairing the CRA, and is responsible for obtaining and scheduling energy resources adequate to power pumps at the CRA's five pumping stations.

Colorado River supplies include Metropolitan's basic Colorado River apportionment, along with supplies that result from existing and committed programs, including supplies from the Imperial Irrigation District (IID)-Metropolitan Conservation Program, the implementation of the Quantification Settlement Agreement (QSA) and related agreements, and the exchange agreement with San Diego County Water Authority (SDCWA). The QSA established the baseline water use for each of the agreement parties and facilitates the transfer of water from agricultural agencies to urban uses. Since the QSA, additional programs have been implemented to increase Metropolitan's CRA supplies. These programs have continued to evolve in response to ongoing drought conditions in the Colorado River Basin and associated shortage and contingency actions. These include the PVID Land Management, Crop Rotation, and Water Supply Program, as well as the Lower Colorado River Water Supply Project. The 2007 Interim Guidelines provided for the coordinated operation of Lake Powell and Lake Mead, as well as the Intentionally Created Surplus (ICS) program that allows Metropolitan to store water in Lake Mead.

Storage Investments/Facilities

Surface and groundwater storage are critical elements of Southern California's water resources strategy and help Metropolitan reduce its reliance on the Delta. Because California experiences dramatic swings in weather and hydrology, storage is important to regulate those swings and mitigate possible supply shortages. Surface and groundwater storage provide a means of storing water during normal and wet years for later use during dry years, when imported supplies are limited. The Metropolitan system, for purposes of meeting demands during times of shortage, regulating system flows, and ensuring system reliability in the event of a system outage, provides over 1,000,000 acre-feet of system storage capacity. Diamond Valley Lake provides 810,000 acre-feet of that storage

capacity, effectively doubling Southern California's previous surface water storage capacity. Other existing imported water storage available to the region consists of Metropolitan's raw water reservoirs, a share of the SWP's raw water reservoirs in and near the service area, and the portion of the groundwater basins used for conjunctive-use storage.

Since the early twentieth century, DWR and Metropolitan have constructed surface water reservoirs to meet emergency, drought/seasonal, and regulatory water needs for Southern California. These reservoirs include Pyramid Lake, Castaic Lake, Elderberry Forebay, Silverwood Lake, Lake Perris, Lake Skinner, Lake Mathews, Live Oak Reservoir, Garvey Reservoir, Palos Verdes Reservoir, Orange County Reservoir, and Metropolitan's Diamond Valley Lake (DVL).

Metropolitan's Live Oak and Garvey Reservoirs serve exclusively as regulating facilities and have a combined capacity of approximately 4,100 AF. The remaining reservoirs are primarily used to meet emergency, drought, and seasonal demands, with a total gross storage capacity of 1,760,200 AF. However, not all of this capacity is available to Metropolitan; accounting for dead storage and volumes allocated to other entities, Metropolitan's effective storage capacity is approximately 1,665,200 AF. Conjunctive use of the aquifers offers another important source of dry year supplies. Unused storage in Southern California groundwater basins can be used to optimize imported water supplies, and the development of groundwater storage projects allows effective management and regulation of the region's major imported supplies from the Colorado River and SWP. Over the years, Metropolitan has implemented conjunctive use through various programs in the service area; Table 1 lists the groundwater conjunctive use programs active in the region.

Table 1: Contractual Conjunctive Groundwater Projects

Project and Project Proponents*	**Storage Capacity** (TAF)	**Dry-Year Yield** (TAF/Year)	**Storage Account Balance as of 1/1/2025** (TAF)

Total	**115.0**	**38.0**	**76.9**

* Metropolitan's active Conjunctive Use Programs as of July 1, 2025.

Metropolitan Demand Management Programs

Demand management costs are Metropolitan's expenditures for funding local water resource development programs and water conservation programs. These Demand Management Programs incentivize the development of local water supplies and the conservation of water to reduce the need to import water to deliver to Metropolitan's member agencies. These programs are implemented below the delivery points between Metropolitan's and its member agencies' distribution systems and, as such, do not add any water to Metropolitan's supplies. Rather, the effect of these downstream programs is to produce a local supply of water for the local agencies and to reduce demands by member agencies for water imported through Metropolitan's system. The following discussions outline how Metropolitan funds local resources and conservation programs for the benefit of all of its member agencies and the entire Metropolitan service area. Notably, the history of demand management by Metropolitan's member agencies and the local agencies that purchase water from Metropolitan's members has spanned more than four decades. The significant history of the programs is another reason it would be difficult to attempt to assign a portion of such funding to any one individual member agency.

Local Resources Programs

In 1982, Metropolitan began providing financial incentives to its member agencies to develop new local supplies to assist in meeting the region's water needs. Because of Metropolitan's regional distribution system, these programs benefit all member agencies regardless of project location because they help to increase regional water supply reliability, reduce demands for imported water supplies, decrease the burden on Metropolitan's infrastructure, reduce system costs, and free up conveyance capacity to the benefit of all the agencies that rely on water from Metropolitan.

For example, the Groundwater Replenishment System (GWRS) operated by the Orange County Water District is the world's largest water purification system for indirect potable reuse. It was funded, in part, by Metropolitan's member agencies through the Local Resources Program. Annually, the GWRS produces approximately 130,000 acre-feet of reliable, locally controlled, drought-proof supply of high-quality water to recharge the Orange County Groundwater Basin and protect it from seawater intrusion. The GWRS is a premier example of a regional project that significantly reduced the need to utilize imported water for groundwater replenishment in Metropolitan's service area, increasing regional and local supply reliability and reducing the region's reliance on imported supplies, including supplies from the State Water Project.

Metropolitan's local resource programs have evolved through the years to better assist Metropolitan's member agencies in increasing local supply production. The following is a description and history of the local supply incentive programs.

Local Projects Program

In 1982, Metropolitan initiated the Local Projects Program (LPP), which provided funding to member agencies to facilitate the development of recycled water projects. Under this approach, Metropolitan contributed a negotiated up-front funding amount to help finance project capital costs. Participating member agencies were obligated to reimburse Metropolitan over time. In 1986, the LPP was revised, changing the up-front funding approach to an incentive-based approach. Metropolitan contributed an amount equal to the avoided State Water Project pumping costs for each acre-foot of recycled water delivered to end-use consumers. This funding incentive was based on the premise that local projects

resulted in the reduction of water imported from the Delta and the associated pumping cost. The incentive amount varied from year to year depending on the actual variable power cost paid for State Water Project imports. In 1990, Metropolitan's Board increased the LPP contribution to a fixed rate of $154 per acre-foot, which was calculated based on Metropolitan's avoided capital and operational costs to convey, treat, and distribute water, and included considerations of reliability and service area demands.

Groundwater Recovery Program

The drought of the early 1990s sparked the need to develop additional local water resources, aside from recycled water, to meet regional demand and increase regional water supply reliability. In 1991, Metropolitan conducted the Brackish Groundwater Reclamation Study which determined that large amounts of degraded groundwater in the region were not being utilized. Subsequently, the Groundwater Recovery Program (GRP) was established to assist the recovery of otherwise unusable groundwater degraded by minerals and other contaminants, provide access to the storage assets of the degraded groundwater, and maintain the quality of groundwater resources by reducing the spread of degraded plumes.

Local Resources Program

In 1995, Metropolitan's Board adopted the Local Resources Program (LRP), which combined the LPP and GRP into one program. The Board allowed for existing LPP agreements with a fixed incentive rate to convert to the sliding scale up to $250 per acre-foot, similar to GRP incentive terms. Those agreements that were converted to LRP are known as "LRP Conversions."

Competitive Local Projects Program

In 1998, the Competitive Local Resources Program (Competitive Program) was established. The Competitive Program encouraged the development of recycled water and recovered groundwater through a process that emphasized cost-efficiency to Metropolitan, timing new production according to regional need while minimizing program administration cost. Under the Competitive Program, agencies requested an incentive rate up to $250 per acre-foot of production over 25 years under a Request for Proposals (RFP) for the development of up to 53,000 acre-feet per year of new water recycling and groundwater recovery projects. In 2003, a second RFP was issued for the development of an additional 65,000 acre-feet of new recycled water and recovered groundwater projects through the LRP.

Seawater Desalination Program

Metropolitan established the Seawater Desalination Program (SDP) in 2001 to provide financial incentives to member agencies for the development of seawater desalination projects. In 2014, seawater desalination projects became eligible for funding under the LRP, and the SDP was ended.

2007 Local Resources Program

In 2006, a task force comprised of member agency representatives was formed to identify and recommend program improvements to the LRP. As a result of the task force process, the 2007 LRP was established with a goal of 174,000 acre-feet per year of additional local water resource development. The new program allowed for an open application process and eliminated the previous competitive process. This program offered sliding scale incentives of up to $250 per acre-foot,

calculated annually based on a member agency's actual local resource project costs exceeding Metropolitan's prevailing water rate.

2014 Local Resources Program

A series of workgroup meetings with member agencies was held to identify the reasons why there was a lack of new LRP applications coming into the program. The main constraint identified by the member agencies was that the $250 per acre-foot was not providing enough of an incentive for developing new projects due to higher construction costs to meet water quality requirements and to develop the infrastructure to reach end-use consumers located further from treatment plants. As a result, in 2014, the Board authorized an increase in the maximum incentive amount, provided alternative payment structures, included onsite retrofit costs and reimbursable services as part of the LRP, and added eligibility for seawater desalination projects. The current LRP incentive payment options are structured as follows:

Option 1 – Sliding scale incentive up to $340/AF for a 25-year agreement term

Option 2 – Sliding scale incentive up to $475/AF for a 15-year agreement term

Option 3 – Fixed incentive up to $305/AF for a 25-year agreement term

On-site Retrofit Programs

In 2014, Metropolitan's Board also approved the On-site Retrofit Pilot Program which provided financial incentives to public or private entities toward the cost of small-scale improvements to their existing irrigation and industrial systems to allow connection to existing recycled water pipelines. The On-site Retrofit Pilot Program helped reduce recycled water retrofit costs to the end-use consumer which is a key constraint that limited recycled water LRP projects from reaching full production capacity. The program incentive was equal to the actual eligible costs of the on-site retrofit, or $975 per acre-foot of up-front cost, which equates to $195 per acre-foot for an estimated five years of water savings ($195/AF x 5 years) multiplied by the average annual water use in previous three years, whichever is less. The Pilot Program lasted two years and was successful in meeting its goal of accelerating the use of recycled water.

In 2016, Metropolitan's Board authorized a permanent On-site Retrofit Program (ORP). This program encompassed lessons learned from the Pilot Program and feedback from member agencies to make the program more streamlined and improve its efficiency. With an annual budget of $3 million, as of fiscal year 2024/25 the program has funded 550 sites, replacing 15,360 acre-feet of potable water with recycled water per year.

Stormwater Pilot Programs

In 2019, Metropolitan's Board authorized both the Stormwater for Direct Use Pilot Program and a Stormwater for Recharge Pilot Program to study the feasibility of reusing stormwater to help meet regional demands in Southern California. These pilot programs are intended to encourage the development, monitoring, and study of new and existing stormwater projects by providing financial incentives for their construction/retrofit and monitoring/reporting costs. These pilot programs will help evaluate the potential benefits delivered by stormwater capture projects and provide a basis for potential future funding approaches. Metropolitan's Board authorized a total of $12.5 million for the stormwater pilot programs ($5 million for the District Use Pilot and $7.5 million for the Recharge Pilot).

Current Status and Results of Metropolitan's Local Resource Programs

Today, nearly one-half of the total recycled water and groundwater recovery production in the region has been developed with an incentive from one or more of Metropolitan's local resource programs. During fiscal year 2025, Metropolitan provided about $5 million for production of 40,000 acre-feet of recycled water for non-potable and indirect potable uses. Metropolitan provided about $8 million to support projects that produced about 53,000 acre-feet of recovered groundwater for municipal use. Since 1982, Metropolitan has invested $771 million to fund 90 recycled water projects and 28 groundwater recovery projects that have produced a cumulative total of about 4.6 million acre-feet.

Conservation Programs

Metropolitan's regional conservation programs and approaches have a long history. Decades ago, Metropolitan recognized that demand management at the consumer level would be an important part of balancing regional supplies and demands. Water conservation efforts were seen as a way to reduce the need for imported supplies and offset the need to transport or store additional water into or within the Metropolitan service area. The actual conservation of water takes place at the retail consumer level. Regional conservation approaches have proven to be effective at reaching retail consumers throughout Metropolitan's service area and successfully implementing water saving devices, programs and practices. Through the pooling of funding by Metropolitan's member agencies, Metropolitan is able to engage in regional campaigns with wide-reaching impact. Regional investments in demand management programs, of which conservation is a key part along with local supply programs, benefit all member agencies regardless of project location. These programs help to increase regional water supply reliability, reduce demands for imported water supplies, decrease the burden on Metropolitan's infrastructure, reduce system costs, and free up conveyance capacity to the benefit of all member agencies.

Incentive-Based Conservation Programs

Conservation Credits Program

In 1988, Metropolitan's Board approved the Water Conservation Credits Program (Credits Program). The Credits Program is similar in concept to the Local Projects Program (LPP). The purpose of the Credits Program is to encourage local water agencies to implement effective water conservation projects through the use of financial incentives. The Credits Program provides financial assistance for water conservation projects that reduce demands on Metropolitan's imported water supplies and require Metropolitan's assistance to be financially feasible.

Initially, the Credits Program provided 50 percent of a member agency's program cost, up to a maximum of $75 per acre-foot of estimated water savings. The $75 Base Conservation Rate was established based Metropolitan's avoided cost of pumping SWP supplies. The Base Conservation Rate has been revisited by Metropolitan's Board and revised twice since 1988, from $75 to $154 per acre-foot in 1990 and from $154 to $195 per acre-foot in 2005.

Metropolitan's Credits Program investment in fiscal year 2025 was $22 million.

Member Agency Administered Program

Some member agencies also have unique programs within their service areas that provide local rebates that may differ from Metropolitan's regional program. Metropolitan continues to support these local efforts through a member agency administered funding program that adheres to the same funding guidelines as the Credits Program. The Member Agency Administered Program allows member agencies to receive funding for local conservation efforts that supplement, but do not duplicate, the rebates offered through Metropolitan's regional rebate program.

Water Savings Incentive Program

There are numerous commercial entities and industries within Metropolitan's service area that pursue unique savings opportunities that do not fall within the general rebate programs that Metropolitan provides. In 2012, Metropolitan designed the Water Savings Incentive Program (WSIP) to target these unique commercial and industrial projects. In addition to rebates for devices, under this program, Metropolitan provides financial incentives to businesses and industries that created their own custom water efficiency projects. Qualifying custom projects can receive funding for permanent water efficiency changes that result in reduced potable demand.

Non-Incentive Conservation Programs

In addition to its incentive-based conservation programs, Metropolitan also undertakes additional efforts throughout its service area that help achieve water savings without the use of rebates. Metropolitan's non-incentive conservation efforts include:

- residential and professional water efficient landscape training classes
- water audits for large landscapes
- research, development and studies of new water saving technologies
- advertising and outreach campaigns
- community outreach and education programs
- advocacy for legislation, codes, and standards that lead to increased water savings

Current Status and Results of Metropolitan's Conservation Programs

Since 1990, Metropolitan has invested $976 million in conservation rebates that have resulted in a cumulative savings of 4.32 million acre-feet of water as of fiscal year 2025. These investments include $414 million in turf removal which resulted in 175 million square feet of lawn turf removed. During fiscal year 2025, 1.12 million acre-feet of water is estimated to have been conserved. This annual total includes Metropolitan's Conservation Credits Program; code-based conservation achieved through Metropolitan-sponsored legislation; building plumbing codes and ordinances; reduced consumption resulting from changes in water pricing; and pre-1990 device retrofits.

Infeasibility of Accounting Regional Investments in Reduced Reliance Below the Regional Level

The accounting of regional investments that contribute to reduced reliance on supplies from the Delta watershed is straightforward to calculate and report at the regional aggregate level. However, any similar accounting is infeasible for the individual member agencies or their customers. As described

above, the region (through Metropolitan) makes significant investments in projects, programs and other resources that reduce reliance on the Delta. In fact, all of Metropolitan's investments in Colorado River supplies, groundwater and surface storage, local resources development and demand management measures that reduce reliance on the Delta are collectively funded by revenues generated from the member agencies through rates and charges.

Metropolitan's revenues cannot be matched to the demands or supply production history of an individual agency, or consistently across the agencies within the service area. Each project or program funded by the region has a different online date, useful life, incentive rate and structure, and production schedule. It is infeasible to account for all these things over the life of each project or program and provide a nexus to each member agency's contributions to Metropolitan's revenue stream over time. Accounting at the regional level allows for the incorporation of the local supplies and water use efficiency programs done by member agencies and their customers through both the regional programs and through their own specific local programs. As shown above, despite the infeasibility of accounting reduced Delta reliance below the regional level, Metropolitan's member agencies and their customers have together made substantial contributions to the region's reduced reliance.

4. Summary of Expected Outcomes for Reduced Reliance on the Delta

As stated in WR P1(c)(1)(C), the policy requires that UWMPs include expected outcomes for measurable reduction in Delta reliance and improved regional self- reliance. WR P1 further states that those outcomes shall be reported in the UWMP as the reduction in the amount of water used, or in the percentage of water used, from the Delta.

The expected outcomes for the City's Delta reliance and regional self-reliance were developed using the approach and guidance described in 2025 UWMP Guidebook Appendix C issued in January 2026.

Regional Self-Reliance

The data used to demonstrate increased regional self-reliance in this analysis represent the total regional efforts of the City and its customers and was developed in conjunction with Calleguas and Metropolitan as part of the UWMP coordination process.

The following provides a summary of the near-term (2030) and long-term (2050) expected outcomes for the City's regional self-reliance.

- Near-term (2030) – Normal water year regional self-reliance is expected to increase by almost 10,000 AFY from the 2010 baseline; this represents an increase of about 24 percent of 2030 normal water year retail demands (Table C-3).
- Long-term (2050) – Normal water year regional self-reliance is expected to increase by about 12,000 AFY from the 2010 baseline, this represents an increase of about 26 percent of 2050 normal water year retail demands (Table C-3).

The results show that the City is reducing reliance on the Delta and improving regional self-reliance.

Reduced Reliance on Supplies from the Delta Watershed

For reduced reliance on supplies from the Delta Watershed, the data used in this analysis represent the total regional efforts of Metropolitan, Calleguas, and their member agencies and customers (including the City), and were developed in conjunction with the City and other Metropolitan member agencies as part of the UWMP coordination process (as described in Section 5 of Metropolitan's 2025 UWMP). In accordance with UWMP requirements, Metropolitan's member agencies and their customers (many of them retail agencies) also report demands and supplies for their service areas in their respective UWMPs. The data reported by those agencies are not additive to the regional totals shown in Metropolitan's UWMP, rather their reporting represents subtotals of the regional total and should be considered as such for the purposes of determining reduced reliance on the Delta.

While the demands that Metropolitan's member agencies and their customers report in their UWMP's are a good reflection of the demands in their respective service areas, they do not adequately represent each water suppliers' individual contributions to reduced reliance on the Delta. To calculate and report their reliance on water supplies from the Delta watershed, water suppliers that receive water from the Delta through other regional or wholesale water suppliers would need to determine the amount of Delta water that they receive from the regional or wholesale supplier. Two specific pieces of information are needed to accomplish this, first is the quantity of demands on the regional or wholesale water supplier that accurately reflect a supplier's contributions to reduced reliance on the Delta and second is the quantity of a supplier's demands on the regional or wholesale water supplier that are met by supplies from the Delta watershed.

For water suppliers that make investments in regional projects or programs it may be infeasible to quantify their demands on the regional or wholesale water supplier in a way that accurately reflects their individual contributions to reduced reliance on the Delta. Due to the extensive, long-standing, and successful implementation of regional demand management and local resource incentive programs in Metropolitan's service area, this infeasibility holds true for Metropolitan's members as well as their

customers. For Metropolitan's service area, reduced reliance on supplies from the Delta watershed can only be accurately accounted for at the regional level.

The following provides a summary of the near-term (2030) and long-term (2050) expected outcomes for the reduced reliance on supplies from the Delta Watershed for Metropolitan:

- Near-term (2030) – Normal water year reliance on supplies from the Delta watershed decreased by 466,000 AF from the 2010 baseline, this represents a decrease of 6.5% of 2025 normal water year retail demands (Table C-4).
- Long-term (2050) – Normal water year reliance on supplies from the Delta watershed decreased by 537,000 AF from the 2010 baseline, this represents a decrease of just over 9.4% of 2045 normal water year retail demands (Table C-4).

The results show that as a region, Metropolitan and its members (including the City) as well as their customers are measurably reducing reliance on the Delta and improving regional self-reliance.

5. UWMP Implementation

In addition to the analysis and documentation described above, WR P1 subsection (c)(1)(B) requires that all programs and projects included in the UWMP that are locally cost-effective and technically feasible, which reduce reliance on the Delta, are identified, evaluated, and implemented consistent with the implementation schedule. WR P1 (c)(1)(B) states that:

> *(B) Identified, evaluated, and commenced implementation, consistent with the implementation schedule set forth in the Plan, of all programs and projects included in the Plan that are locally cost effective and technically feasible which reduce reliance on the Delta[.]*

In accordance with Water Code Section 10631(f), water suppliers must already include in their UWMP a detailed description of expected future projects and programs that they may implement to increase the amount of water supply available to them in normal and single-dry water years and for a period of drought lasting five consecutive years. The UWMP description must also identify specific projects, include a description of the increase in water supply that is expected to be available from each project, and include an estimate regarding the implementation timeline for each project or program.

Chapter 6 of the City's 2020 UWMP summarizes the implementation plan and continued progress in developing a diversified water portfolio to meet the region's water needs.

Table C-1: Optional Calculation of Water Use Efficiency

Service Area Water Use Efficiency Demands (Acre-Feet)	Baseline (2010)	2015	2020	2025	2030	2035	2040	2045	2050 (Optional)
Service Area Water Demands with Water Use Efficiency Accounted For	35,250	41,829	39,664	34,819	27,024	26,732	26,268	26,212	26,613

x	n/a	4.2	Section 4.2.5.4	10631.1(a)	Include projected water use needed for lower income housing projected in the service area of the Supplier.	System water use	4-3	Section 4.1
x	n/a	4.2	Section 4.2.5.3	10631(d)(4)(A)	In projected water use, include estimates of water savings from adopted codes, plans, and other policies or laws.	System water use	4-3	Section 4.1.4
x	n/a	4.2	Section 4.2.5.3	10631(d)(4)(B)	Provide citations of codes, standards, ordinances, or plans used to make water use projections.	System water use	4-3	Section 4.1.4
x	n/a	4.2	Section 4.2.5.3	10631(d)(4)(B)(ii)	To the extent that a Supplier reports the information described in subparagraph (A), an urban water Supplier shall… Indicate the extent that the water use projections consider savings from codes, standards, ordinances, or transportation and land use plans. Water use projections that do not account for these water savings shall be noted of that fact.	System water use	4-3	Section 4.1.4
x	x	4.2	Section 4.2.5.6	10635(b)	Demands under climate change considerations must be included as part of the drought risk assessment.	System water use	n/a	Section 4.2
n/a	x	5.1	Section 5.1	10608.36	Wholesale Suppliers shall include an assessment of present and proposed future measures, programs, and policies to help their Retail Suppliers achieve targeted water use reductions.	Baselines and targets	n/a	n/a
x	n/a	5.2	Section 5.2	10608.4	Retail Suppliers shall report on their compliance in meeting their water use targets. Reporting requirements will vary depending on whether the Supplier: - Was considered an urban retail water supplier in 2020, - Met its 2020 target in 2020, or - Was part of a merger or consolidation since 2020. Chapter 5 Subsections 5.2.1, 5.2.2, and 5.2.3 address each of these situations.	Baselines and targets	5-1	Section 5.1
x	x	6.1	Section 6.1	10631(b)(2)	When multiple sources of water supply are identified, describe the management of each supply in relationship to other identified supplies.	System supplies	n/a	Section 6.1
x	x	6.1	Sections 6.1 and 6.2	10631(b)(1)	Provide a discussion of anticipated supply availability under a normal, single dry year, and a drought lasting five years, as well as more frequent and severe periods of drought, including changes in supply due to climate change.	System supplies	n/a	Section 6.1
x	x	6.2	Section 6.2.2	10631(b)(4)(C)	Indicate whether groundwater is an existing or planned source of water available to the Supplier. If groundwater is identified as an existing or planned source of water… (include) a detailed description and analysis of the location, amount and sufficiency of groundwater pumped by the Supplier for the past five years.	Water supplies and recycled water	6-1	Section 6.2.2
x	x	6.2	Section 6.2.2	10631(b)(4)(A)	Indicate whether a groundwater sustainability plan or groundwater management plan has been adopted by the Supplier or if there is any other specific authorization for groundwater management. Include a copy of the plan or authorization.	System supplies	n/a	Section 6.2.2
x	x	6.2	Section 6.2.2	10631(b)(4)(B)	Describe the groundwater basin.	System supplies	n/a	Section 6.2.2
x	x	6.2	Section 6.2.2	10631(b)(4)(B)	Indicate if the basin has been adjudicated and include a copy of the court order or decree and a description of the amount of water the Supplier has the legal right to pump.	System supplies	n/a	n/a
x	x	6.2	Section 6.2.2	10631(b)(4)(B)	For unadjudicated basins… (include) information as to whether DWR has identified the basin as a high- or medium-priority basin in the most current official departmental bulletin…	Water supplies and recycled water	n/a	Section 6.2.2
x	x	6.2	Section 6.2.2	10631(b)(4)(B)	For unadjudicated basins… describe efforts by the Supplier to coordinate with sustainability or groundwater agencies to achieve sustainable groundwater conditions.	Water supplies and recycled water	n/a	Section 6.2.2
x	x	6.2	Section 6.2.2.	10631(b)(4)(C)	If groundwater is identified as an existing or planned source of water… (include) a detailed description and analysis of the location, amount and sufficiency of groundwater pumped by the Supplier for the past five years.	System supplies	n/a	Section 6.2.2
x	x	6.2	Section 6.2.2	10631(b)(4)(D)	Provide a detailed description and analysis of the amount and location of groundwater that is projected to be pumped.	System supplies	6-9	Section 6.2.2
x	x	6.1	Section 6.1	10631(b)	Identify and quantify the existing and planned sources of water available for 2025, 2030, 2035, 2040, 2045 and optionally 2050.	System supplies	6-8 and 6-9	Section 6.2.10

x	x	6.2	Section 6.2.7	10631(c)	Describe the opportunities for exchanges or transfers of water on a short-term or long-term basis.	System supplies	n/a	Section 6.2.9
x	n/a	6.2	Section 6.2.5	10633(a)	Describe the wastewater collection and treatment systems in the Supplier's service area with quantified amount of collection and treatment and the disposal methods.	System supplies (recycled water)	6-2	Section 6.2.7
x	x	6.2	Section 6.2.5	10633(b)	Describe the quantity of treated wastewater that meets recycled water standards, is being discharged, and is otherwise available for use in a recycled water project.	System supplies (recycled water)	6-3	Section 6.2.7
x	x	6.2	Section 6.2.5	10633(c)	Describe the recycled water currently being used in the Supplier's service area.	System supplies (recycled water)	6-4	Section 6.2.7
x	x	6.2	Section 6.2.5	10633(d)	Describe and quantify the potential uses of recycled water and provide a determination of the technical and economic feasibility of those uses.	System supplies (recycled water)	6-4	Section 6.2.7
x	x	6.2	Section 6.2.5	10633(e)	Describe the projected use of recycled water within the Supplier's service area at the end of 5, 10, 15, and 20 years, and describe the actual use of recycled water in comparison to uses previously projected.	System supplies (recycled water)	6-4 and 6-5	Section 6.2.7
x	x	6.2	Section 6.2.5	10633(f)	Describe the actions that may be taken to encourage the use of recycled water and the projected results of these actions in terms of acre-feet of recycled water used per year.	System supplies (recycled water)	6-6	Section 6.2.7
x	x	6.2	Section 6.2.5	10633(g)	Provide a plan for optimizing the use of recycled water in the Supplier's service area.	System supplies (recycled water)	n/a	Section 6.2.7
x	x	6.2	Section 6.2.6	10631(g)	Describe desalinated water project opportunities for long-term supply.	System supplies	6-7	Section 6.2.8
x	x	6.2	Section 6.2.10	10631(f)	Describe the expected future water supply projects and programs that may be undertaken by the water Supplier to address water supply reliability in average, single-dry, and for a period of drought lasting five consecutive water years.	System supplies	6-7	Section 6.2.10
x	x	6.3	Section 6.3 and Appendix O	10631.2(a)	The UWMP must include energy information, as stated in the code, that a Supplier can readily obtain.	System suppliers, energy intensity	O-1A, O-1B, O-1C, and O-2	Section 6.3
x		7.1	Section 7.1	10634	Provide information on the quality of existing sources of water available to the Supplier and the manner in which water quality affects water management strategies and supply reliability.	Water supply reliability assessment	n/a	Section 7.2
x	x	7.2	Section 7.2	10635(a)	Service Reliability Assessment: Assess the water supply reliability during normal, dry, and a drought lasting five consecutive water years by comparing the total water supply sources available to the Supplier with the total projected water use over the next 20 years.	Water supply reliability assessment	7-2, 7-3, and 7-4	Section 7.2
x	x	7.2	Section 7.2.3	10620(f)	Describe water management tools and options to maximize resources and minimize the need to import water from other regions.	Water supply reliability assessment	n/a	Section 7.2.4
x	x	7.3	Section 7.3	10635(b)	Provide a drought risk assessment as part of information considered in developing the demand management measures and water supply projects.	Water supply reliability assessment	n/a	Section 7.3
x	x	7.3	Section 7.3	10635(b)(1)	Include a description of the data, methodology, and basis for one or more supply shortage conditions that are necessary to conduct a drought risk assessment for a drought period that lasts five consecutive years.	Water supply reliability assessment	n/a	Section 7.3.1
x	x	7.3	Section 7.3	10635(b)(2)	Include a determination of the reliability of each source of supply under a variety of water shortage conditions.	Water supply reliability assessment	n/a	Section 7.2
x	x	7.3	Section 7.3	10635(b)(3)	Include a comparison of the total water supply sources available to the Supplier with the total projected water use for the drought period.	Water supply reliability assessment	7-5	Section 7.3.1
x	x	7.3	Section 7.3	10635(b)(4)	Include considerations of the historical drought hydrology, plausible changes on projected supplies and demands under climate change conditions, anticipated regulatory changes, and other locally applicable criteria.	Water supply reliability assessment	n/a	Section 7.2.1
x	x	8	Chapter 8	10632(a)	Provide a water shortage contingency plan (WSCP) with specified elements below.	Water shortage contingency planning	n/a	Appendix A
x	x	8	Chapter 8	10632(a)(1)	Provide an analysis of water supply reliability (from Guidebook Chapter 7) in the WSCP.	Water shortage contingency planning	n/a	Appendix A Section 1.1
x	x	8.2	Section 8.2	10632(a)(2)(A)	Provide the written decision-making process and other methods that the Supplier will use each year to determine its water reliability.	Water shortage contingency planning	n/a	Appendix A Section 1.2
x	x	8.2	Section 8.2	10632(a)(2)(B)	Provide data and methodology to evaluate the Supplier's water reliability for the current year and one dry year pursuant to factors in the code.	Water shortage contingency planning	n/a	Appendix A Section 1.2
x	x	8.3	Section 8.3	10632(a)(3)(A)	Define six standard water shortage levels of 10%, 20%, 30%, 40%, 50% shortage, and greater than 50% shortage. These levels shall be based on supply conditions, including percent reductions in supply, changes in groundwater levels, changes in surface elevation, or other conditions. The shortage levels shall also apply to a catastrophic interruption of supply.	Water shortage contingency planning	n/a	Appendix A Section 1.3
x	x	8.3	Section 8.3	10632(a)(3)(B)	Suppliers with an existing WSCP that uses different water shortage levels must cross reference their categories with the six standard categories.	Water shortage contingency planning	8-1	Appendix A Section 1.3
x	x	8.4	Section 8.4	10632(a)(4)(A)	Suppliers with WSCPs that align with the defined shortage levels must specify locally appropriate supply augmentation actions.	Water shortage contingency planning	8-2	Appendix A Section 1.4.2
x	x	8.4	Section 8.4	10632(a)(4)(B)	Specify locally appropriate demand reduction actions to adequately respond to shortages.	Water shortage contingency planning	8-3	Appendix A Section 1.4.1
x	x	8.4	Section 8.4	10632(a)(4)(C)	Specify locally appropriate operational changes.	Water shortage contingency planning	8-2	Appendix A Section 1.4.3
x	x	8.4	Section 8.4	10632(a)(4)(D)	Specify additional mandatory prohibitions against specific water use practices that are in addition to State-mandated prohibitions are appropriate to local conditions.	Water shortage contingency planning	Table 8-3	Appendix A Section 1.4.4
x	x	8.4	Section 8.4	10632(a)(4)(E)	Estimate the extent to which the gap between supplies and demand will be reduced by implementation of the action.	Water shortage contingency planning	8-2 and 8-3	Appendix A Section 1.4.1
x	x	8.4	Section 8.4.6	10632.5	The UWMP shall include a seismic risk assessment and mitigation plan.	Water shortage contingency plan	n/a	Appendix A Section 1.4.6
x	x	8.5	Section 8.5	10632(a)(5)(A)	Suppliers must describe that they will inform customers, the public and others regarding any current or predicted water shortages.	Water shortage contingency planning	n/a	Appendix A Section 1.5
x	x	8.5	Section 8.5	10632(a)(5)(B), 10632(a)(5)(C)	Suppliers must describe that they will inform customers, the public and others regarding any shortage response actions triggered or anticipated to be triggered and other relevant communications.	Water shortage contingency planning	n/a	Appendix A Section 1.5
x	n/a	8.6	Section 8.6	10632(a)(6)	Retail Supplier must describe how it will ensure compliance with and enforce provisions of the WSCP.	Water shortage contingency planning	n/a	Appendix A Section 1.6
x	x	8.7	Section 8.7	10632(a)(7)(A)	Describe the legal authority that empowers the Supplier to enforce shortage response actions.	Water shortage contingency planning	n/a	Appendix A Section 1.7
x	x	8.7	Section 8.7	10632(a)(7)(B)	Provide a statement that the Supplier will declare a water shortage emergency per Water Code Chapter 3. *Water Shortage Emergencies* .	Water shortage contingency planning	n/a	Appendix A Section 1.7
x	x	8.7	Section 8.7	10632(a)(7)(C)	Provide a statement that the Supplier will coordinate with any city or county within which it provides water for the possible proclamation of a local emergency.	Water shortage contingency planning	n/a	Appendix A Section 1.5
x	x	8.8	Section 8.8	10632(a)(8)(A)	Describe the potential revenue reductions and expense increases associated with activated shortage response actions.	Water shortage contingency planning	n/a	Appendix A Section 1.8
x	x	8.8	Section 8.8	10632(a)(8)(B)	Provide a description of mitigation actions needed to address revenue reductions and expense increases associated with activated shortage response actions.	Water shortage contingency planning	n/a	Appendix A Section 1.8
x	n/a	8.8	Section 8.8	10632(a)(8)(C)	Retail Suppliers must describe the cost of compliance with Water Code Chapter 3.3, *Excessive Residential Water Use During Drought* .	Water shortage contingency planning	n/a	Appendix A Section 1.8

x	n/a	8.9	Section 8.9	10632(a)(9)	Retail Suppliers must describe the monitoring and reporting requirements and procedures that ensure appropriate data are collected, tracked, and analyzed for purposes of monitoring customer compliance.	Water shortage contingency planning	n/a	Appendix A Section 1.9
x	x	8.10	Section 8.10	10632(a)(10)	Describe reevaluation and improvement procedures for monitoring and evaluation the WSCP to ensure risk tolerance is adequate and appropriate water shortage mitigation strategies are implemented.	Water shortage contingency planning	n/a	Appendix A Section 1.9
x	n/a	8.11	Section 8.11	10632(b)	Analyze and define water features that are artificially supplied with water, including ponds, lakes, waterfalls, and fountains, separately from swimming pools and spas.	Water shortage contingency planning	n/a	Appendix A Section 1.11
x	x	8.12	Section 8.12	10632(c)	Make available the WSCP to customers and any city or county where it provides water within 30 days after adoption of the plan.	Water shortage contingency planning	n/a	Appendix A Section 1.12
x	n/a	9.1	Sections 9.1	10631(e)(1)	Retail Suppliers shall provide a description of the nature and extent of each demand management measure implemented over the past five years. The description will address specific measures listed in code.	Demand management measures	n/a	Section 9.2
n/a	x	9.2	Sections 9.2	10631(e)(2)	Wholesale Suppliers shall describe specific demand management measures listed in code, their distribution system asset management program, and Supplier assistance program.	Demand management measures	n/a	Section 9.2
x	n/a	10	Chapter 10	10608.26(a)	Retail Suppliers shall conduct a public hearing to discuss adoption, implementation, and economic impact of water use targets (recommended to discuss compliance).	Plan adoption, submittal, and implementation	n/a	Section 10.1
x	x	10.2	Section 10.2.1	10621(b)	Notify, at least 60 days prior to the public hearing, any city or county within which the Supplier provides water that the Supplier will be reviewing the UWMP and considering amendments or changes to the plan.	Plan adoption, submittal, and implementation	10-1	Section 10.1
x	x	10.4	Section 10.4	10621(f)	Each urban water Supplier shall update and submit its 2025 plan to DWR by July 1, 202 6.	Plan adoption, submittal, and implementation	n/a	Section 10.1
x	x	10.2	Sections 10.2.2, 10.3, and 10.5	10642	Provide supporting documentation that the Supplier made the UWMP and WSCP available for public inspection, published notice of the public hearing, and held a public hearing about the UWMP and WSCP.	Plan adoption, submittal, and implementation	n/a	Appendix E
x	x	10.2	Section 10.2.2	10642	The Supplier is to provide the time and place of the hearing to any city or county within which the Supplier provides water.	Plan adoption, submittal, and implementation	10-1	Section 10.1, Appendix E
x	x	10.3	Section 10.3.2	10642	Provide supporting documentation that the UWMP and WSCP has been adopted as prepared or modified.	Plan adoption, submittal, and implementation	n/a	Appendix F
x	x	10.4	Section 10.4	10644(a)	Provide supporting documentation that the Supplier has submitted their UWMP to the California State Library.	Plan adoption, submittal, and implementation	n/a	Section 10.1
x	x	10.4	Section 10.4	10644(a)(1)	Provide supporting documentation that the Supplier has submitted their UWMP to any city or county within which the Supplier provides water no later than 30 days after adoption.	Plan adoption, submittal, and implementation	n/a	Section 10.1, Appendix D
x	x	10.4	Sections 10.4.1 and 10.4.2	10644(a)(2)	The UWMP, or amendments to the UWMP, submitted to DWR shall be submitted electronically.	Plan adoption, submittal, and implementation	n/a	Section 10.1
x	x	10.7	Section 10.7.2	10644(b)	If revised, submit a copy of the WSCP to DWR within 30 days of adoption.	Plan adoption, submittal, and implementation	n/a	Section 10.1
x	x	10.5	Section 10.5	10645(a)	Provide supporting documentation that, not later than 30 days after filing a copy of its UWMP with DWR, the Supplier has or will make the plan available for public review during normal business hours.	Plan adoption, submittal, and implementation	n/a	Section 10.1
x	x	10.5	Section 10.5	10645(b)	Provide supporting documentation that, not later than 30 days after filing a copy of its WSCP with DWR, the Supplier has or will make the plan available for public review during normal business hours.	Plan adoption, submittal, and implementation	n/a	Appendix A Section 1.12
x	x	10.6	Section 10.6	10621(c)	If Supplier is regulated by the Public Utilities Commission, include its plan and contingency plan as part of its general rate case filings.	Plan adoption, submittal, and implementation	n/a	Section 10.1

CITY OF OXNARD – NOTICE OF PREPARATION OF THE 2025 URBAN WATER MANAGEMENT PLAN AND SHORTAGE CONTINGENCY PLAN

1 message

Maldonado, Abraham <abraham.maldonado@oxnard.org> Wed, Apr 1, 2026 at 9:38 AM
To: john.demers@ventura.org
Cc: Chris Peyton <chris.peyton@oxnard.org>

Dear Mr. Demers,

The City of Oxnard is in the process of preparing and updating its 2025 Urban Water Management Plan (UWMP) and Water Shortage Contingency Plan (WSCP) in compliance with the Urban Water Management Planning Act. An update of the City of Oxnard's UWMP is required every five (5) years.

Water Code section 10621(b) requires an urban water supplier updating its UWMP and WSCP to notify cities and counties within its service area of the update at least sixty (60) days prior to holding a public hearing, thereby encouraging public involvement and agency coordination. This letter serves as the City of Oxnard's notice that it is preparing and updating its 2025 UWMP and WSCP.

A draft of the UWMP and WSCP will be made available prior to the public hearing at:
www.oxnard.gov/UWMP

The City of Oxnard anticipates holding a public hearing for adoption as follows:

Date: June 1, 2026
Time: 5:30 PM
Location: City of Oxnard Council Chambers, 305 West Third Street, Oxnard, CA 93030

The City invites your agency to coordinate and provide input during the preparation of these plans. If you have any questions or would like to provide input, please contact Abraham Maldonado by email at abraham.maldonado@oxnard.org or by phone at (805) 200-5375.

Thank you,

Chris Peyton
Division Manager
City of Oxnard

Dear Ms. McCaffrey,

The City of Oxnard is in the process of preparing and updating its 2025 Urban Water Management Plan (UWMP) and Water Shortage Contingency Plan (WSCP) in compliance with the Urban Water Management Planning Act. An update of the City of Oxnard's UWMP is required every five (5) years.

Water Code section 10621(b) requires an urban water supplier updating its UWMP and WSCP to notify cities and counties within its service area of the update at least sixty (60) days prior to holding a public hearing, thereby encouraging public involvement and agency coordination. This letter serves as the City of Oxnard's notice that it is preparing and updating its 2025 UWMP and WSCP.

A draft of the UWMP and WSCP will be made available prior to the public hearing at:
www.oxnard.gov/UWMP

The City of Oxnard anticipates holding a public hearing for adoption as follows:

Date: June 1, 2026
Time: 5:30 PM
Location: City of Oxnard Council Chambers, 305 West Third Street, Oxnard, CA 93030

The City invites your agency to coordinate and provide input during the preparation of these plans. If you have any questions or would like to provide input, please contact Abraham Maldonado by email at abraham.maldonado@oxnard.org or by phone at (805) 200-5375.

Thank you,

Chris Peyton

Total		22,805	25,969		0		125		22,680		0		0	

DWR NOTES:

Units of measure (AF, CCF, MG) must remain consistent throughout the UWMP as reported in Submittal Table 2-3. This table identifies the unit of measure selected in Submittal Table 2-3.

NOTES:

Submittal Table 6-4 Retail: Recycled Water Direct Beneficial Uses Within Service Area
Water Code Section 10633 (c)(e)

☐ Check box if recycled water is not used and is not planned for use within the service area of the supplier. The supplier will only complete the column on "Potential Recycled Water Use" and submit an accompanying narrative on the feasibility of that potential recycled water use.

Name(s) of Facility/ies Producing (Treating) the Recycled Water (OPTIONAL) :	
Name of Supplier Operating the Recycled Water Distribution System (OPTIONAL) :	
Supplemental Water Added in 2025 (volume) Include units (OPTIONAL) :	
Source of 2025 Supplemental Water (OPTIONAL) :	

Use Type **Drop down list**	Water Type (after treatment if treated) (OPTIONAL) **Drop down list**	Additional Information (as needed)	2025	2030	2035	2040	2045	2050 (opt)	**Potential Recycled Water Use**	
									Volume	Narrative page number (OPTIONAL)
Agricultural Irrigation			0	0	0	0	0	0		
Groundwater Recharge (IPR)		ASR Recovered	0	3,000	6,400	6,400	6,400	6,400	10,200	Table 6-8
Groundwater Recharge (IPR)		Recycled Water Pumpback Allocation	0	200	250	1,250	1,250	1,250		
		Total	0	0	0	0	0	0	10,200	

DWR NOTES: Units of measure (AF, CCF, MG) must remain consistent throughout the UWMP as reported in Submittal Table 2-3. This table identifies the unit of measure selected in Submittal Table

NOTES:The City currently delivers recycled water to agricultural customers outside of the water service area, so 0 AFY is shown for agricultural irrigation. The City intends to increase deliveries of recycled water for which it receives a Recycled Water Pumpback Allocation, which is shown here to reflect that recycled water was delivered but is quantified as potable supply in Report Table 6 11.

10633. The plan shall provide, to the extent available, information on recycled water and its potential for use as a water source in the service area of the urban water supplier... and shall include...
(c) A description of the recycled water currently being used in the supplier's service area, including, but not limited to, the type, place, and quantity of use
(e) The projected use of recycled water within the supplier's service area at the end of 5, 10, 15, and 20 years, and a description of the actual use of recycled water in comparison to uses previously projected pursuant to this subdivision.

Submittal Table 6-5 Retail: 2020 UWMP Recycled Water Use Projection Compared to 2025 Actual
Water Code Section 10633 (e)

☐ Check the box if recycled water was not used in 2025 nor previously projected for use in 2020. Proceed to the next table.

Use Type	2020 Projection for 2025	2025 Actual Use
Insert additional rows as needed using the types found in this list		
Agricultural irrigation	3,875	0
Landscape irrigation (exc golf courses)		
Golf course irrigation		
Commercial use		
Industrial reuse	780	0
Geothermal and other energy production		
Seawater intrusion barrier		
Recreational impoundment		
Wetlands or wildlife habitat		
Groundwater recharge (IPR)	1,345	0
Reservoir water augmentation (IPR)		
Direct potable reuse		
Other (Description Required)		
Total	6,000	0

DWR NOTES:
Units of measure (AF, CCF, MG) must remain consistent throughout the UWMP as reported in Submittal Table 2-3. This table identifies the unit of measure reported in Submittal Table 2-3

NOTES:

10633. The plan shall provide, to the extent available, information on recycled water and its potential for use as a water source in the serv`ice area of the urban water supplier. The preparation of the plan shall be coordinated with local water, wastewater, groundwater, and planning agencies that operate within the supplier's service area, and shall include all of the following: (e) ...a description of the actual use of recycled water in comparison to uses previously projected pursuant to this subdivision

Submittal Table 6-6 Retail: Methods to Encourage Future Recycled Water Use			
☐	Check the box if the Supplier does not plan to expand recycled water use in the future. Supplier will not complete the table below but will provide narrative explanation.		
	Provide page location of narrative in the UWMP		
Name of Action	Description	Planned Implementation Year	Expected Increase in Recycled AF
Indirect Potable Reuse	Aquifer Storage Recovery (ASR) Injection Well #1	2027	3,200
Indirect Potable Reuse	AWPF Improvements/Upgrade	2029	TBD
Indirect Potable Reuse	AWPF Expansion	2031	7,000
Indirect Potable Reuse	AWPF Recycled Water Storage Construction	TBD	TBD
Indirect Potable Reuse	ASR Injection Well Field	2031	TBD
		Total	10,200
		Unit Conversion to AF	
DWR NOTES: **Units of measure** (AF, CCF, MG) MUST remain consistent with units reported in Submittal Table 2-3. The units reported in Submittal Table 2-3 are used in this table's			
NOTES:			

10633. The plan shall provide, to the extent available, information on recycled water and its potential for use as a water source in the serv`ice area of the urban water supplier. The preparation of the plan shall be coordinated with local water, wastewater, groundwater, and planning agencies that operate within the supplier's service area, and shall include all of the following: (f) a description of actions, including financial incentives, which may be taken to encourage the use of recycled water, and the projected results of these actions in terms of acre feet of recycled water used per year.

Submittal Table 6-7 Retail: Expected Future Water Supply Projects or Programs							
☐	Check the box if there are no expected future water supply projects or programs that provide a quantifiable increase to the agency's water supply. Procees to the next table.						
☐	Check the box if some or all of the supplier's future water supply projects or programs are not compatible with this table and are described in a narrative format.						
	Provide page location of narrative in the UWMP						
Name of Future Projects or Programs	Joint Project with other suppliers?		Additional Description (as needed)	Water Type (after treatment if treated) (OPTIONAL) **Drop Down list**	Planned Implementation Year	Planned for Use in Year Type **Drop Down List**	Expected Increase in Water Supply to Supplier (This may be a AF

Add additional rows as needed					
All	Expand Public Information Campaign				Yes
All	Reduce System Water Loss				Yes
All	Other - Customers must repair leaks, breaks, and malfunctions in a timely manner		5,196	EPA Cases in Water Conservation: How Efficiency Programs Help Water Utilities Save Water and Avoid Costs (United States Environmental Protection Agency, Office of Water, 2002)	Yes
All	Other water feature or swimming pool restriction			Draining of pools or refilling shall be done only for health and safety reasons.	Yes
All	CII - Restaurants may only serve water upon request		12	Southwest Florida Water Management (Southwest Florida Water Management District, 2018)	Yes
All	CII - Lodging establishment must offer opt out of linen service				Yes
All	CII - Commercial kitchens required to use pre-rinse spray valves		1,824	EPA WaterSense, Saving Water in Restaurants (United States Environmental Protection Agency, 2012)	Yes
All	Pools and Spas - Require covers for pools and spas		26	Arlington, Virginia, Water & Utilities. (Arlington County Government, n.d.).	Yes
All	Landscape - Other landscape restriction or prohibition			Free flowing hoses are prohibited; automatic shut-off hoses are required.	Yes
All	Landscape - Restrict or prohibit runoff from landscape irrigation				Yes
All	Landscape - Limit landscape irrigation to specific times		301	Texas Living Waters (Texas Living Waters Project, 2018)	Yes
All	Landscape - Limit landscape irrigation to specific days		840	CalWep WSCP Toolkit 2021; City of Sacramento and City of Clovis; AWE Use and Effectiveness of Municipal Irrigation Restrictions During Drought Study Report, January 2020. (California Water Efficiency Partnership, 2021)	Yes
All	Landscape - Limit landscape irrigation to specific days			Irrigation of parks, school ground areas, and road median landscaping will not be permitted more than twice a week and only if necessary.	
All	Landscape - Prohibit certain types of landscape irrigation			Irrigation of ornamental turf on public medians with potable water prohibited.	Yes
All	Landscape - Other landscape restriction or prohibition			Limits on watering duration. Watering or irrigation of lawns, landscape or other vegetated area with potable water using a landscape irrigation system or a watering device that is not continuously attended is limited to no more than 15 minutes per day per station. This does not apply to landscape irrigation systems that exclusively use high efficiency irrigation equipment, very low-flow drip type irrigation systems when no emitter produces more than two gallons of water per hour, and weather based controllers or high-efficiency stream rotor sprinklers.	
All	Landscape - Restrict or prohibit runoff from landscape irrigation			Irrigation of newly constructed home and building exteriors with potable water is prohibited unless drip or microspray systems are used.	Yes
All	Landscape - Other landscape restriction or prohibition			Golf course water use shall be limited. Limitation on the irrigation of roughs shall be implemented before limitations on fairway irrigation. Efficient use of recycled water on any golf course shall not be limited.	
All	Landscape - Other landscape restriction or prohibition			Application of potable water to landscapes during and within 48 hours after measurable rainfall is prohibited.	Yes
All	Other - Require automatic shut of hoses		8	Maryland Department of the Environment (Maryland Department of the Environment, n.d.)	Yes
All	Other - Prohibit use of potable water for construction and dust control		2,361	Maryland Department of the Environment (Maryland Department of the Environment, n.d.)	Yes
All	Other			The City may not issue new construction meters or short-term water use unless reclaimed or non-potable water is used, unless potable water is necessary to protect the health, safety, or welfare.	Yes
All	Other - Prohibit use of potable water for washing hard surfaces			No water use to clean surfaces. The use of running water from a hose, pipe, or faucet to clean buildings, pavement, tile, wood, plastic, driveways, parking lots, and other paved surfaces is prohibited, except for public health and safety reasons and then only with a hose and automatic shut-off nozzle.	Yes
All	Decrease Line Flushing		143	CalWep WSCP Toolkit 2021; City of Clovis (California Water Efficiency Partnership, 2021)	Yes
All	Implement or Modify Drought Rate Structure or Surcharge				Yes
All	Other		4,936	All types of rebates; EPA Cases in Water Conservation: How Efficiency Programs Help Water Utilities Save Water and Avoid Costs; Evaluating the Effectiveness of a Water Conservation Campaign: Combining Experimental and Field Methods (United States Environmental Protection Agency, Office of Water, 2002)	Yes
2 & Up	Other			Reduce indoor and outdoor water use by specified percentage as determined (based on Shortage Stage). Contact the City Water Division or visit OxnardWater.org for additional tips and techniques to reduce water use.	
2 & Up	Other			The use of water from fire hydrants shall be limited to fire fighting and related activities and other uses of water for municipal purposes shall be limited to activities necessary to maintain the public health, safety, and welfare.	
2 & Up	Other			Commercial car wash and laundry systems. Installation of new or replacement non re-circulating water systems in commercial conveyor car wash or commercial laundry systems is prohibited.	
2 & Up	Other			The manager shall grant prior approval for water to be used on a one-time or short-term basis for construction and dust control. The user shall submit to the manager its water use plan at least 30 days in advance of the proposed use.	
3 & Up	Other			Commercial/industrial cooling systems. Installation of new or replacement single pass cooling systems in commercial or industrial buildings is prohibited.	Yes
3 & Up	Water Features - Restrict water use for decorative water features, such as fountains				Yes
3 & Up	Water Features - Restrict water use for decorative water features, such as fountains			Where and when available, approved non-potable water shall be used to fill or refill recreational or ornamental lakes, ponds, or fountains. When using non-potable water, the user shall post signs in conspicuous areas identifying the fact that non-potable water is being used. Newly installed or replacement ponds and fountains shall include recirculation pump(s) that maximize the efficiency and reuse of fill water.	
3 & Up	Other water feature or swimming pool restriction			Watering to maintain the level of water in swimming pools shall occur only when essential.	
4 & Up	Other - Prohibit vehicle washing except at facilities using recycled or recirculating water				
4 & Up	Landscape - Other landscape restriction or prohibition			Depending on the drought severity, the use of potable water for irrigation uses may be restricted or prohibited. The manager shall have the right to shut off water service to any such irrigation service upon seven days advance notice to the customer.	Yes
4 & Up	Other			Issuance of building permits which require new or expanded water service may be limited or withheld, except to protect the public's health, safety and welfare, or in cases which meet the City Council adopted conservation and offset requirements.	Yes

DWR NOTES: Units of measure (AF, CCF, MG) must remain consistent throughout the UWMP as reported in Submittal Table 2-3.

County Name **Drop Down List**	60 Day Notice **Drop Down (yes/no)**	Notice of Public Hearing **Drop Down (yes/no)**
Add additional rows as needed		
Ventura County	Yes	
NOTES: The City also notified Channel Islands Beach CSD, Naval Base Ventura County, Calleguas Municipal Water District, and United Water Conservation District.		

CWC 10621 (b)Notify at least 60 days prior to the public hearing any city or county within which the supplier provides water that the urban water supplier will be reviewing the plan and considering amendments or changes to the plan.

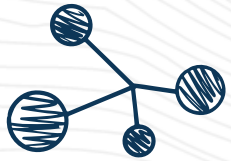
CWC 10642 The water supplier is to provide the time and place of the hearing to any city or county within which the supplier provides water.

Urban Water Management Plan

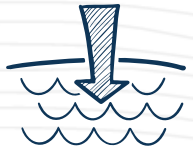
May 26, 2026

CITY OF OXNARD CALIFORNIA

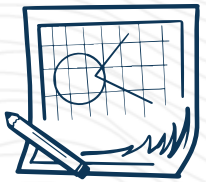
WSC



Agenda

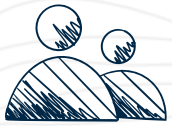


Background



Elements

Water Use



Water Supply

Water Reliability

Demand Management Measures

Water Shortage Contingency Plan

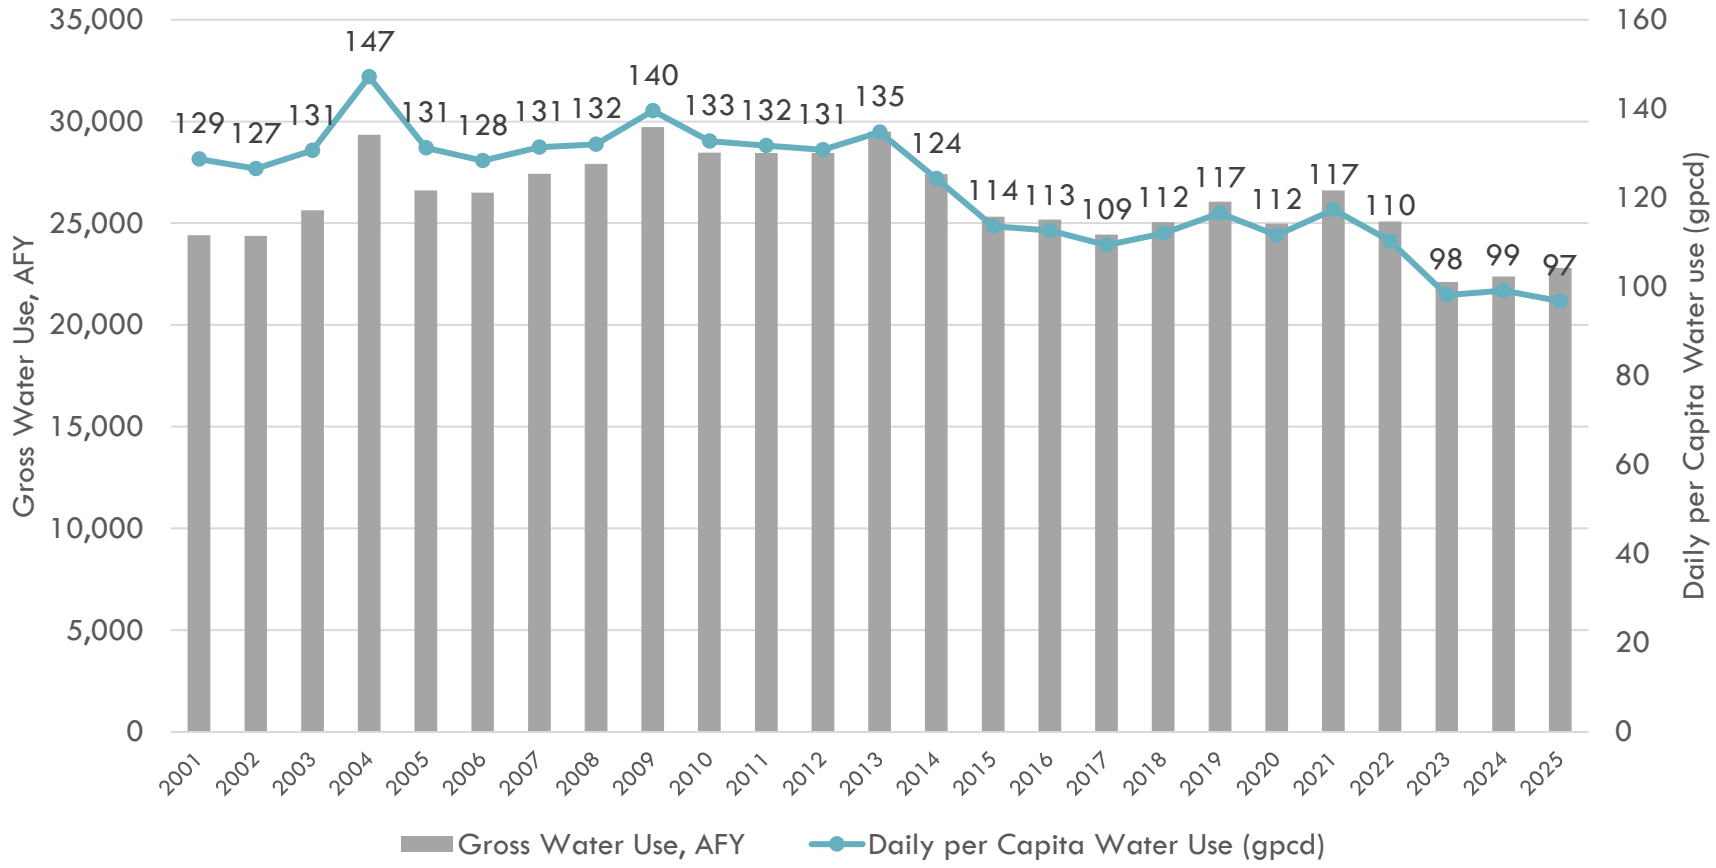
Conclusion

About Urban Water Management Plans (UWMPs)

- Required by the California Water Code
- Must be updated every 5 years and submitted to DWR
- Supports long-term water supply and drought planning
- Coordinated with land use
- Ensure supplies meet existing and projected demands over a minimum 20-year horizon through 2045, or optionally 2050
- Provides framework for conservation and drought response
- Pre-requisite for certain loans and grants

Background- Communication and Outreach

- UWMP Act requires coordination with other local agencies. The City notified development of the UWMP and coordinated, when possible, with the following agencies:
  - Calleguas Municipal Water District
  - United Water Conservation District
  - Port Hueneme Water Agency
  - County of Ventura
  - Metropolitan Water District of Southern California
  - Cities of Camarillo, Ventura, Port Hueneme
  - Fox Canyon Groundwater Management Agency
  - Channel Islands Beach Community Services District
  - Naval Base Ventura County

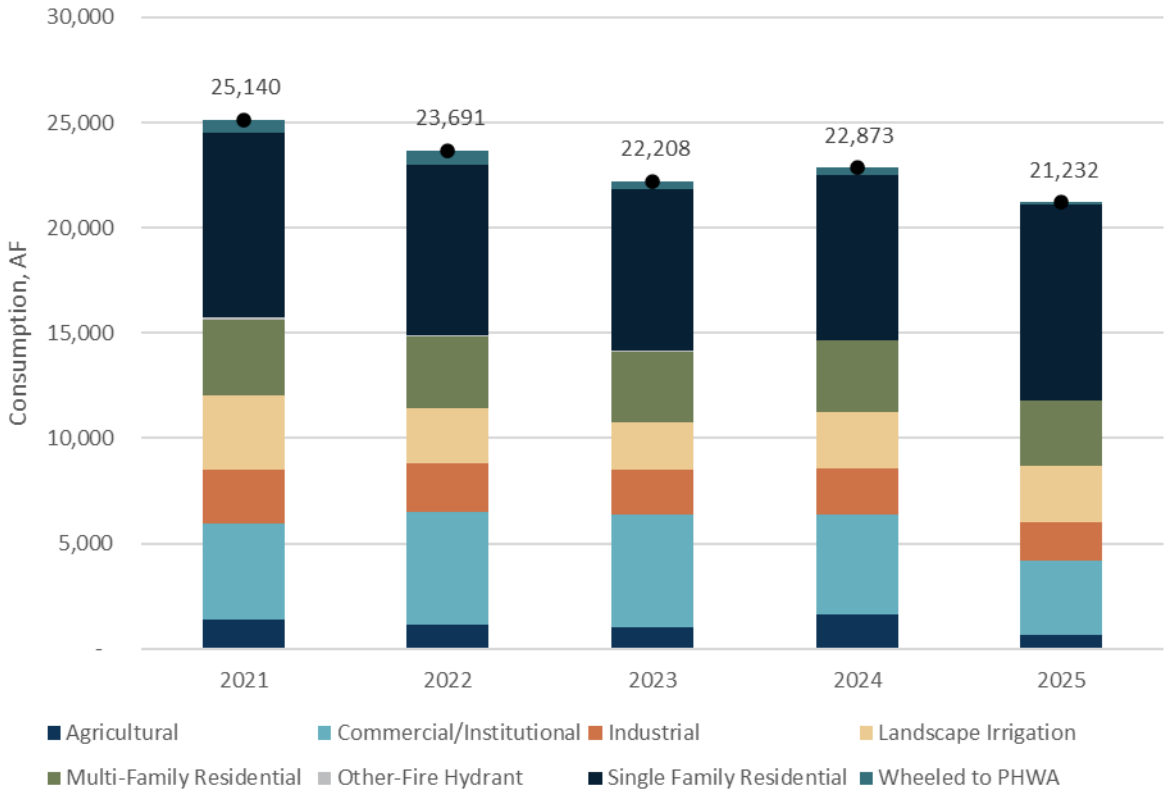


Background- Communication and Outreach

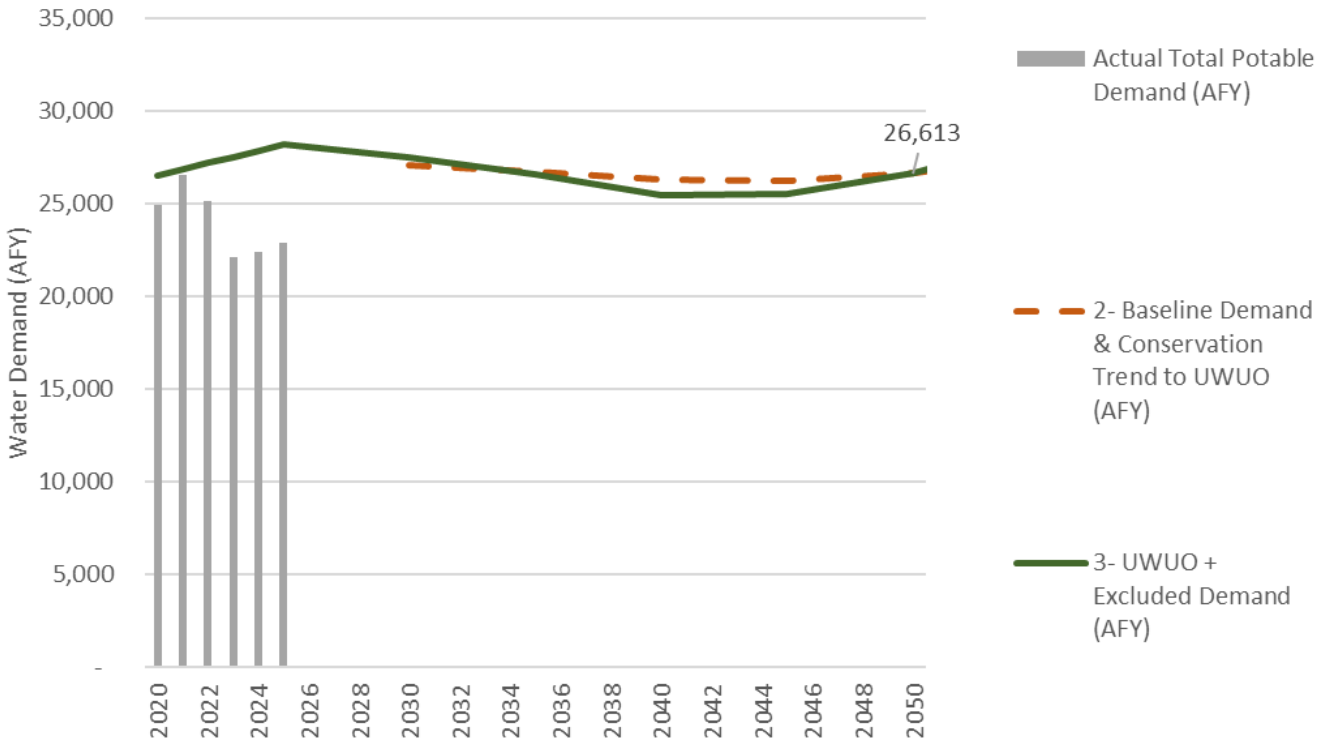
- Consistent with the UWMP Act, the City will publish public hearing notices in a local newspaper for the June 16th City Council Meeting
- Access to the UWMP and Water Shortage contingency Plan (WSCP) will be available at https://www.oxnard.org/city-department/public-works/water/uwmp/

UWMP Elements

Introduction and Lay Description	Water Supply Characterization
Plan Preparation	Water Service Reliability and Drought Risk Assessment
System Description	Water Shortage Contingency Plan
Water Use Characterization	Demand Management Measures
Senate Bill x7-7 Baselines, Targets and 2025 Compliance	Plan Adoption, Submittal, and Implementation

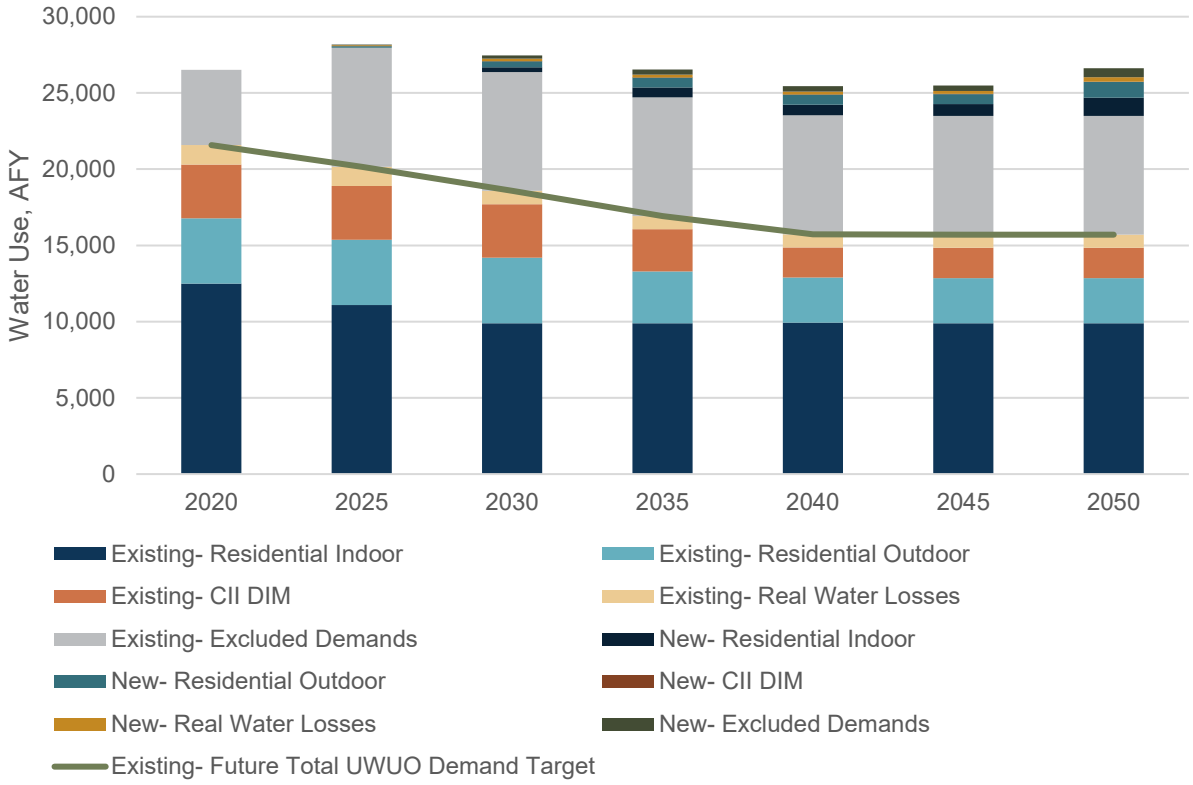


Water Use Characterization & SBx7-7 Compliance



2020 Target:
140 gallons per capita per day (gpcd)

City Achieved Target in 2020 and 2025?
YES



Water Use Characterization

Water Use Characterization

- *Considered* "Making Conservation a California Way of Life" Regulation Urban Water Use Objectives (UWUO)
  - UWUO = Residential Indoor Water Use Budget + Residential Outdoor Water Use Budget + Commercial, Industrial, and Institutional (CII) Dedicated Irrigation Meters (DIM) Outdoor Water Use Budget + Real Water Loss Budget
- *Considered* historic baseline demand per connection per customer type & SCAG growth
- *Used* baseline demands reduced at a constant rate to meet UWUO by 2050 (see chart on previous slide)
- High-level demand methodology to plan for sufficient supply to meet the population/housing growth from SCAG forecast, which incorporated City General Plan & City input
  - Does not project development-specific demand using demand per dwelling unit or per acre factors by land use type.

Water Supply

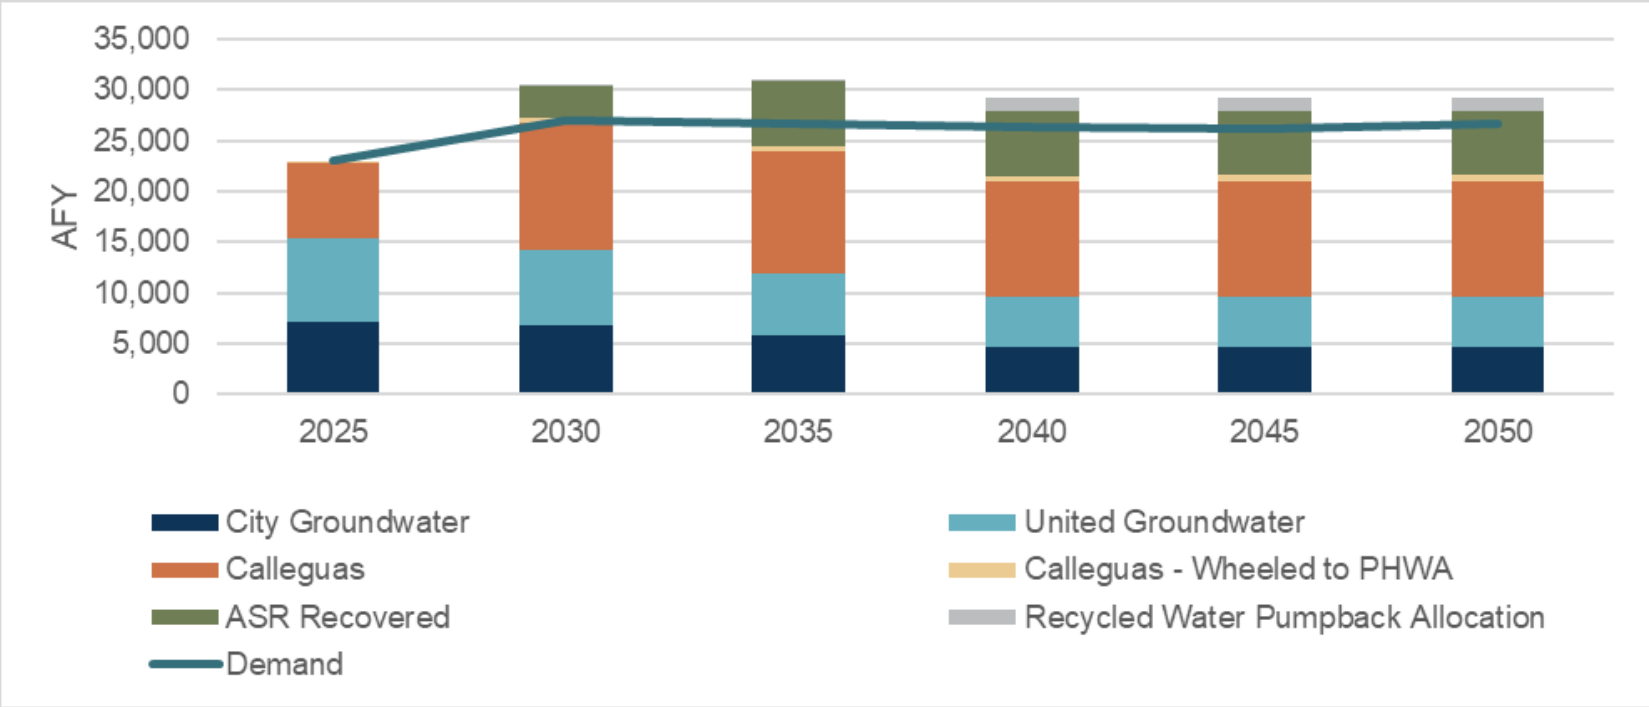
Local Groundwater

- City extracts from the Oxnard Plain Groundwater Basin
- United Water Conservation District (United) extracts groundwater for the City further inland

Imported Water

- State Water Project (SWP) water through Calleguas Municipal Water District (Calleguas) & Metropolitan Water District

Recycled Water



- Produced at the Advanced Water Purification Facility (AWPF)
- Used for agricultural irrigation, future groundwater recharge and indirect potable reuse

Water Supply

		PROJECTED WATER SUPPLY, AFY

Water Shortage Contingency Plan (WSCP) Elements

Water Supply Reliability Analysis	Legal Authority
Annual Water Supply and Demand Assessment Procedures	Financial Consequences of WSCP Implementation
Six Standard Shortage Stages	Monitoring and Reporting
Shortage Response Actions	WSCP Refinement Procedures
Communication Protocols	Special Water Features Distinctions
Compliance and Enforcement	Plan Adoption, Submittal, and Availability

Water Shortage Contingency Plan (WSCP)

- Provides flexible guidelines for the City Council, staff, and the public for identifying anticipated water shortages and response actions to allow for efficient management of any water shortage
- Oxnard Stages Translated to State's Six standard stages:

CITY OF OXNARD SHORTAGE LEVEL	PERCENT REDUCTION GOAL
1	≤15%
2	15 - 25%
3	25 - 35%
4	>35%

STANDARD WSCP LEVEL	PERCENT SHORTAGE LEVEL
1	10%
2	20%
3	30%
4	40%
5	50%
6	>50%

- WSCP is considered a standalone document and can be amended separately from the UWMP, if needed.

2025 UWMP Conclusions

- Expanding local water supplies, improving drought resilience, and reducing dependence on imported water
- Supply is expected to meet current and projected demands through 2050 with continued water use efficiency and increased recycled water recharge for indirect potable reuse
- Achieved 2020 SBx7-7 compliance in 2025 & the City is positioned to comply with State-mandated Urban Water Use Objective by 2040
- The UWMP is anticipated to meet all DWR requirements

CITY OF OXNARD CALIFORNIA

CITY COUNCIL AGENDA REPORT

PUBLIC HEARINGS
AGENDA ITEM NO. M.2

DATE: June 16, 2026

TO: City Council

FROM: Michael Wolfe, Public Works Director, (805) 385-8055, michael.wolfe@oxnard.org

SUBJECT: Fiscal Year (FY) 2026-27 Resolution to Levy Assessments in the Waterways Maintenance District.

RECOMMENDATION

That the City Council, acting as the legislative body for the Waterways Maintenance District:

1. Hold a public hearing regarding proposed assessments for the Waterways Maintenance District for Fiscal Year 2026-27;
2. Adopt a resolution to levy the maintenance assessment on property within the Waterways Maintenance District for Fiscal Year 2026-27; and
3. Authorize the Approval of Agreement A-8620, entered into by and between the City of Oxnard and the Harbour Island Homeowners Association, accepting the donation of $10,000 from the Harbour Island Homeowners Association (HOA) to support landscape maintenance and on-call services within the Waterways Maintenance District Zone 2.

(Finance and Governance Committee approved 2-1 on May 26, 2026.)

Please click the following link to view the required Measure M pre-recorded presentation video: https://youtu.be/TEOgcMSTv6Q

BACKGROUND

Special Districts is a Division of the Public Works Department and manages a total of 50 special financing districts, including the Waterways Maintenance District (the "District"). On June 16, 1970, the City formed the District pursuant to the maintenance district provisions of the Improvement Act of 1911 (Streets and Highways Code Section 5820 et seq.). The District was formed at the request of the owner (developer) of the property included within the District to finance the capital costs and maintenance and operation expenses for the sidewalks, streets, waterways, flood control, drainage systems, vector control, landscaping, parking areas, and fences.

DISCUSSION

Each year, prior to levying the assessment on the property tax rolls, the City Council is required to review the estimated costs of maintaining and operating the improvements within the District, to decide whether the costs of such maintenance and operations shall be borne wholly or partially by the District. Only after conducting a Public Hearing to receive public input, can the City Council consider making a decision to levy the assessments in an amount sufficient to raise the money to pay for such costs within the District. As this district was levied at its maximum rate in FY 2025-26, the assessment is not proposed to change for FY 2026-27. The proposed assessments for Fiscal Year 2026-27 (FY 2026-27) are identified below:

Waterways Maintenance District	FY 2026-27		Qualified Elector Approved Annual Adjustment	Projected Assessment Revenue[1]
	Maximum Rate	Applied Rate		
Zone 1 (Mandalay Bay)	$444,258.00	$444,258.00	N/A	$444,258.00
Zone 2 (Harbour Island)	$47,949.00	$47,949.00	N/A	$47,949.00
[1] Subject to change depending on Ventura County's final assessment roll				

The deadline to deliver the assessment information to Ventura County for inclusion on the FY 2026-27 property tax roll is July 6, 2026.

WAD Zone 2 (Harbour Island) Donation Agreement

Special Districts staff has met with the Harbour Island HOA on multiple occasions to address the recurring budget shortfalls in Waterways Maintenance District Zone 2, which continue to be impacted by Proposition 218's cap on annual assessments. The HOA has provided financial contributions on several occasions in recent years to help maintain service levels in the absence of additional assessment revenue. In FY 2020-21, the HOA donated $4,853 to WAD Zone 2 to fund water quality remediation efforts in the channel. The HOA also donated $15,446 in FY 2023-24, and $17,400 in FY 2025-26 to WAD Zone 2 to fully fund contracted landscape services in Harbour Island for the year, as well as additional maintenance needs, including irrigation repairs, plant material replacement, and mulching.

During FY 2026-27 budget discussions, the HOA indicated that rather than consider a Proposition 218 ballot proceeding, they would elect to proceed with a donation to the district to fund maintenance expenses. For FY 2026-27, the HOA has agreed to provide a $10,000 donation, which brings total projected revenues for Zone 2 to $57,949 and will be reflected in the City's proposed budget for Zone 2.

STRATEGIC PRIORITIES

This agenda item is a routine operational item or does not relate to the five strategic priorities adopted by City Council on March 16, 2021.

FINANCIAL IMPACT

Property owners pay the assessments as a part of their annual property tax bill. The assessment, including inflationary adjustments where applicable, has been approved by the property owners through prior proceedings. Funds received for the benefit of the District are restricted and can only be used to fund the services of the District. There is no impact to the General Fund. The District's projected maintenance costs for FY 2026-27 are outlined below:

Projected FY 2026-27 Expenses		
Waterways Zone 1 (Mandalay Bay)	$ 479,207.00	
Waterways Zone 2 (Harbour Island)	$ 76,256.00	
	Total	$ 555,463.00
Projected FY 2026-27 Assessment Revenues[1]		
Zone 1 (Mandalay Bay)	$ 444,258.00	
Zone 2 (Harbour Island)	$ 47,949.00	
	Total	$ 492,207.00
	Projected Assessment Revenue vs Expenses[2]	($63,256)

[1] allocated based on parcel count; allocated based on % split of costs at time of District formation
[2] Expenses that exceed revenues are funded by other sources such as Zone fund balance, donations, or interest income

All expenses above projected FY 2026-27 revenues are proposed to be funded via available fund balance.

COMMITTEE OUTCOME

The Finance and Governance Committee approved 2-1 on May 26, 2026 to approve the staff recommendation and to forward the item for Council approval.

CITY COUNCIL OF THE CITY OF OXNARD

RESOLUTION NO.

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD LEVYING MAINTENANCE ASSESSMENTS FOR FISCAL YEAR 2026-27 ON REAL PROPERTY IN THE WATERWAYS MAINTENANCE DISTRICT

WHEREAS, by Resolution No. 5144, adopted June 16, 1970, the City Council formed the Waterways Maintenance District ("District") pursuant to Chapter 26 of Part 3 of the Improvement Act of 1911 (Streets and Highways Code Section 5820 et seq.); and

WHEREAS, in 1971, 1987, and 1993, the City Council annexed territory to the District; and

WHEREAS, as required by Streets and Highways Code Section 5830, the City Council annually fixes the rate of the maintenance assessment levied in connection with the District; and

WHEREAS, the City Council desires to fix the rate for the maintenance assessment for Fiscal Year 2026-27 at the same rate as it was levied in Fiscal Year 2025-26; and

WHEREAS, the City Council desires that the maintenance assessments for Fiscal Year 2026-27 be levied and collected on the Ventura County property tax bill.

NOW, THEREFORE, the City Council of the City of Oxnard resolves:

1. The budget for Fiscal Year 2026-27 for the Waterways Maintenance District is hereby approved as follows:

Landscape and Waterways Maintenance	$389,500
Direct Staff Charges	$113,598
Overhead	$47,346
Consulting	$3,605
County Collection Fee	$1,414
	$555,463

2. The costs outlined in Section 1 up to the maximum permissible assessment amount of $492,207 shall be borne by the District; the remainder shall be borne by the Improvement Fund of the District or other funds made available to the District.

3. The rate of the maintenance assessment necessary to raise $492,207 for the fiscal year beginning July 1, 2026 is hereby fixed as set forth in the Assessment Roll attached hereto as Exhibit A and said maintenance assessment is hereby levied.

4. The City Council directs that staff take such actions as are necessary to cause the assessment to be collected on the property tax bill by the County of Ventura.

5. The City Clerk is instructed to cause this resolution to be published one time in a newspaper of general circulation within the City within 15 days after adoption.

6. In accordance with Government Code Section 53901, the City Clerk is instructed to file with the Ventura County Auditor within 60 days from July 1, 2026, a certified copy of this resolution.

PASSED AND ADOPTED THIS ___ day of June 2026, by the following vote:

CITY OF OXNARD
DONATION AGREEMENT

THIS DONATION AGREEMENT ("Agreement") is entered into in Ventura County, California, on June 16, 2026. This Agreement is entered by and between the City of Oxnard ("City") and Harbour Island Homeowners Association ("Donor"), for good and valuable consideration, subject to the following terms and conditions:

SECTION 1. DONATION

Donor is (check and complete all that apply):

- Donating $10,000 in a lump sum.
- Donating $_____ in _____ (monthly, quarterly, etc.) payments of $_____ in _____ installments.
- Donating the following (describe equipment):
- Donor prefers the City use the Donation for the following limited purpose(s): **The donation by Harbour Island Homeowners Association is to be specifically used for landscape maintenance and improvements within the Harbour Island linear park.**

SECTION 2. BEHESTED DONATION

- If this box is checked this donation is being made at the behest of CouncilMember/Commissioner/City Staff Member _____.

If the Donation is being made at the behest of an elected official, the City shall notify the elected official that the elected official may be required to submit a Form 803 Behested Payment Report to the Fair Political Practices Commission.

SECTION 3. ADDITIONAL CONDITIONS

The City's acceptance of the Donation is subject to the conditions specified as follows:

1. Pursuant to California Government Code Section 37354, the City acknowledges that the Donation shall be used for a public purpose as described in **Section 1**.

2. The City shall provide Donor with a donation receipt indicating the amount of the donation or estimated value of goods or services donated within 30 days of receiving the Donation.

3. The City will make best efforts to use the Donation for the purpose(s) specified in Section 1. If it is impractical for the City to use the Donation for the purposes specified in Section 1, the City may use the Donation in any

manner at its sole discretion and Donor has no right or obligation to control City's use of the donation.

4. Donor has not and will not receive any goods or services in exchange for the Donation and the City will not grant any extra consideration to the Donor in relation to City procurement, regulatory matters, or any other business, services, or operations of the City.

5. No Warranties. Donor(s), including its officers, employees, and agents, make no representations whatsoever, extend no warranties of any kind, either express or implied, including but not limited to the implied warranties of merchantability or fitness for a particular purpose, and assumes no responsibilities whatsoever with respect to design, development, manufacture, or use of the Donated Equipment.

SECTION 4. COORDINATION

In connection with administering this agreement, Donor and City shall work through the following primary representatives:

Fiscal Year (FY) 2026-27 Resolution to Levy Assessments in the Waterways Maintenance District

Finance and Governance Committee
May 26, 2026

City Council
June 16, 2026

Anthony Miller
Special Districts Manager

CITY OF OXNARD CALIFORNIA

RECOMMENDATION

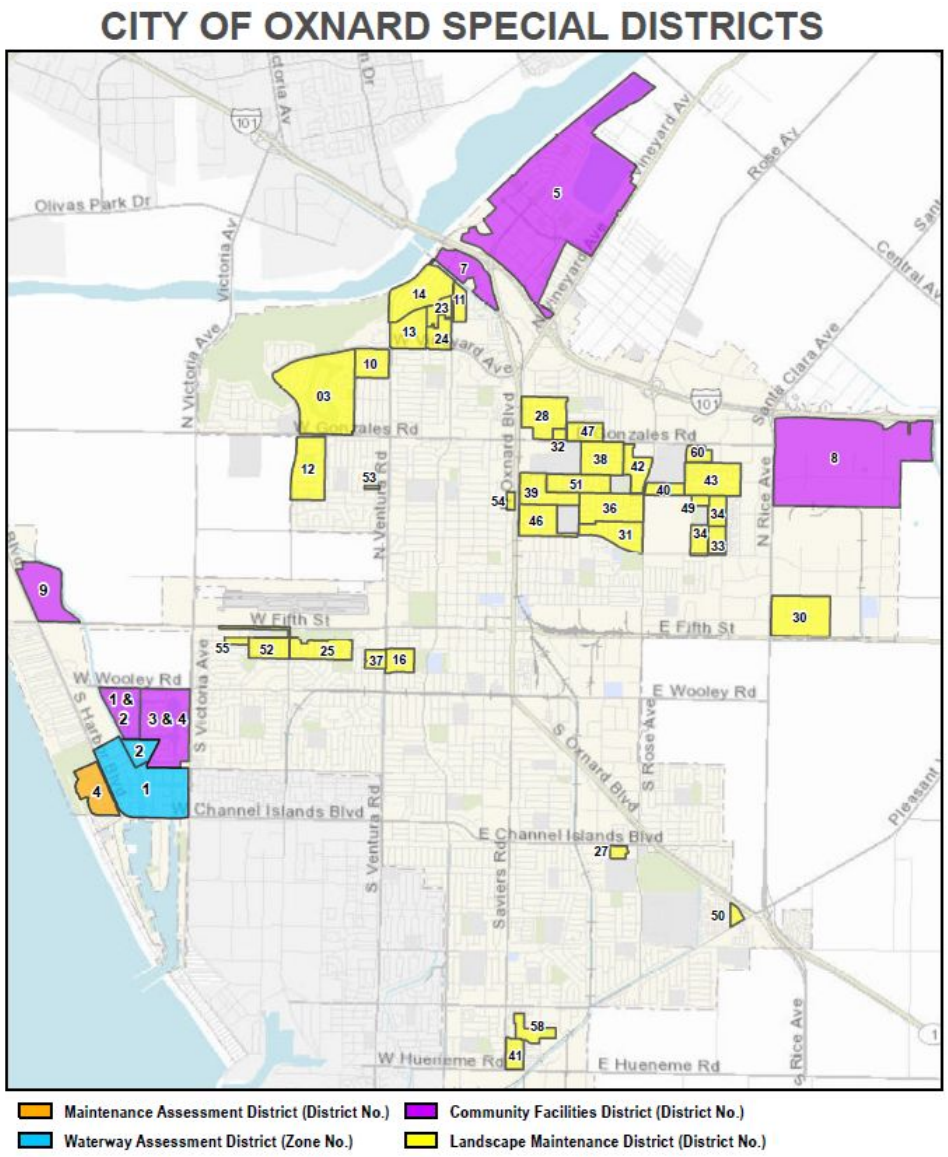
That the Finance and Governance Committee recommend that the City Council, acting as the legislative body for the Waterways Maintenance District:

1. Hold a public hearing regarding proposed assessments for the Waterways Maintenance District for Fiscal Year 2026-27;
2. Adopt a resolution to levy the maintenance assessment on property within the Waterways Maintenance District for Fiscal Year 2026-27; and
3. Authorize the Approval of Agreement A-8620, entered into by and between the City of Oxnard and the Harbour Island Homeowners Association, accepting the donation of $10,000 from the Harbour Island Homeowners Association (HOA) to support landscape maintenance and on-call services within the Waterways Maintenance District Zone 2.

RECOMMENDATION

That the City Council, acting as the legislative body for the Waterways Maintenance District:

1. Hold a public hearing regarding proposed assessments for the Waterways Maintenance District for Fiscal Year 2026-27;
2. Adopt a resolution to levy the maintenance assessment on property within the Waterways Maintenance District for Fiscal Year 2026-27; and
3. Authorize the Approval of Agreement A-8620, entered into by and between the City of Oxnard and the Harbour Island Homeowners Association, accepting the donation of $10,000 from the Harbour Island Homeowners Association (HOA) to support landscape maintenance and on-call services within the Waterways Maintenance District Zone 2.



BACKGROUND

- Special Districts is a Division of the Public Works Department and manages 50 special financing districts, which includes one Waterways Maintenance District.

- On June 16, 1970, the City formed the District pursuant to the Improvement Act of 1911.

- The District was formed at the request of the developer of the property included within the District to finance the capital costs and maintenance and operation expenses for the sidewalks, streets, water, flood control, drainage systems, vector control, landscaping, and parking areas and fences.

MAP OF SPECIAL DISTRICTS IN THE CITY OF OXNARD

More information can be found at: oxnard.gov/public-works/special-districts

Location Map

DISCUSSION

- Each year, prior to levying the assessment on the property tax rolls, the City Council is required to review the estimated costs of maintaining and operating the improvements within the District, to decide whether the costs of such maintenance and operations shall be borne wholly or partially by the District.

- Only after conducting a Public Hearing to receive public input, can the Council consider making a decision to levy the assessments in an amount sufficient to raise the money to pay for such costs within the District.

DISCUSSION

Proposed assessment rates for FY 2026-27 are identified below:

Waterways Maintenance District	FY 2026-27		Qualified Elector Approved Annual Adjustment	Projected Assessment Revenue
	Maximum Rate	Applied Rate		
Zone 1 (Mandalay Bay)	$444,258.00	$444,258.00	N/A	$444,258.00
Zone 2 (Harbour Island)	$47,949.00	$47,949.00	N/A	$47,949.00

DISCUSSION

- As this district was levied a maximum assessment in fiscal year 2025-26 and does not have an approved annual adjustment, rates are not expected to change for fiscal 2026-27.

- The deadline to deliver the assessment information to Ventura County for inclusion on the FY 2026-27 property tax roll is July 6, 2026.

DISCUSSION

WAD Zone 2 (Harbour Island) Donation Agreement

- Waterways Maintenance District Zone 2 is significantly impacted by Proposition 218's cap on annual assessments and is experiencing severe budget shortfalls.

- The Harbour Island HOA has provided financial contributions on several occasions in recent years to help maintain service levels in the absence of additional assessment revenue.

DISCUSSION

- To address specific service requests and generally maintain service levels, the HOA has previously donated:
  - $4,853 - FY 2020-21
  - $15,446 - FY 2023-24
  - $17,400 - FY 2025-26

- During FY 2026-27 budget discussions, the HOA indicated that rather than consider a Proposition 218 ballot proceeding, they were electing to proceed with donations to the district to fund maintenance expenses.

DISCUSSION

- For FY 2026-27, the HOA has agreed to provide a $10,000 donation, which brings total projected revenues for Zone 2 to $57,949.

- All expenses above projected FY 2026-27 revenues are proposed to be funded via available fund balance.

FINANCIAL IMPACT

- Property owners pay the assessments as a part of their annual property tax bill. The assessment has been approved by the property owners through prior proceedings. Funds received for the benefit of the District are restricted and can only be used to fund the services of the District.

- There is no impact to the General Fund.

FINANCIAL IMPACT

The District's projected maintenance costs for FY 2026-27 are outlined below:

Projected FY 2026-27 Expenses			
	Waterways Zone 1 (Mandalay Bay	$479,207	
	Waterways Zone 2 (Harbour Island)	$76,256	
		Total	**$555,463**
Projected FY 2026-27 Assessment Revenues[1]			
	Zone 1 (Mandalay Bay	$444,258.00	
	Zone 2 (Harbour Island)	$47,949.00	
		Total	**$492,207**
	Projected Assessment Revenue vs Expenses[2]		**($63,256)**

[1] Allocated based on parcel count; allocated based on % split of costs at time of District formation
[2] Expenses that exceed revenues are funded by other sources such as Zone fund balance, donations, or interest income

CITY COUNCIL AGENDA REPORT

PUBLIC HEARINGS
AGENDA ITEM NO. M.3

DATE: June 16, 2026

TO: City Council

FROM: Michael Wolfe, Public Works Director, (805) 385-8055, michael.wolfe@oxnard.org

SUBJECT: Adoption of Resolution Confirming FY 2026-27 Landscape Maintenance Districts Diagrams and Assessments.

RECOMMENDATION

That City Council, acting as the legislative body for the City's Landscape Maintenance Districts (LMDs):

1. Hold a public hearing to receive public testimony regarding the proposed Fiscal Year 2026-27 assessments in the City's LMDs; and
2. Adopt "A Resolution of the City Council of the City of Oxnard, California, Confirming Diagrams and Assessments for Fiscal Year 2026-27 in Connection with the City's Landscape Maintenance Districts."

(This item did not originate in Committee.)
Please click the following link to view the required Measure M pre-recorded presentation video: https://youtu.be/bHMi_1D_SBM

BACKGROUND

Special Districts is a Division of the Public Works Department and manages a total of 50 special financing districts, which include 36 Landscape Maintenance Districts ("LMDs"). Through the process of developing property, special financing districts (e.g. LMDs) were authorized to be used by property owners (i.e., developers) to fund the annual cost of maintaining certain public improvements that have a special benefit to the properties within the district. Typically, the developer installed the public improvements at the time of development and the benefiting property owners pay for the cost of maintaining the improvements (i.e., special benefit) through a special assessment included on the property's annual property tax bill. Revenue received from the assessment funds the cost to provide the Special Benefit, as outlined in the Consolidated Engineer's Report attached hereto as Attachment 5 ("Report").

Assessments are levied annually and collected on the property tax roll. Each year, the City Council conducts proceedings before making a decision to levy the assessments. Revenue received from the assessments partially funds the ongoing maintenance of the public improvements that are provided by each district and, in some cases, is collected for future work that is conducted on a less-than-annual basis.

In order to levy assessments in connection with the LMD's, each year, the City Council must adopt a number of resolutions that, among other things, approves an Engineer's Report ("Report") that describes the levy for the year and calls a public hearing on the assessment. Then, the City Council must hold the public hearing.

Following the hearing, the City Council approves a resolution that confirms the diagrams and assessment and causes the assessment to be levied and collected on the property tax roll. The City Council cannot set the rate for the assessment in an LMD above the maximum rate approved by the property owners, as adjusted by a property-owner-approved inflation adjustment formula.

DISCUSSION

On June 1, 2026, the City Council adopted resolutions to initiate the annual proceedings for the FY 2026-27 real property assessment levy and approved the Report. The Report includes a description of the improvements within each district, the proposed service levels, the estimated annual expenses for each district, funding to be collected for improvement projects for each district, the method of assessment apportionment for each lot or parcel within each district's boundaries, and diagrams showing the parcels within each district. After the City Council adopted the resolutions, a notice for the public hearing on the levy assessments was published in a newspaper of general circulation at least 10 days prior to the public hearing.

In compliance with the Act, an annual review and evaluation of each district's revenues and expenditures, contained in the Report, is conducted. This Report consolidates the City's 36 LMDs into a single report but evaluates each district individually. The Report includes a description of the improvements, the projected estimated annual maintenance costs, and funding to be collected for projects done on a less-than-annual basis, if any, the method of assessment apportionment for each lot or parcel within each district's boundaries, and a diagram showing the parcels within that district. The Report also provides an analysis of each district's annual financial status. It separates and apportions the cost of General Benefit, as defined in the Report, other costs funded by a non-assessment fund (e.g., the General Fund), and the cost of Special Benefit to the benefiting properties, which is funded by the applied assessment rate. The actual services provided to each district varies from district to district and are based upon the property owner-approved services and funding.

The applied assessment rate is the amount needed to fund the services of each district and is the amount actually levied on the property tax roll. It cannot exceed the maximum assessment rate that was approved by the property owners, through prior proceedings, for each district. After completing an individual analysis of each district's current level of service, anticipated estimated expenditures, fund balance, assigned reserve levels, and future work that is conducted on a less than annual basis, it is recommended to set the applied rates as set forth in the Report. Parcel specific detail of the proposed maximum and applied assessment is included in the Report as attached, is available from the City Clerk's office, and is accessible from the City's website (www.oxnard.org).

Costs considered to be of General Benefit are not allowed to be assessed to the properties and therefore are apportioned as a non-assessment fund (e.g. General Fund) expense. In addition to the required General Benefit contribution, the General Fund is proposed to cover additional costs, which are outlined in the Fiscal Impact section of this Report. The proposed FY 2026-27 Operating Budget includes funds necessary to cover these costs.

Funds received for the benefit of each district are restricted and can only be used within the district and for the purposes for which they were collected. Some of the district's applied assessment rates are proposed to increase from last year, while others are proposed to decrease. This is to account for changes in the expected amounts of services, such as, but not limited to landscape maintenance, sidewalk maintenance, removal and replacement of displaced sidewalks, irrigation repair, electrical systems repair, and lighting repair and replacement. Both increases and decreases can be attributed to changes in annual service costs to maintain fund balances after their use in prior fiscal years, consistent with the Act, to meet a district's obligation for staff and overhead expenses, or to maintain sufficient reserve levels consistent with the City Council approved Maintenance and Funding Policy for Landscape Maintenance Districts. The assessment is levied at a rate that is no higher than the maximum assessment rate approved by property owners. All of the previous items are normal operating considerations of LMDs and are evaluated as a part of this process. However, there are two districts, LMDs 25 and 53, that are receiving further attention in FY 2026-27 due to their projected end-of-year fund balances:

LMD 25

LMD 25 (The Pointe) is located within the Sea Air neighborhood and generally consists of property along and north of New Haven Place, east of S. Patterson Road, south of W. Fifth Street, and west of Saratoga Street. It comprises 216 benefit units and is projected to have an estimated negative fund balance of $426 at the end of FY 2026-27. With a maximum total levy amount of $23,799, the district is unable to entirely fund its projected annual expenses of $39,142 for FY 2026-27. Subsequently, pursuant to the City Council's adopted Maintenance and Funding Policy for Landscape Maintenance Districts, staff will be informing property owners within the district of the steps that can be taken to address the projected shortfall and what options the district property owners have within the upcoming fiscal year.

LMD 53

LMD 53 (Huff Court) is located within the Cabrillo neighborhood, north of Penny Way, east of Patricia Street, south of Firethorne Place, and west of Gina Drive. It comprises 8 benefit units and is projected to have an estimated negative fund balance of $2,017 at the end of FY 2026-27. With a maximum total levy amount of $4,655, the district is unable to entirely fund its projected annual expenses of $5,381 for FY 2026-27. Subsequently, pursuant to the City Council's adopted Maintenance and Funding Policy for Landscape Maintenance Districts, staff will be informing property owners within the district of the steps that can be taken to address the projected shortfall and what options the district property owners have within the upcoming fiscal year.

The deadline for delivering the Assessment information to Ventura County is July 6, 2026.

STRATEGIC PRIORITIES

This agenda item is a routine operational item or does not relate to the five strategic priorities adopted by City Council on March 16, 2021.

FINANCIAL IMPACT

For FY 2026-27, the assessment calculations are as follows: real property assessments of $2,435,030 (rounded, see Engineer's Report Table 6.4), interest income of $60,927 (rounded, Table 6.3), a general benefit contribution from the General Fund of $217,455 (rounded, Table 6.3), and additional funding from the General Fund for utilities in certain Districts of $73,105 (rounded, Table 6.3). Pursuant to their formation documents, Districts 31, 34, 38, 39, and 51 have a maximum allowed utility charge. As such, since the costs of utilities continue to increase, staff is recommending additional General Fund to cover the amounts that exceed their respective maximums.

COMMITTEE OUTCOME

This item did not originate in Committee because it is a continuation of an item previously approved by the City Council on June 1, 2026.

CITY COUNCIL OF THE CITY OF OXNARD

RESOLUTION NO.

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD, CALIFORNIA, CONFIRMING DIAGRAMS AND ASSESSMENTS FOR FISCAL YEAR 2026-27 IN CONNECTION WITH THE CITY'S LANDSCAPE MAINTENANCE DISTRICTS

WHEREAS, the City Council of the City of Oxnard has, by prior resolutions, established a number of Landscape Maintenance Districts (collectively the "Assessment Districts" and each an "Assessment District") pursuant to the Landscaping and Lighting Act of 1972 (Streets & Highways Code Section 22500 *et seq.*) (the "Act"); and

WHEREAS, a list of the Assessment Districts is attached hereto as Exhibit A and incorporated herein by reference; and

WHEREAS, in connection with each of the Assessment Districts, the City levies an annual assessment against real property to fund landscape maintenance that specially benefits the parcels located in that Assessment District; and

WHEREAS, the City has engaged NBS (the "Assessment Engineer") to provide assessment engineering services in connection with the Assessment Districts; and

WHEREAS, by its Resolution No. 16,047, adopted on June 1, 2026, the City Council ordered the Engineer to prepare and file reports pursuant to Section 22565 *et seq.* of the Act with respect to the FY 2026-27 levy of assessments in connection with each of the Assessment Districts; and

WHEREAS, by its Resolution No. 16,048, adopted on June 1, 2026, the City Council approved as filed a consolidated report of the Assessment Engineer entitled "City of Oxnard Fiscal Year 2026-27 Consolidated Engineer's Report for Landscape Maintenance Districts" (the "Report"), which is on file in the Office of the City Clerk, available for public inspection, and incorporated herein by reference; and

WHEREAS, by its Resolution No. 16,049 adopted on June 1, 2026 (the "Resolution of Intention"), the City Council declared its intention to levy and collect the assessments set forth in the Report for FY 2026-27 in connection within each of the Assessment Districts (the "Proposed Assessments"); and

WHEREAS, in no case do the rates of the Proposed Assessments in connection with an Assessment District exceed the maximum assessment rate previously approved for the Assessment District, as adjusted by any previously approved CPI adjustment; and

WHEREAS, the Resolution of Intention scheduled a public hearing (the "Public Hearing") for June 16, 2026 at 6:00 p.m. or as soon thereafter as practical, in the City Council Chambers, at 305 West Third Street, Oxnard, California with respect to the Proposed Assessments; and

WHEREAS, notice of the Public Hearing was published in the manner set forth in Section 22626(a) of the Act; and

WHEREAS, at the appointed time and place, the City Council held the Public Hearing and all interested persons were afforded the opportunity to hear and be heard; and

WHEREAS, having considered all oral statements and all written protests and statements made or filed at the Public Hearing, the City Council desires to levy the Proposed Assessments for FY 2026-27.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF OXNARD, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

1. Recitals. The foregoing recitals are true and correct and incorporated herein by this reference.

2. No Majority Protest. The City Council finds that no majority protest exists with respect to any of the Assessment Districts that would require the abandonment of all or any portion of any of the Proposed Assessments.

3. Assessment. The diagrams and assessments as set forth in the Report are hereby confirmed. This action constitutes the levy of the Proposed Assessments for FY 2026-27 for all Districts. Staff is directed to file the diagrams and assessments with the Ventura County Auditor and to cause the assessments to be collected at the same time and in the same manner as county taxes are collected.

4. Installments Authorized. In accordance with Streets and Highways Code Section 22660(a), the City Council hereby determines that the estimated cost of certain proposed improvements are greater than can conveniently be raised from a single assessment and orders that such estimated cost be collected in installments. General descriptions of these improvements, as well as the estimated costs thereof, the number of annual installments and years during which they are to be collected, and the maximum amount of each annual installment, are described in the Exhibit B attached hereto and incorporated herein by reference as though fully set forth. Moneys collected from the annual installments shall be accumulated in the improvement fund until there are sufficient moneys to pay all or part of the cost of the improvements.

5. Severability. If any provision of this Resolution or the application of any such provision is held invalid, such invalidity shall not affect other provisions or applications of this Resolution that can be given effect without the invalid provision or application, and to this end the provisions of this Resolution are severable and that the City Council declares that it would have adopted this Resolution irrespective of the invalidity of any particular portion of this Resolution.

6. Effective Date. This Resolution shall be effective immediately upon adoption.

7. Certification. The City Clerk shall certify to the adoption of this Resolution, and shall maintain on file as a public record this Resolution.

CITY COUNCIL OF THE CITY OF OXNARD

RESOLUTION NO. 16,049

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD, CALIFORNIA, DECLARING ITS INTENTION TO LEVY ASSESSMENTS AGAINST REAL PROPERTY FOR FISCAL YEAR 2026-27 IN CONNECTION WITH THE CITY'S LANDSCAPE MAINTENANCE DISTRICTS

WHEREAS, the City Council of the City of Oxnard has, by prior resolutions, established a number of Landscape Maintenance Districts (collectively the "Assessment Districts" and each an "Assessment District") pursuant to the Landscaping and Lighting Act of 1972 (Streets & Highways Code Section 22500 *et seq.*) (the "Act"); and

WHEREAS, a complete list of the Assessment Districts is attached hereto as Exhibit A and incorporated herein by reference; and

WHEREAS, in connection with each of the Assessment Districts, the City levies an annual assessment against real property to fund landscape maintenance that specially benefits the parcels located in that Assessment District; and

WHEREAS, the City has engaged NBS (the "Assessment Engineer") to provide assessment engineering services in connection with the Assessment Districts; and

WHEREAS, by prior resolution the City Council ordered the Engineer to prepare and file reports pursuant to Section 22565 *et seq.* of the Act with respect to the FY 2026-27 levy of assessments in connection with each of the Assessment Districts; and

WHEREAS, by prior resolution the City Council approved as filed a consolidated report of the Assessment Engineer entitled "City of Oxnard Fiscal Year 2026-27 Consolidated Engineer's Report for Landscape Maintenance Districts" (the "Report"), which is on file in the Office of the City Clerk, available for public inspection, and incorporated herein by reference; and

WHEREAS, the City Council desires to declare its intention to levy the assessments for FY 2026-27 as described in the Report.

NOW, THEREFORE, the City Council of the City of Oxnard resolves:

1. Recitals. The above recitals are all true and correct.

2. Declaration of Intent. The City Council hereby declares its intention to levy and collect assessments for FY 2026-27 within each Assessment District.

3. Name and Location of Assessment Districts. The name of each Assessment District is set forth in Exhibit A. The locations of each Assessment District are generally described in the name of the Assessment District and more specifically described in the Report.

4. Description of Improvements. Each Assessment District will fund landscape improvements, including, to the extent authorized by the formation documents for the District, associated hardscape, ornamental improvements, benches, lighting and other appurtenances. No substantial change to the improvements is proposed to be made for FY 2026-27.

5. Reference to Report. Reference is made to the Report for a full and detailed description of (i) the landscape improvements; (ii) the boundaries of the Assessment Districts; and (iii) the proposed assessments upon assessable lots and parcels of land within the Assessment Districts. The Report describes, among other things, each affected parcel of real property and the amount of the assessment for each such affected parcel for FY 2026-27.

6. As set forth in more detail in the Report, the assessments in connection with some of the Assessment Districts will be higher than in FY 2025-26. In no case will the rates for an Assessment District be higher than the maximum assessment rate previously approved for the Assessment District, as adjusted by any previously approved CPI adjustment.

7. Public Hearing. On June 16, 2026 at 6:00 p.m. or as soon thereafter as practical, in the City Council Chambers, at 305 West Third Street, Oxnard, California, the City Council will hold a full and fair public hearing on the question of the levy of the proposed assessments for FY 2026-27 (the "Hearing"). At the Hearing, the City Council will also hear and consider any objections or protests to the Report.

8. Notice. Notice of the Hearing shall be given in the manner set forth in Section 22626(a) of the Act.

9. Protest. Pursuant to Section 22628 of the Act, any interested person may, prior to the conclusion of the Hearing, file a written protest with the City Clerk of the City of Oxnard or, having previously filed a protest, may file a written withdrawal of that protest. A written protest shall state all grounds of objection. A protest by a property owner shall contain a description sufficient to identify the property owned by the property owner.

10. Severability. If any provision of this Resolution or the application of any such provision is held invalid, such invalidity shall not affect other provisions or applications of this Resolution that can be given effect without the invalid provision or application, and to this end the provisions of this Resolution are severable and that the City Council declares that it would have adopted this Resolution irrespective of the invalidity of any particular portion of this Resolution.

11. Effective Date. This Resolution shall be effective immediately upon adoption.

12. Certification. The City Clerk shall certify to the adoption of this Resolution, and shall maintain on file as a public record this Resolution.

CITY COUNCIL OF THE CITY OF OXNARD

RESOLUTION NO. 16,048

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD, CALIFORNIA, APPROVING A CONSOLIDATED ENGINEER'S REPORT REGARDING ASSESSMENTS AGAINST REAL PROPERTY FOR FISCAL YEAR 2026-27 IN CONNECTION WITH THE CITY'S LANDSCAPE MAINTENANCE DISTRICTS

WHEREAS, the City Council of the City of Oxnard has, by prior resolutions, established a number of Landscape Maintenance Districts (collectively the "Assessment Districts") pursuant to the Landscaping and Lighting Act of 1972 (Streets & Highways Code Section 22500 *et seq.*) (the "Act"); and

WHEREAS, a complete list of the Assessment Districts is attached hereto as Exhibit A and incorporated herein by reference as though fully set forth; and

WHEREAS, in connection with each of the Assessment Districts, the City levies an annual assessment against real property to fund public improvements that specially benefit the parcels located in that Assessment District; and

WHEREAS, the City has engaged NBS (the "Assessment Engineer") to provide assessment engineering services in connection with the Assessment Districts; and

WHEREAS, by prior resolution the City Council ordered the Assessment Engineer to prepare and file reports pursuant to Section 22565 *et seq.* of the Act with respect to the FY 2026-27 levy of assessments for each of the Assessment Districts; and

WHEREAS, the Assessment Engineer has prepared and filed a consolidated report entitled "City of Oxnard Fiscal Year 2026-27 Consolidated Engineer's Report for Landscape Maintenance Districts," (the "Report") which is on file in the Office of the City Clerk, available for public inspection, and the Report is incorporated herein by this reference; and

WHEREAS, the City Council now desires to approve the Report

NOW, THEREFORE, the City Council of the City of Oxnard resolves:

1. Recitals. The above recitals are all true and correct and incorporated herein by this reference.

2. Approval of Report. The City Council hereby approves the Report as filed.

3. Severability. If any provision of this Resolution or the application of any such provision is held invalid, such invalidity shall not affect other provisions or applications of this Resolution that can be given effect without the invalid provision or application, and to this end the provisions of this Resolution are severable and that the City Council declares that

CITY COUNCIL OF THE CITY OF OXNARD

RESOLUTION NO. 16,047

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD, CALIFORNIA, INITIATING PROCEEDINGS TO LEVY ASSESSMENTS AGAINST REAL PROPERTY FOR FISCAL YEAR 2026-27 IN CONNECTION WITH THE CITY'S LANDSCAPE MAINTENANCE DISTRICTS

WHEREAS, the City Council of the City of Oxnard has, by prior resolutions, established a number of Landscape Maintenance Districts (collectively the "Assessment Districts") pursuant to the Landscaping and Lighting Act of 1972 (Streets & Highways Code Section 22500 *et seq.*) (the "Act"); and

WHEREAS, a complete list of the Assessment Districts is attached hereto as Exhibit A and incorporated herein by reference as though fully set forth; and

WHEREAS, for each of the Assessment Districts, the City levies an annual assessment against real property to fund public improvements that specially benefit the parcels located in that Assessment District; and

WHEREAS, the City has engaged NBS (the "Assessment Engineer") to provide assessment engineering services in connection with the Assessment Districts; and

WHEREAS, the City Council desires to initiate proceedings to levy assessments in connection with the Assessment Districts for Fiscal Year (FY) 2026-27.

NOW, THEREFORE, the City Council of the City of Oxnard resolves:

1. Recitals. The above recitals are all true and correct.

2. Initiation of Proceedings. Pursuant to Section 22622 of the Act, the City Council hereby initiates proceedings in connection with the Assessment Districts for the levy of assessments for FY 2026-27.

3. Order to Engineer. The Assessment Engineer is hereby ordered to prepare and file reports pursuant to Section 22565 *et seq.* of the Act with respect to the FY 2026-27 levy of assessments in connection with each of the Assessment Districts. These reports may be consolidated into a single document for administrative convenience.

4. Improvements. The improvements associated with each of the Assessment Districts are substantially the same improvements as in FY 2025-26.

5. Projects. In accordance with Streets and Highways Code Section 22660(a), the City Council hereby determines that the estimated cost of certain proposed improvements are

greater than can conveniently be raised from a single assessment and, as a result, will be collected in installments. General descriptions of these improvements, as well as the estimated costs thereof, the number of annual installments and years during which they are to be collected, and the maximum amount of each annual installment, are described in the Exhibit B attached hereto and incorporated herein by reference as though fully set forth. Moneys collected from the annual installments shall be accumulated in the improvement fund until there are sufficient moneys to pay all or part of the cost of the improvements.

6. Severability. If any provision of this Resolution or the application of any such provision is held invalid, such invalidity shall not affect other provisions or applications of this Resolution that can be given effect without the invalid provision or application, and to this end the provisions of this Resolution are severable and that the City Council declares that it would have adopted this Resolution irrespective of the invalidity of any particular portion of this Resolution.

7. Effective Date. This Resolution shall be effective immediately upon adoption.

8. Certification. The City Clerk shall certify to the adoption of this Resolution, and shall maintain on file as a public record this Resolution.

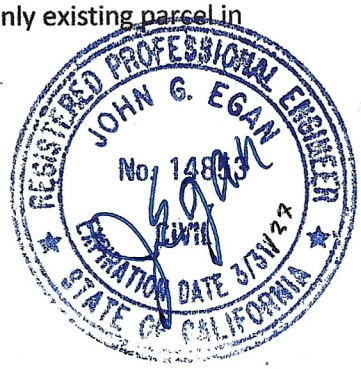
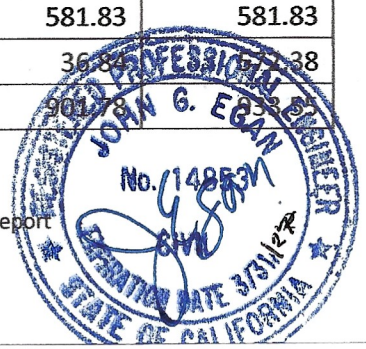
1. ENGINEERS LETTER



On June 1, 2026, the City Council of the City of Oxnard (the "City"), pursuant to the Landscaping and Lighting Act of 1972 (Streets & Highways Code Section 22500 et seq.) (the "1972 Act"), adopted its Resolution Initiating Proceedings for the Annual Levy and Collection of Assessments and ordered the preparation of Engineer's Reports for the City's Landscape Maintenance Districts (the "Districts") for Fiscal Year ("FY") 2026/27 and authorized that the reports be consolidated into a single report for administrative convenience.

The Resolution Initiating Proceedings directed NBS to prepare and file reports pursuant to Section 22565 et seq. of the 1972 Act with respect to the FY 2026/27 levy of assessments in connection with each of the Districts. These reports may be consolidated into a single document for administrative convenience. The report includes the diagrams for the Districts, showing the area and properties to be assessed, an estimate of the cost of the improvements, the plans and specifications for the improvements, and an assessment of the estimated costs of the improvements.



The assessments detailed in this Consolidated Engineer's Report (the "Report") are the amounts necessary to cover the portion of the estimated costs to maintain, install, operate and service the improvements within each District funded by payments received from the assessable real property within the District, in proportion to the special benefit received. The breakout by District is shown in the table below.

The following table shows: (i) the total amount to be collected against all parcels in the District in Fiscal Year 2026/27 ("FY 2026/27 Levy Amount"), (ii) the rate proposed for collection per acre, parcel or benefit unit in FY 2026/27 ("FY 2026/27 Proposed Rate"), and (iii) the maximum rate that could be levied in FY 2026/27 without conducting addition property-owner assessment ballot proceedings ("FY 2026/27 Maximum Rate"). The Maximum Rate (which has been adjusted, where applicable, by a previously approved inflation adjustment) is given for reference only. Only the Proposed Rate is recommended for levy in FY 2026/27. In many Districts the Proposed Rate is less than the Maximum Rate, as an assessment at the full Maximum Rate is not necessary or proposed. In future years the assessment may be levied up to the then-current Maximum Rate.

For all Districts except LMD 30 (Haas Automation) and LMD 43 (Greenbelt), rates are given on a per parcel or per lot basis and the number of "benefit units" is equal to the number of lots (generally one per assessable parcel) currently located in the District. This is also the methodology for Zones 2 and 4 of LMD 43 (Greenbelt). For LMD 30 (Hass Automation), Zones 1 and 3 of LMD 43 (Greenbelt), rates are given on a per acre basis and the number of "benefit units" is equal to the total assessable acreage in the District. For LMD 60 (Artisan), one benefit unit is assigned to the only existing parcel in the District.

District	Benefit Units	FY 2026/27 Levy Amount [3]	FY 2026/27 Proposed Rate [3]	FY 2026/27 Maximum Allowed Rate
LMD No. 3 (River Ridge)	516.00	$84,035.76	$162.86	$162.86
LMD No. 10 (Country Club Estates)	153.00	24,076.08	157.36	157.36

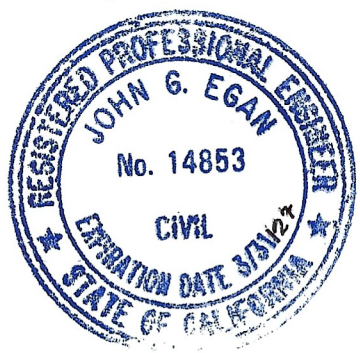
District	Benefit Units	FY 2026/27 Levy Amount [3]	FY 2026/27 Proposed Rate [3]	FY 2026/27 Maximum Allowed Rate
LMD No. 58 (Westwind)	156.00	$42,906.24	$275.04	$580.12
LMD No. 60 (Artisan)	1.00	37,575.06	37,575.06	76,801.79
Total	**5,996.96**	**$2,435,029.86**		

(1) LMD No. 43 (Greenbelt) FY 2026/27 Maximum Rates are as follows: Zone 1- Parc Rose $1,857.29/acre, Zone 2- Solana II $427.04/unit, Zone 3- Tierra Vista $1,790.06/acre, Zone 4- Mayfield $340.94/unit. The FY 2026/27 Proposed Rates are as follows: Zone 1- Parc Rose $1,857.29/acre, Zone 2- Solana II $427.04/unit, Zone 3- Tierra Vista $1,790.06/acre, Zone 4- Mayfield $340.94/unit.

(2) LMD No. 46 (Daily Ranch) FY 2026/27 Maximum Rates are as follows: Area A- $1,029.95/unit, Area B- $996.45/unit, Area C- $889.91/unit. The City pays for the maintenance of the Area D improvements, which have been removed from the LMD. The FY 2026/27 Proposed Rates are as follows: Area A- $1,029.95/unit, Area B- $996.45/unit, Area C- $889.91/unit.



(3) The FY 2026/27 Levy Amount and Proposed Rate may differ slightly from the Assessment Roll and final applied levy amounts due to rounding per the Ventura County Tax Collector's requirement of even-cent assessment amounts.

I, the undersigned, respectfully submit this Engineer's Report and, to the best of my knowledge, information and belief, the Engineer's Report, Assessments, and the Assessment Diagram herein have been prepared, computed and levied in accordance with the assessment methodology adopted, approved and ordered by the City Council of the City of Oxnard.

John G Egan

John G. Egan , P. E.
Assessment Engineer

5/21/2026

2. INTRODUCTION

2.1 Background

The City incorporated in 1903. Currently, the incorporated limits of the City include approximately 25 square miles. The City is located on the shores of the Pacific Ocean in the western portion of Ventura County. The City enjoys direct access to U.S. 101 Freeway and Pacific Coast Highway 1. The City is the largest City in Ventura County with a population of just over 200,000, accounting for approximately twenty-four percent (24%) of the County's population[i].

The City has utilized assessment districts (locally referred to as Landscape Maintenance Districts) to help fund the ongoing maintenance of various public improvements within new developments.

2.2 Engineer's Report Contents

The 1972 Act requires that the City Council conduct annual proceedings to levy assessments in the upcoming fiscal year.

The first step in this process is for the City Council to adopt a resolution that generally describes any proposed new improvements or any substantial changes in existing improvements and orders the engineer to prepare and to file the Engineer's Report.

The Engineer's Report must refer to the assessment district by its distinctive designation, specify the fiscal year to which the report applies, and, with respect to that year, contain all of the following:

- Plans and specifications for the improvements.
- An estimate of the costs of the improvements.
- A diagram for the assessment district.
- An assessment of the estimated costs of the improvements.
- If bonds or notes will be issued pursuant to Section 22662.5 of the 1972 Act, an estimate of their principal amount.

This Engineer's Report has been prepared pursuant to a resolution of the City Council of the City of Oxnard ordering the Report's preparation.

3. PLANS AND SPECIFICATIONS

Pursuant to sections 22567(a) and 22568 of the 1972 Act, this report describes the existing and any proposed improvements for the Districts. The sections below provide general descriptions of the improvements maintained by the Districts. The purpose of the Districts is to provide for the continued maintenance, operation, and servicing of various public improvements specially benefiting property within the Districts.

3.1 Description of Boundaries of the Districts

A rough description of the boundaries of each District can be found in Section 10.1. A more detailed map of each District is included in Section 10.3. Assessment Diagrams are included in Section 8.

3.2 Description of Improvements and Services

A description of each of the Districts and description of improvements can be found in Section 10.2 and the general location of the improvements can be found in Section 10.3 of this Report.

The improvements are generally described as: landscaping, lighting, park facilities, and facilities appurtenant to the same. Costs associated with installation, operation, maintenance and servicing of these facilities are eligible for funding, including, but not limited to, personnel, electrical energy, utilities such as water and gas, materials, contracting services, and other items necessary, and in connection with, these improvements. More specifically:

> The improvements authorized to be maintained are District-specific and vary between the Districts, the improvements provided may include, but are not limited to: ground cover, turf, trees, shrubs, the landscaped areas of detention basins, screen walls/fencing, park benches, trash containers, overhead structures, theme light poles, ornamental lighting, and sprinkler, irrigation and drainage systems, and may also include sidewalk and hardscape improvements along the landscaping, entry monuments, mailboxes and associated appurtenant facilities. Park improvements, if applicable, vary by park and may include landscape and open space, playground structures, exercise stations, restrooms, benches, picnic tables, and litter receptacles.
>
> Maintenance provided includes all necessary services, operations, administration and maintenance required to keep the above-mentioned improvements in a healthy, vigorous and satisfactory condition which may include, but is not limited to: repair, removal or replacement of all or any part of the landscaping, sidewalks, theme light poles or screen walls/fencing. Provision for the life, growth, health, and beauty of the landscaping, including cultivation, irrigation, trimming, mowing, spraying, fertilizing and treating for disease or injury. Removal of trimmings, rubbish, graffiti, debris and other solid waste from the landscaped areas, detention basins and screen walls/fencing.

Landscaping improvements were installed along the roadways of each District in order to create a common theme and neighborhood identity for parcels. Landscaping may include ground cover, turf and mulch, trees, shrubs and landscape up-lighting and sprinkler, irrigation, and drainage systems, and may include sidewalk and hardscape improvements along the landscaping.

Street tree improvements were installed along the roadways of each District in order to create a common theme and neighborhood identity for parcels. Aesthetically pleasing street trees welcome users to walkways, and shade tree canopies encourage use even during the hottest times of the year.

Park facilities enhance the overall quality of an area and are an important component of complete and sustainable neighborhoods. The parks within the Districts, when included, offer both active and passive recreational opportunities: a place to play, exercise, spend time with neighbors, or to relax. The parks within the Districts are developed and maintained to appeal to all age groups and interests and promote a healthy community. Recreation and park facilities have proven to be a potent factor in maintaining a high standard of livability in the community.

There are two types of parks within the Districts: mini parks and neighborhood parks. Mini parks are intended to serve a limited population within a short radius (usually less than one-third of a mile) and neighborhood parks are intended to be easily accessible to local residents and designed to serve the surrounding neighborhood.[ii] Park improvements vary by park, and may include landscape and open space, playground structures, exercise stations, restrooms, benches, picnic tables, and litter receptacles.

In addition to the actual costs of maintaining the improvements mentioned above, the City will incur costs for staff time and expenses directly related to the administration and management of the Districts. Staff time includes the oversight and coordination of both City and contractor provided services, creation of an annual engineer's report and resolutions, tax roll preparation, and placing the assessment amounts onto the County tax roll, along with responding to property owner inquiries.

3.3 Location of Improvements

The locations for District-specific improvements can be found in Section 10.3. Section 10.3 contains maps showing the approximate location (for reference only) of the authorized improvements for each District.

4. BENEFITS FROM IMPROVEMENTS

4.1 Special Benefits Identified

The improvements are expected to confer certain special benefits to parcels within each applicable District. The special benefits created by the improvements, which apply to the Districts as well as to properties outside the Districts and the public at large, may include the following:

Improved Aesthetics:

Street landscaping improvements improve the livability, commercial activity, appearance, and desirability for properties within each applicable District. Regular maintenance ensures that the improvements do not reach a state of deterioration or disrepair so as to be materially detrimental to properties adjacent to or in close proximity to the improvements within each applicable District. According to the Victoria Transport Policy Institute (2011), streetscapes have a significant effect on how people view and interact with their community. With streetscapes that are safe and inviting, people are more likely to walk, which can help reduce automobile traffic, improve public health, stimulate local economic activity, and attract residents and visitors to the community[iii].

The park improvements provide beautification, shade, and enhancement to properties, which creates a sense of community for the parcels within each applicable District. The overall appeal and desirability of an area is enhanced when public parks and recreational facilities are in place, improved, operable, safe, clean, and maintained. Conversely, appeal and desirability decrease when park and recreational facilities are unsafe or destroyed by the elements or vandalism. According to The Trust for Public Land, Corporate CEOs say that employee quality of life is the third most important factor in locating new businesses[iv].

Increased Safety

Safety for pedestrians involves not only a degree of protection from vehicular accidents, but also from criminal activity. Well maintained areas mitigate crime, especially vandalism, and enhance pedestrian safety. A recent study found that after landscape improvements were installed, there was a 46% decrease in crash rates across urban arterial and highway sites and a second study reviewed found a 5% to 20% reduction in mid-block crashes after trees and planters in urban arterial roads were put in place. In addition, there is less graffiti, vandalism, and littering in outdoor spaces with natural landscapes than in comparable plant-less spaces[v]. The Victoria Transport Policy Institute has found that streetscapes reduce traffic speeds and when combined with improved pedestrian crossing conditions can significantly reduce collisions[vi].

Economic Activity

Well maintained street landscape improvements not only make adjacent properties appear more stable and prosperous but can spur investment in the property. According to the Federal Highway Administration, landscaped sidewalks create an inviting place for customers to shop and do business[vii].

Parks attract both businesses and residents to communities. Making neighborhoods more friendly and enjoyable increases home ownership, creates jobs, and promotes positive consumer behavior. The desirability of properties for development increases based on the parcel's proximity to parks, sidewalks and trails[viii].

4.2 District-Exclusive Special Benefits Identified

Based on the location and improvement types, the following special benefits are exclusive to the properties and residents/visitors within the Districts.

Improved Air Quality

Plants, shrubs and turf remove pollutants from the air including smoke and dust[ix]. Residents within the Districts directly benefit from the trees inside of and surrounding their communities. One tree can remove an estimated 26 pounds of carbon dioxide annually from the atmosphere[x].

Traffic Screen

Landscaping creates a barrier between properties within the District and the exterior streets, offering privacy and reducing street/traffic noise and headlight glare[xi].

Conserve Natural Resources

Trees shading homes reduce temperatures and further allow for air conditioning units to run more efficiently[xii]. According to the California Energy Commission: "Planting the correct trees, shrubs, vines and groundcover can make your home both warmer in the winter and cooler in the summer. In fact, the right type of tree can reduce your summer cooling costs by 20 to 40 percent!"[xiii]

Increased Job Satisfaction and Productivity

Studies have shown that employees with views of landscaping have greater satisfaction than those with no view. Also, psychologists have found that workers with access to plants and landscaping tend to be more productive[xiv].

Increased Community Appeal

Cohesive landscaping increases the appeal of a community. Park and streets trees have been perceived to have high value (second only to education) of services offered by a municipality[xv].

Overall Livability

As a result of the collective improvements being maintained, the overall livability within each District will increase. The Victoria Transport Policy Institute expands on the concept of livability and the various benefits associated with that designation:

"*The livability of an area increases property desirability and business activity. Livability is largely affected by conditions in the public realm, places where people naturally interact with each other and their community, including: streets, parks, transportation terminals and other public facilities. Livability also refers to the environmental and social quality of an area as perceived by employees, customers and visitors. This includes local environmental conditions, the quality of social interactions, opportunities for recreation and entertainment, aesthetics, and existence of unique cultural and environmental resources*."[xvi]

4.3 General Benefits Identified

General benefit is an overall and similar benefit to the public at large resulting from the maintenance activities to be provided by the assessments levied. The improvements to be maintained by the District are located within the District boundaries.

The landscaping, tree and park improvements provide aesthetic, safety and economic benefits to the property within the District, but it is recognized that the ongoing District maintenance activities will also provide a level of benefit to some property within proximity to the District, as well as visitors and individuals passing through the District. Traffic from property within and outside of the District as well as individuals passing through the District area will be able to utilize the park improvements and view the maintained landscaping and trees. Therefore, the general benefit created as a result of the District maintenance activities has been considered.

Benefit to Property within Proximity but Outside of the Districts (General Benefit)

The landscaping, tree and park improvements will provide a level of improved aesthetic, increased safety, and economic activity benefits to some property outside of the Districts, but within proximity to property within District's boundary. In addition, people living outside of the Districts have access to and use of the parks. Since these benefits are conferred on properties outside of the Districts, this is considered to be a general benefit.

Benefit to Pass Through Traffic and Public at Large (General Benefit)

People and vehicles traveling through the Districts may receive a level of improved aesthetic, increased safety, and economic activity benefits from the maintenance of the landscaping and tree improvements. Since these benefits are conferred on pass through traffic and the public at large, this is considered to be a general benefit.

5. QUANTIFICATION OF BENEFIT

The California Constitution requires that:

> An agency which proposes to levy an assessment shall identify all parcels which will have a special benefit conferred upon them and upon which an assessment will be imposed. The proportionate special benefit derived by each identified parcel shall be determined in relationship to the entirety of the capital cost of a public improvement, the maintenance and operation expenses of a public improvement, or the cost of the property related service being provided. No assessment shall be imposed on any parcel which exceeds the reasonable cost of the proportional special benefit conferred on that parcel. Only special benefits are assessable, and an agency shall separate the general benefits from the special benefits conferred on a parcel. Parcels within a district that are owned or used by any agency, the State of California or the United States shall not be exempt from assessment unless the agency can demonstrate by clear and convincing evidence that those publicly owned parcels in fact receive no special benefit.

As a result of the maintenance and operation of the authorized improvements, there will be a level of general benefit to people that do not live in or intend to conduct business within the Districts. In order for property within the Districts to be assessed only for that portion of special benefits received from the District's maintenance activities, general benefits provided by the ongoing maintenance of the improvements need to be quantified. The amount of general benefit that is provided from the District's maintenance activities cannot be funded via property owners' assessments.

5.1 Benefits from Landscaping and Street Tree Improvements

The separation of special benefits conferred to the properties in the Districts from the general benefits conferred to people or property outside the Districts corresponds to the physical location of the improvements. Based upon the location of the improvements, the improvements are categorized into one of the following categories: exterior or interior streets. The streets classified as exterior primarily include arterial and collector streets that are designed to carry pass-through traffic and internal traffic movement throughout the City. The streets classified as interior are primarily those adjacent to homes and intended to serve the local community with fewer average daily trips (ADT) than those classified as arterial and collector. For detailed traffic calculation information, see Section 10.6.

In March 2017, at the direction of the City Council, an analysis was prepared that removed the improvements on arterial (major traffic corridor) streets. Districts, which contained improvements only on arterial streets, were dissolved as of the Fiscal Year 2017/18. The improvements on exterior streets located in the remaining Districts as detailed below are only included on local and collector streets.

Exterior Streets

The streets bordering each District, categorized as exterior, are used as main access points to and from properties within the Districts in addition to providing circulation between the interior streets and the City's roadway network. The exterior streets with landscaping improvements serve not only residents in the immediate vicinity, but persons who live outside of the Districts and are passing by. The City's recent traffic studies do not identify the percentage of traffic on exterior streets which is pass-through traffic.

Before the determination and allocation of the percentage of special and general benefit for the exterior streets can be made, the estimated pass-through traffic must be computed. In lieu of having a study that identifies the pass-through traffic on exterior streets, the estimated number of trips generated by each parcel within the Districts has been calculated and analyzed in combination with the City's traffic study that provides the ADT on various sections of the exterior streets throughout the City.

For each District and for only those streets with improvements authorized to be maintained, the estimated number of trips for special benefit purposes (as determined by the projected trips generated by the District parcel characteristics), was calculated on the collector streets to estimate pass-through trips. The pass-through trips are vehicles driving along the maintained streets within the District for a portion of their trips, but not residing or conducting business within the District. Adjustments to traffic counts utilized neighborhoods surrounding each District with access points on the specified collector street; based on the trips generated by those neighborhoods averaged by the number of access points on the specified collector street.

Interior Streets

The streets within each District categorized as interior were intended to serve individual neighborhoods and not pass-through traffic. From a visual inspection of the layout of each District, one must conclude the interior streets are exclusively intended for the benefit of the parcels on such streets. There is no local street that provides a direct or efficient means of traveling from one place to another such that one would reasonably expect a driver to purposefully choose these interior streets as the best route for travel through the City unless necessary because the route either began or ended with a parcel in the District. A route beginning or ending with a parcel within the District does not include the "general public" for purposes of determining general benefit.

However, given the location to the schools, parks, and commercial properties within the City, there are bound to be drivers that make use of the interior streets to turn around or go back from where they came. Additionally, one can imagine a minimal degree of pass-through traffic even on something such as a cul-de-sac. A conservative estimate of 1.00% for each improvement type would result in the general benefits derived from the street landscaping and tree improvements on local streets to be 2.00% and the special benefit is estimated to be 98.00%.

District-Exclusive Special Benefits

To account for the district-exclusive special benefits received from the improvements (Section 3.2) that are located on exterior streets, twenty percent (20%) of the improvements are excluded from the pass-through calculations.

Improved Aesthetic, Increased Safety, and Economic Activity General Benefit Percentage from Landscaping and Tree Improvements

The general benefit percentages as determined by the method outlined in the sections above have been applied (as applicable) to each street category within the Districts. The area in square feet of landscaping and count of street trees being maintained was determined after review of the City's geospatial database and the authorized improvements as shown on the original diagrams approved at the formation of each District.

The general benefit percentage for each category of street was multiplied by the total square footage, less twenty percent (20%) for the district-exclusive special benefits, being maintained for such street category. The general benefit square footage was summed for both street categories and divided into the total square footage of all landscaping maintenance. The result is the overall improved aesthetics, increased safety, and economic activity general benefit percentage from landscaping improvements. The same method was followed to calculate the general benefit from the street tree improvements. The improved aesthetics, increased safety, and economic activity general benefit percentages from landscaping and street tree improvements for each District are shown in the table below. For each District's specific calculation please refer to Section 10.5.

District	General Benefit from Landscaping Improvements	General Benefit from Street Tree Improvements
LMD No. 3 (River Ridge)	2.00%	2.00%
LMD No. 10 (Country Club Estates)	2.00%	2.00%
LMD No. 11 (St. Tropez)	14.13%	18.24%
LMD No. 12 (Standard Pacific)	2.00%	2.00%
LMD No. 13 (Le Village)	11.58%	11.46%
LMD No. 14 (California Cove)	7.51%	7.97%
LMD No. 16 (California Lighthouse)	28.28%	28.28%
LMD No. 23 (Greystone)	46.32%	11.04%
LMD No. 24 (Vineyards)	27.15%	8.97%
LMD No. 25 (The Pointe)	2.00%	2.00%
LMD No. 27 (Rose Island)	47.25%	39.54%
LMD No. 28 (Harborside)	2.00%	2.00%
LMD No. 30 (Haas Automation)	2.00%	2.00%
LMD No. 31 (Rancho De La Rosa)	4.77%	3.00%
LMD No. 32 (Oak Park)	2.00%	2.00%
LMD No. 33 (El Paseo)	2.00%	2.00%
LMD No. 34 (Sunrise Pointe & Sunset Cove)	2.00%	2.00%
LMD No. 36 (Villa Santa Cruz & Villa Carmel)	16.24%	8.23%
LMD No. 37 (Pacific Breeze)	27.14%	30.38%
LMD No. 38 (Aldea Del Mar)	2.00%	2.00%
LMD No. 39 (Promesa/Sueno & DR Horton/Seawinds)	2.00%	2.00%
LMD No. 40 (Cantada)	2.00%	2.00%
LMD No. 41 (Pacific Cove)	2.00%	2.00%
LMD No. 42 (Cantabria & Coronado)	8.61%	4.83%
LMD No. 43 (Greenbelt)	2.00%	2.00%
LMD No. 46 (Daily Ranch)	2.00%	2.00%
LMD No. 47 (Sycamore Place)	2.00%	2.00%
LMD No. 49 (Cameron Ranch)	2.00%	2.00%
LMD No. 50 (Pleasant Valley Senior Housing)	44.84%	44.84%
LMD No. 51 (Pfeiler)	2.00%	2.00%
LMD No. 52 (Wingfield)	2.00%	2.00%
LMD No. 53 (Huff Court)	2.00%	2.00%
LMD No. 54 (Meadowcrest Villas)	50.70%	50.70%
LMD No. 55 (Wingfield West)	2.00%	2.00%
LMD No. 58 (Westwind)	13.94%	13.94%
LMD No. 60 (Artisan)	2.00%	2.00%

5.2 Benefits from Park Improvements

There are five Districts with park improvements included as an authorized improvement. The Districts are: LMD 32, LMD 39, LMD 46, LMD 51 and LMD 58. As a result of the maintenance and operation of the park improvements, there will be a level of improved aesthetics and economic activity general benefit conferred to people that do not live within the Districts. In order for property within each District to be assessed only for that portion of special benefits received from the District's park maintenance activities, general benefits provided by the ongoing maintenance of the improvements need to be quantified. The amount of general benefit provided from the District-specific maintenance activities cannot be funded via property owners' assessments.

There are two types of parks maintained by the Districts: Mini Parks and Neighborhood Parks. Mini Parks (also known as pocket parks) are intended to serve a limited population within a short radius (usually less than one-third of a mile) and Neighborhood Parks are intended to be easily accessible to local residents and designed to serve the surrounding neighborhood.[xvii] The following lists the District-specific parks being maintained through the assessments.

District	Park	Acreage	Park Classification	Service Radius(1)
LMD 32	Borchard Oak Park	0.5	Mini Park	less than 0.3 miles
LMD 39/LMD 46(2)	Promesa/Sueno Park	4.0	Neighborhood Park	¼ to ½ mile
LMD 51	Pfeiler Park	3.1	Neighborhood Park	¼ to ½ mile
LMD 58	Garden City Acres Park	5.5	Neighborhood Park	¼ to ½ mile

(1) Service radius as defined in the April 2006 Background Report; defined in tables 4-28
(2) Park within LMD 39; per formation Engineer's Report LMD 46 receives a special benefit from the park and pays a proportional share of the park costs (51.78%).

Neighborhood parks, according to City standards, can range up to 10 acres. The City does not have a standard service radius for parks within the Neighborhood classification, however the National Recreation and Park Association (NRPA) has developed standards that have been traditionally applied. The most recent NRPA service radius for a Neighborhood Park is ¼ to ½ mile.[xviii] In addition, there is a standard of ½ mile as a reasonable distance to walk to a park.[xix] Even though the park facilities were installed for the benefit of the residents within the Districts, and most parcels outside of the boundaries have their own park within close proximity, there will be some general benefit to those people who do not live or conduct business inside the Districts but are within the service radius listed above.

The Summary of Travel Trends, 2009 National Household Travel Survey (NHTS) prepared by the U.S. Department of Transportation Federal Highway Administration analyzed the number of person trips by various modes of transportations such as private vehicle, transit, walking or some other means of transportation. According to the Pacific Division data extracted from the 2009 NHTS database, of the annual 181,703 (in millions) total person trips, 23,399 (in millions) or 12.88% of those person trips were for social/recreational purposes (using all modes of transportation: walking, bicycle, vehicle, et.al.)[xx].

According to the U.S. Census Bureau (2010-2014), the average household size in the City is 3.98 persons[xxi]. Based on this average household size, and the number of residential units within each District, the following details the number of people residing within and outside the boundaries of each applicable District with direct access to the park and within the corresponding park service radius.

LMD 32		
.3 Mile Park Population	Estimated Number of Residential Units	Estimated Number of Persons[1]
Within LMD 32	27	108
Outside LMD 32[2]	491	1,954
Total Population within .3 mile and having direct access to park	**518**	**2,062**

(1) U.S. Census Bureau (2010) average household size in the City is 3.98 persons.

(2) There are additional parcels that are within the .3-mile radius, but without direct access to the LMD 32 park (i.e. would have to cross arterial streets); these parcels have access to parks that are within a closer proximity than the LMD 32 park and are not included in the residential unit count.

LMD 39 and LMD 46		
1/2 Mile Park Population	Estimated Number of Residential Units	Estimated Number of Persons[1]
Within LMD 39	244	971
Within LMD 46	262	1,043
Outside LMD 39/LMD 46[2]	392	1,560
Total Population within ½ mile and having direct access to park	**898**	**3,574**

(1) U.S. Census Bureau (2010) average household size in the City is 3.98 persons.

(2) There are additional parcels that are within the 1/2-mile radius, but without direct access to the LMD 39/LMD 46 park (i.e. would have to cross arterial streets, railroad tracks); these parcels have access to parks that are within a closer proximity than the LMD 39/LMD 46 park and are not included in the residential unit count.

LMD 51		
1/2 Mile Park Population	Estimated Number of Residential Units	Estimated Number of Persons[1]
Within LMD 51	219	872
Outside LMD 51[2]	1,560	6,209
Total Population within ½ mile and having direct access to park	**1,779**	**7,081**

(1) U.S. Census Bureau (2010) average household size in the City is 3.98 persons.

(2) There are additional parcels that are within the 1/2-mile radius, but without direct access to the LMD 51 park (i.e. would have to cross arterial streets); these parcels have access to parks that are within a closer proximity than the LMD 51 park and are not included in the residential unit count.

LMD 58		
1/2 Mile Park Population	Estimated Number of Residential Units	Estimated Number of Persons[1]
Within LMD 58	156	621
Outside LMD 58[2]	772	3,073
Total Population within ½ mile and having direct access to park	**928**	**3,694**

(1) U.S. Census Bureau (2010) average household size in the City is 3.98 persons.

(2) There are additional parcels that are within the 1/2-mile radius, but without direct access to the LMD 58 park (i.e. would have to cross arterial streets); these parcels have access to parks that are within a closer proximity than the LMD 58 park and are not included in the residential unit count.

In order to determine the estimated total number of persons who are within close proximity (service radius) to each of the park improvements that may utilize the park (for all modes of transportation), the 12.88% of person trips reported from the NHTS Pacific Division study (trips for social/recreational purposes) were multiplied by the total number of persons within the park service radius and having direct access to the park, but outside of the District boundary.

Within Service Radius Outside LMD boundary	Estimated Number of Persons Outside	Estimated Number of Persons using LMD Specific Park
Outside LMD 32	1,954	252
Outside LMD 39/LMD 46	1,560	201
Outside LMD 51	6,209	800
Outside LMD 58	3,073	395

Applying the number of trips that persons outside the District boundaries may use the parks, divided by the total population within the service radius having direct parks access, the estimated percentage of persons receiving general benefit because they do not reside within the District, is shown in the following table:

Within Service Radius Outside LMD boundary	Estimated Number of Persons Outside using LMD specific Park[1]	Total Park Service Area Population	% of General Benefit
Outside LMD 32	252	2,062	12.22%
Outside LMD 39/LMD 46	201	3,574	5.62%
Outside LMD 51	800	7,081	11.30%
Outside LMD 58	395	3,693	10.70%

(1) Estimated number of persons previously determined within park service radius and outside of the District boundary, multiplied by 12.88% social/recreational trips.

LMD 32 – Improved Aesthetics and Economic Activity General Benefit from Park Improvements

Given the location and size of the LMD 32 park, it is very unlikely the public at large, beyond the service radius, would seek out or use the smaller local park especially when the City has larger community and regional parks that are intended to attract people from outside areas, and provide recreational opportunities beyond those supplied by local, neighborhood parks. However, there are people who may

randomly decide to visit the park. Consequently, it is likely that certain members of the public at large may use the smaller parks, and as such, a 1.00% general benefit has been assigned to account for usage by the public at large.

.3 Mile and Direct Access General Benefit	12.22%
Public at Large Benefit Park General Benefit	1.00%
Total LMD 32 Park General Benefit	**13.22%**

Based on the above calculations, the general benefit portion resulting from the LMD 32 park improvements is estimated to be 13.22% and the special benefit is estimated to be 86.78%.

LMD 39/LMD 46 – Improved Aesthetics and Economic Activity General Benefit from Park Improvements

Given the location and size of the LMD 39/LMD 46 park, it is very unlikely the public at large, beyond the service radius, would seek out or use the neighborhood park especially when the City has larger community and regional parks that are intended to attract people from outside areas, and provide recreational opportunities beyond those supplied by local, neighborhood parks, and other neighborhoods within the City have their own local parks. However, there are people who may randomly decide to visit the park. Consequently, it is likely that certain members of the public at large may use the smaller parks, and as such, a 1.00% general benefit has been assigned to account for usage by the public at large.

½-Mile and Direct Access General Benefit	5.62%
Public at Large Benefit Park General Benefit	1.00%
Total LMD 39/LMD 46 Park General Benefit	**6.62%**

Based on the above calculations, the general benefit portion resulting from the LMD 39/LMD 46 park improvements is estimated to be 6.62% and the special benefit is estimated to be 93.38%.

LMD 51 – Improved Aesthetics and Economic Activity General Benefit from Park Improvements

Given the location and size of the LMD 51 park, it is very unlikely the public at large, beyond the service radius, would seek out or use the neighborhood park especially when the City has larger community and regional parks that are intended to attract people from outside areas, and provide recreational opportunities beyond those supplied by local, neighborhood parks, and other neighborhoods within the City have their own local parks. However, there are people who may randomly decide to visit the park. Consequently, it is likely that certain members of the public at large may use the smaller parks, and as such, a 1.00% general benefit has been assigned to account for usage by the public at large.

½-Mile and Direct Access General Benefit	11.30%
Public at Large Benefit Park General Benefit	1.00%
Total LMD 51 Park General Benefit	**12.30%**

Based on the above calculations, the general benefit portion resulting from the LMD 51 park improvements is estimated to be 12.30% and the special benefit is estimated to be 87.70%.

LMD 58 – Improved Aesthetics and Economic Activity General Benefit from Park Improvements

Given the location and size of the LMD 58 park, it is very unlikely the public at large, beyond the service radius, would seek out or use the neighborhood park especially when the City has larger community and regional parks that are intended to attract people from outside areas, and provide recreational opportunities beyond those supplied by local, neighborhood parks, and other neighborhoods within the City have their own local parks. However, there are people who may randomly decide to visit the park, use the open fields for sporting practice, and the City's mobile activity center does operate sessions at this park location. Consequently, a 5.00% general benefit has been assigned to account for usage by the public at large.

.50 Mile and Direct Access General Benefit	10.70%
Public at Large Benefit Park General Benefit	5.00%
Total LMD 58 Park General Benefit	**15.70%**

Based on the above calculations, the general benefit portion resulting from the LMD 58 park improvements is estimated to be 15.70% and the special benefit is estimated to be 84.30%. Note, per the formation Engineer's Report, the LMD 58 special benefit related to the Garden City Acres Park is 26.18%. The 15.70% general benefit calculation shown above is the percentage of general benefit of the originally calculated 26.18% special benefit. The special benefit is estimated to be 84.30% of the 26.18% previously determined special benefit.

5.3 Collective District General Benefit

Since each District is comprised of a blend of improvements, the maintenance activities and general benefit conferred must be addressed in a collective form rather than independently. Therefore, the arithmetic mean of the general benefit percentages has been used to quantify the overall level of general benefit for the District. This general benefit result is provided in the table below:

District	General Benefit from Landscaping Improvements	General Benefit from Street Tree Improvements	General Benefit from Park Improvements	Total General Benefit
LMD No. 3 (River Ridge)	2.00%	2.00%	N/A	2.00%
LMD No. 10 (Country Club Estates)	2.00%	2.00%	N/A	2.00%
LMD No. 11 (St. Tropez)	14.13%	18.24%	N/A	16.18%
LMD No. 12 (Standard Pacific)	2.00%	2.00%	N/A	2.00%
LMD No. 13 (Le Village)	11.58%	11.46%	N/A	11.52%
LMD No. 14 (California Cove)	7.51%	7.97%	N/A	7.74%
LMD No. 16 (California Lighthouse)	28.28%	28.28%	N/A	28.28%
LMD No. 23 (Greystone)	46.32%	11.04%	N/A	28.68%
LMD No. 24 (Vineyards)	27.15%	8.97%	N/A	18.06%
LMD No. 25 (The Pointe)	2.00%	2.00%	N/A	2.00%
LMD No. 27 (Rose Island)	47.25%	39.54%	N/A	43.40%
LMD No. 28 (Harborside)	2.00%	2.00%	N/A	2.00%

6. ESTIMATE OF COSTS

The estimated costs associated with the improvements as described in the Plans and Specifications are summarized on the following pages.

6.1 Fiscal Year 2026/27 Cost Estimates

The following table shows estimated costs associated with each District for work to occur in FY 2026/27.

Table 6.1

Fiscal Year 2026/27 Cost Estimates

Account Code	District Name	Benefit Units	Service Level[2]	Maintenance Costs (53200 & 52900)	Utility - Electric (54010)	Utility - Water (54040)	Utility - Wastewater (54030)	City Indirect Costs	Special Districts Personnel	Special Districts Overhead	Consulting & Professional Services	Transfers Out [(1)]	Transfers In [(1)]	County Collection Fee	Total Expenses
20303801	LMD No. 3 (River Ridge)	516.00	2	$39,300.00	$980.00	$35,000.00		$1,878.00	$14,604.60	$6,397.42	$1,962.00	$0.00	$0.00	$297.81	$100,419.83

(1) Transfers In and Out from prior years including LMD 46 transfer of 51.78% of the LMD 39 park maintenance costs to LMD 39 and the LMD 33 transfer of funds to LMD 34 to cover a portion of Kohala St basin. Maintenance costs are directly expensed to the appropriate districts from the contractor invoices. Maintenance Costs budgets for these districts include their direct share of expenses.

(2) Service levels are further described in Section 10.4 and generally indicate the most frequent interval of regularly scheduled services.

6.1.1 COST CATEGORIES AND DESCRIPTIONS

The following relate to the above table:

Benefit Units: For all Districts except LMD 30 (Haas Automation) and LMD 43 (Greenbelt), each "benefit units" is a dwelling unit or lot (generally one per assessable parcel) currently located in the District. This is also the methodology for Zones 2 and 4 of LMD 43 (Greenbelt). For LMD 30 (Hass Automation) and Zones 1 and 3 of LMD 43 (Greenbelt), each benefit unit is an acre of assessable territory.

Service Level: The amount of contractor maintenance servicing as described in Section 10.4 that is planned in the Fiscal Year for the District.

Maintenance Costs (53200): The amounts included in this category include the contractor maintenance costs for the District based on bids received and the planned FY 2026/27 service level; on-call services costs for work to be performed outside of the scope of the routine maintenance service contract; projects and future project installments (see section 6.2 for project schedule and installment details).

Maintenance Costs (Supplies) (52900): The amounts included in this category include supplies and materials used to perform routine maintenance.

Utility – Electric (54010): The electric utility costs for the Fiscal Year.

Utility – Water (54040): The water utility costs (for irrigation and plumbed facilities) for the Fiscal Year.

Utility – Wastewater (54030): The wastewater costs for the Fiscal Year.

City Indirect Costs: Costs incurred by City departments other than the Special Districts Department that are used to support the activities of the Special District Department associated with the LMD programs. Costs allocated based on each Districts' Maintenance Costs in proportion to the sum of the collective Maintenance Costs.

Special Districts Personnel: Special Districts Department salaries and benefits costs associated with the LMD programs. Costs allocated based on each Districts' Maintenance Costs in proportion to the sum of the collective Maintenance Costs.

Special Districts Overhead: Costs incurred by the Special Districts Department (such as office expenses and shared maintenance equipment) in connection with the LMD programs. Costs allocated based on each Districts' Maintenance Costs in proportion to the sum of the collective Maintenance Costs.

Consulting & Professional Services: Third party (non-City staff) contracted costs for administering the Districts, preparing the Engineer's Reports and other tasks associated with annual proceedings. Costs allocated based on each Districts' Maintenance Costs in proportion to the sum of the collective Maintenance Costs unless amounts are otherwise contracted at a specified rate per District.

Transfers Out: Amounts that are paid by the District to another District to cover improvements that benefit the other District. LMD 58 pays 26.18% of the City Acres Park maintenance costs.

Transfers In: These represent amounts that are received by a District from another District.

County Collection Fee: The costs required by the County to place the assessment on the Tax Roll. The Fiscal Year 2026/27 cost is estimated to be $0.22 per parcel plus 0.25% of the total levy.

Total Expenses: The sum of all costs described above.

6.2 Five-Year Project Schedule

A number of maintenance, repair and replacement activities are conducted on a less-than-annual basis in each District. The nature, schedule, and estimated cost of these activities is shown in the table below.

Costs for projects that are planned to be completed in FY 2026/27 have been included in the Maintenance Costs shown in table 6.1. Projects scheduled in subsequent years will be funded through equal installments. For example, a project scheduled for FY 2027/28 will be funded through two equal installments, one collected in FY 2026/27 and one in FY 2027/28. Similarly, a project scheduled for FY 2027/28 will be funded through three equal installments, one collected in FY 2025/26, FY 2026/27, and FY 2027/28.

In some cases, the projects, costs, and planned dates of implementation listed in Table 6.2 are different from what was shown in the Engineer's Report for FY 2025/26. These differences exist for a number of reasons: (i) some work that was previously treated as a project to be funded with installments has been determined to be more appropriately treated as work that should be funded on a pay-as-you-go basis; (ii) some projects previously projected to be undertaken in FY 2026/27 or later years are, as a result of insufficient expected revenues or lack of need, no longer projected to occur; and (iii) in some cases the current best projection of costs or project date is different from what was shown in the prior Engineer's Report.

Table 6.2 shows, for each District, the amount of previously paid installments expected to be on hand as of June 30, 2026, anticipated uses in FY 2026/27, anticipated collections in FY 2026/27, and anticipated balances as of June 30, 2027. Where installments have been collected against a "project" that is now being funded on a pay-as-you-go basis or a project has been cancelled due to insufficient expected revenues or lack of future needs, the funds are shown as being removed from the installment balances and placed in the District's improvement Fund.

The following pages contain the Five-Year Project Schedule for each District with active Installment Projects planned, as well as the related Project Collection Installment Balances.

Account Code	District	Project Name	Annual Installments	FY 26/27 Project Total	FY 27/28 Project Total	FY 28/29 Project Total	FY 29/30 Project Total	FY 30/31 Project Total	5-Year Estimated Total Expense

(1) As projected by the City's Finance Department as of April 1, 2026.

6.3.1 CITY CONTRIBUTIONS AND OTHER INCOME DESCRIPTIONS

The City Contributions and Other Income categories shown in table 6.3 are described as follows:

General Fund Contribution for General Benefit: The "Total General Benefit" percentage in table 5.3, multiplied by the total costs estimated for the District (as shown in table 6.1) paid by the General Fund for the General Benefit of the District's improvements.

General Fund Contribution for Utility Overage: The amount contributed by the General Fund to offset overages in annual utility cost increases over 5% per year from the original budget. The 5% increase cap is only applicable to Districts with specific utility inflation cap language outlined in the formation Engineer's Reports.

Interest Income: Amounts earned as interest on existing fund balances during the prior fiscal year.

6.4 Net Assessment Amount

The net revenues to be raised in order to fully fund the FY 2026/27 improvements and services (including Operating Reserve Targets as shown in table 6.5) are shown in the following table:

Table 6.4

Net Assessment Amount

(1) Excludes even-cent installment rounding for placement on the Ventura County Tax Roll.

6.4.1 NET ASSESSMENT AMOUNT DESCRIPTIONS

The Net Assessment Amount categories shown in Table 6.4 are described as follows:

Total Expenses: The total estimated costs for FY 2026/27 as shown in Table 6.1.

Operating Reserve Target: Operating reserves necessary to fund costs expected to be incurred during the first portion of FY 2026/27 as shown in Table 6.5.

Future-Year Project Installment Collection: Installments due as shown in Table 6.2.

Contributions from General Fund: Contributions from the General Fund as shown in Table 6.3.

Interest Income: Anticipated interest as shown in Table 6.3.

Released Prior Year Installment Collections: Represents funds collected and held for future year projects in the 2025/26 Engineer's Report that are being released to the District. The release of the funds is due to project delivery/expense, project cancellation and/or reevaluation of funding capacity.

Surplus Credit: The projected surplus available on June 30, 2026, as shown in Table 6.6.

Net Assessment Requirement: The total amount that would need to be assessed in order to fully fund all costs and the Operating Reserves. This equals Total Expenses plus Operating Reserve Requirement plus Installments Due less General Fund Contribution less Interest Income less Surplus Credit.

Net Assessment: The amount that will actually be assessed in FY 2026/27. For most Districts, this is the same as (or, aside from rounding, essentially the same as) the Net Assessment Requirement. In some instances, it is lower, generally because the rate necessary to raise the Net Assessment Requirement would exceed the maximum allowable rate.

Remaining Deficit/Surplus: A negative number in this column represents the amount by which the Net Assessment Requirement exceeds the Net Assessment. This means that the assessment levied will not be sufficient to fully fund the desired Operating Reserve.

6.5 Operating Reserve Target

As authorized by Section 22569(a) of the 1972 Act, the City seeks to have each District maintain an operating reserve that does not exceed the estimated costs of maintenance and servicing to December 10 of the fiscal year, or whenever the city expects to receive its apportionment of special assessments from the county, whichever is later. Additionally, pursuant to City Council approved Maintenance and Funding Policy for Landscape Maintenance Districts, the City Council has set a reserve target range that establishes a minimum and maximum Operating Reserve balance target that assists in the identification of districts that may need to have a levy credit, a change to the service level (see Section 10.4 for Levels of Service), an assessment increase through a protest ballot proceeding, or potential additional projects. The minimum and maximum Reserves balances are set at 16.6% and 47.4% of the expenses for FY 2026/27 (including scheduled FY 2026/27 Projects as shown on table 6.2).

The operating reserves necessary to fund costs expected to be incurred during the first portion of FY 2026/27 are as follows:

Table 6.5

Operating Reserve Target

District	Minimum 16.6% Operating Reserve Target	Maximum 47.4% Operating Reserve Target
LMD No. 3 (River Ridge)	$17,170	$49,027

LMD No. 60 (Artisan)	64,550	(30,344)	34,206

(1) Estimated ending Operating Reserve balance is below the minimum Operating Reserve Target

(2) Estimated ending Operating Reserve balance exceeds maximum Operating Reserve Target due to SHC 22660 Project collections

7. METHOD OF ASSESSMENT

Each of the parcels within the Districts are deemed to receive special benefit from the improvements. Each parcel that has a special benefit conferred upon it as a result of the maintenance and operation of improvements are identified and the proportionate special benefit derived by each identified parcel is determined in relationship to the entire costs of the maintenance, operation and servicing of the improvements.

The method of assessment is based upon a formula that assigns the special benefits to each parcel, adjusted by parcel specific characteristics (i.e. units, lot size (acreage)). Generally, two methods of assessment have been used for the Districts. Within each District, benefits are assigned per parcel or per acre. The summaries of these formulas for each District are provided below.

Districts whose formula is set by dividing the net assessable amount by the number of assessable lots or parcels within the District are:

District	District
LMD No. 3 (River Ridge)	LMD No. 38 (Aldea Del Mar)
LMD No. 10 (Country Club Estates)	LMD No. 39 (Promesa/Sueno & DR Horton/Seawinds)
LMD No. 11 (St. Tropez)	LMD No. 40 (Cantada)

Districts whose formula is set by dividing the net assessable amount by the acres per assessable lot or parcel within the District are:

District	District
LMD No. 30 (Haas Automation)	LMD No. 43 (Greenbelt) Area 3- Tierra Vista
LMD No. 43 (Greenbelt) Area 1- Parc Rose	LMD No. 60 (Artisan)

7.1 Calculation of Maximum Assessment Rate

The following lists the cost of living inflation factors for the applicable Districts (as approved at formation of the District) that are applied to the maximum assessment rates. In January 2018, the Bureau of Labor Statistics updated their geographic areas for computing Consumer Price Index. The City declared its intention to use the Los Angeles-Long Beach-Anaheim CPI via Resolution No. 15,126.

District	FY 2025/26 Maximum Allowed Rate	Inflator as of Month [(1)(2)]	Applied Inflator for FY 2026/27	FY 2026/27 Maximum Allowed Rate
LMD No. 3 (River Ridge)	$162.86	None	N/A	$162.86
LMD No. 10 (Country Club Estates)	157.36	None	N/A	157.36
LMD No. 11 (St. Tropez)	84.22	None	N/A	84.22
LMD No. 12 (Standard Pacific)	87.82	None	N/A	87.82

LMD No. 49 (Cameron Ranch)	668.15	January	3.017%	688.30
LMD No. 50 (Pleasant Valley Senior Housing)	492.39	January	3.017%	507.25
LMD No. 51 (Pfeiler)	776.20	December	3.010%	799.57

District	FY 2025/26 Maximum Allowed Rate	Inflator as of Month [1][2]	Applied Inflator for FY 2026/27	FY 2026/27 Maximum Allowed Rate
LMD No. 52 (Wingfield)	$472.93	October	3.413%	$489.08
LMD No. 53 (Huff Court)	564.82	December	3.010%	581.83
LMD No. 54 (Meadowcrest Villas)	553.49	October	3.413%	572.38
LMD No. 55 (Wingfield West)	902.74	October	3.413%	933.55
LMD No. 58 (Westwind)	563.17	December	3.010%	580.12
LMD No. 60 (Artisan) [4]	74,413.63	November	3.209%	76,801.79

(1) The inflator is the Consumer Price Index – All Urban Consumers (CPI) for the Los Angeles-Long Beach-Anaheim CA region compared year over year as of the month listed in the table and beginning with the year listed in the original Engineer's Report. For years where the CPI is less than zero the inflation factor is zero.

(2) According to the Bureau of Labor and Statistics, the October 2025 CPI data is unavailable "due to the 2025 lapse in appropriations. As a result, the inflation factor for LMDs 52, 54, 55, is based on the October 2024 to November 2025 percentage change for the 2026/27 fiscal year only.

(3) LMD No. 43 (Greenbelt) FY 2026/27 Maximum Rates are per acre for Zone 1- Parc Rose and Zone 3- Tierra Vista.

(4) Per the original Engineer's Report for LMD No. 60, the inflator was established from the 2008 CPI which was two years behind, not the most recent prior year comparison. Therefore, the annual inflator is the change between the November 2023 and November 2024 change, rather than November 2024 and November 2025 change.

8. ASSESSMENT DIAGRAMS

Assessment Diagrams are set forth below. The lines and dimensions of each lot or parcel within the Districts are those lines and dimensions shown on the maps of the County Assessor of the County of Ventura, at the time this report was prepared, and are incorporated by reference herein and made part of this Engineer's Report.

9. ASSESSMENT ROLL

The proposed Assessment Roll for Fiscal Year 2026/27 is listed on the following pages. The following table summarizes the proposed Fiscal Year 2026/27 assessments for the Districts.

District	FY 2026/27 Maximum Allowed Rate	FY 2026/27 Levy Amount [3]	FY 2026/27 Proposed Rate [3]
LMD No. 3 (River Ridge)	$162.86	$84,035.76	$162.86
LMD No. 10 (Country Club Estates)	157.36	24,076.08	157.36
LMD No. 11 (St. Tropez)	84.22	6,990.26	84.22
LMD No. 12 (Standard Pacific)	87.82	20,282.70	79.54
LMD No. 13 (Le Village)	112.78	18,044.80	112.78
LMD No. 14 (California Cove)	173.08	36,692.96	173.08
LMD No. 16 (California Lighthouse)	73.78	19,551.70	73.78
LMD No. 23 (Greystone)	91.60	5,587.60	91.60
LMD No. 24 (Vineyards)	183.00	18,300.00	183.00
LMD No. 25 (The Pointe)	110.18	23,798.88	110.18
LMD No. 27 (Rose Island)	514.40	25,720.00	514.40

LMD No. 39 (DR Horton/Seawinds)	1,226.33	67,017.60	1,031.04
LMD No. 40 (Cantada)	917.47	43,170.52	382.04
LMD No. 41 (Pacific Cove)	783.51	34,108.80	284.24
LMD No. 42 (Cantabria & Coronado)	1,177.79	174,467.14	885.62
LMD No. 43 (Greenbelt)[1]	685.05	139,985.16	685.06
LMD No. 46 (Daily Ranch)[2]	986.91	258,572.84	986.92
LMD No. 47 (Sycamore Place)	787.20	87,379.20	787.20
LMD No. 49 (Cameron Ranch)	688.30	24,090.50	688.30
LMD No. 50 (Pleasant Valley Senior Housing)	507.25	5,800.80	96.68
LMD No. 51 (Pfeiler)	799.57	175,105.83	799.57
LMD No. 52 (Wingfield)	489.08	19,382.60	97.40
LMD No. 53 (Huff Court)	581.83	4,654.64	581.83
LMD No. 54 (Meadowcrest Villas)	572.38	1,842.00	36.84

District	FY 2026/27 Maximum Allowed Rate	FY 2026/27 Levy Amount [3]	FY 2026/27 Proposed Rate [3]
LMD No. 55 (Wingfield West)	$933.55	$36,972.98	$901.78
LMD No. 58 (Westwind)	580.12	42,906.24	275.04
LMD No. 60 (Artisan)	76,801.79	37,575.06	37,575.06
Total		**$2,435,029.89**	

(1) LMD No. 43 (Greenbelt) FY 2026/27 Maximum Rates are as follows: Zone 1- Parc Rose $1,857.29/acre, Zone 2- Solana II $427.04/unit, Zone 3- Tierra Vista $1,790.06/acre, Zone 4- Mayfield $340.94/unit. The FY 2026/27 Proposed Rates are as follows: Zone 1- Parc Rose $1,857.29/acre, Zone 2- Solana II $427.04/unit, Zone 3- Tierra Vista $1,790.06/acre, Zone 4- Mayfield $340.94/unit.

(2) LMD No. 46 (Daily Ranch) FY 2026/27 Maximum Rates are as follows: Area A- $1,029.95/unit, Area B- $996.45/unit, Area C- $889.91/unit. The City pays for the maintenance of the Area D improvements, which have been removed from the LMD. The FY 2026/27 Proposed Rates are as follows: Area A- $1,029.95/unit, Area B- $996.45/unit, Area C- $889.91/unit.

(3) The FY 2026/27 Levy Amount and Proposed Rate may differ slightly from the Assessment Roll and final applied levy amounts due to rounding per the Ventura County Tax Collector's requirement of even-cent assessment amounts.

10. APPENDICES

The following pages provide each appendix item previously referenced within this report.

10.1 Description of Boundaries of the Districts

Listed below are the Districts, along with their respective general locations and boundaries, based on the original diagrams and as confirmed and modified by the boundary audit.

District	General Location
LMD No. 3 (River Ridge)	The district generally consists of property north of W. Gonzales Road, east of N. Patterson Road, south of W. Vineyard Avenue, and west of Rhonda Street.
LMD No. 10 (Country Club Estates)	The district generally consists of property north of Carmen Way, along and east of River Ridge Road, south of W. Vineyard Avenue, and west of Ventura Road.
LMD No. 11 (St. Tropez)	The district generally consists of property along and north of Rosebud Drive, east of N. H Street, south of Violet Way, and along and west of Grapevine Drive.
LMD No. 12 (Standard Pacific)	The district generally consists of property along and north of Moraine Way, east of N. Patterson Road, south of W. Gonzales Road, and west of Joliet Place.
LMD No. 13 (Le Village)	The district generally consists of property north of W. Vineyard Avenue, east of N. Ventura Road, south of Stone Creek Drive, and along and west of Larkhaven Lane.
LMD No. 14 (California Cove)	The district generally consists of property north of Stone Creek Drive and along Upper Bay Drive, east and south of N. Ventura Road, and along and west of Honeysuckle Drive.
LMD No. 16 (California Lighthouse)	The district generally consists of property north of Ninth Street, east of S. Ventura Road, south of W. Seventh Street, and west of Kingfisher Way.
LMD No. 23 (Greystone)	The district generally consists of property along and north of Quail Run Way, east of Kentia Street, along and south of Timber Creek Trail, and west of N. H Street.
LMD No. 24 (Vineyards)	The district generally consists of property north of W. Vineyard Avenue, east of Kentia Street, south of Rosebud Drive, and west of N. H Street.
LMD No. 25 (The Pointe)	The district generally consists of property along and north of New Haven Place, east of S. Patterson Road, south of W. Fifth Street, and west of Saratoga Street.
LMD No. 27 (Rose Island)	The district generally consists of property north of Raiders Way, east of Dallas Drive, south of Channel Islands Boulevard, and west of Cota Drive.
LMD No. 28 (Harborside)	The district generally consists of property north of E. Gonzales Road, east of N. Oxnard Boulevard, along and south of Hermosa Way, and west of Indiana Drive.
LMD No. 30 (Haas Automation)	The district generally consists of property north of E. Fifth Street, east of S. Rice Avenue, south of Sturgis Road, and west of S. Del Norte Boulevard.
LMD No. 31 (Rancho De La Rosa)	The district generally consists of property north of Camino Del Sol, east of N. Juanita Avenue, south of Camino De La Luna, and west of N. Rose Avenue.

District	General Location
LMD No. 32 (Oak Park)	The district generally consists of property north of E. Gonzales Road, east of Entrada Drive, south of Caliente Way, and west of Indiana Drive.
LMD No. 33 (El Paseo)	The district generally consists of property north of Camino Del Sol, east of Kohala Street, south of Jacinto Drive, and west of Paseo Ortega.
LMD No. 34 (Sunrise Pointe & Sunset Cove)	The district generally consists of property north of Camino Del Sol, along and east of Festivo Street, south of Jacinto Drive, and west of Kohala Road and property north of Jacinto Drive, east of Kohala Road, along and east of Ocasa Place and along and west of Paseo Ortega.
LMD No. 36 (Villa Santa Cruz & Villa Carmel)	The district generally consists of property north of Camino De La Luna and Katrina Way, east of N. Juanita Avenue, south of Cesar Chavez Drive, and west of N. Rose Avenue.
LMD No. 37 (Pacific Breeze)	The district generally consists of property along and north of Mainsail Lane, east of Rialto Street, south of West Seventh Street, and west of S. Ventura Road.
LMD No. 38 (Aldea Del Mar)	The district generally consists of property north of Martin Luther King Jr. Drive, along and east of Limonero Place and Vacquero Circle, south of E. Gonzales Road, and west of Sonata Drive.
LMD No. 39 (Promesa/Sueno & DR Horton/Seawinds)	The district generally consists of property north of Morado Place, east of N. Oxnard Boulevard, south of Martin Luther King Jr. Drive and Ocotlan Way, and west of N. Juanita Avenue.
LMD No. 40 (Cantada)	The district generally consists of property north of Cesar Chavez Drive, east of N. Rose Avenue, south of Socorro Way, and west of Williams Drive.
LMD No. 41 (Pacific Cove)	The district generally consists of property north of E. Hueneme Road, east of Saviers Road, south of E. Clara Street, and along and west of Dunbar Drive.
LMD No. 42 (Cantabria & Coronado)	The district generally consists of property north of Cesar Chavez Drive, east of Sonata Drive and Teresa Street, south of E. Gonzales Road, and west of N. Rose Avenue.
LMD No. 43 (Greenbelt)	The district generally consists of property north of Cesar Chavez Drive, east of Williams Drive, south of Wankel Way, and west of Graves Avenue.
LMD No. 46 (Daily Ranch)	The district generally consists of property north of Camino Del Sol, east of Oxnard Boulevard, south of Morado Place, and west of Robert J. Frank Intermediate School.
LMD No. 47 (Sycamore Place)	The district generally consists of property north of E. Gonzales Road, east of Indiana Drive, south of Caliente Way, and west of Snow Avenue.
LMD No. 49 (Cameron Ranch)	The district generally consists of property north of Milagro Place, east of Gibralter Street, along and south of Ocaso Place, and west of Kohala Street.
LMD No. 50 (Pleasant Valley Senior Housing)	The district generally consists of property north of E. Pleasant Valley Road, east of Lemon Avenue, south and west of Butler Road.

District	General Location
LMD No. 51 (Pfeiler)	The district generally consists of property north of Cesar Chavez Drive, along and east of Fuente Drive, south of Martin Luther King Jr. Drive, and west of Pinata Drive.
LMD No. 52 (Wingfield)	The district generally consists of property along and north of Naples Road, along and east of Northport Lane, south of Dunkirk Drive, and west of S. Patterson Road.
LMD No. 53 (Huff Court)	The district generally consists of property north of Penny Way, east of Patricia Street, south of Firethorne Place, and west of Gina Drive.
LMD No. 54 (Meadowcrest Villas)	The district generally consists of property north of W. Robert Avenue, south and east of N. A Street, and west of N. Oxnard Boulevard.
LMD No. 55 (Wingfield West)	The district generally consists of property along and north of Dunkirk Road, east of Jolly Roger Way, south of W. Fifth Street, and west of Northport Lane.
LMD No. 58 (Westwind)	The district generally consists of property north of E. Clara Street, east of Columbus Place, south of Spruce Drive and Howell Road, and west of Cypress Road.
LMD No. 60 (Artisan)	The district generally consists of property north of Wankel Way, east of Williams Drive, south of Gonzales Road, and west of N. Lombard Street.

Please refer to Resolution 15,031 approved by City Council on June 20, 2017, for details related to the eighteen (18) additional districts previously dissolved. Further, please refer to Resolution 15,145 approved by City Council on June 5, 2018, for details related to the two (2) additional districts dissolved.

10.2 Description of Improvements by District

Listed below are the Districts along with a summary of their respective improvement descriptions.

District	District Improvements
LMD No. 3 (River Ridge)	Trees, shrubs, and ground cover
LMD No. 10 (Country Club Estates)	Trees, shrubs, and ground cover
LMD No. 11 (St. Tropez)	Trees, shrubs, and ground cover
LMD No. 12 (Standard Pacific)	Trees, shrubs, and ground cover
LMD No. 13 (Le Village)	Trees, shrubs, and ground cover
LMD No. 14 (California Cove)	Trees, shrubs, and ground cover
LMD No. 16 (California Lighthouse)	Trees, shrubs, and ground cover
LMD No. 23 (Greystone)	Trees, shrubs, and ground cover
LMD No. 24 (Vineyards)	Trees, shrubs, and ground cover
LMD No. 25 (The Pointe)	Trees, shrubs, and ground cover
LMD No. 27 (Rose Island)	Trees, shrubs, turf, sidewalks, screen walls/fencing, and ground cover
LMD No. 28 (Harborside)	Trees, shrubs, turf, sidewalks, sound and screen walls/fencing, and ground cover
LMD No. 30 (Haas Automation)	Trees, shrubs, turf, sidewalks, screen walls/fencing, and ground cover
LMD No. 31 (Rancho De La Rosa)	Trees, shrubs, turf, ornamental vegetation, parkways, sidewalks, sound and screen walls, mailboxes, and fences

LMD No. 33 (El Paseo)	Trees, shrubs, turf, sidewalks, sound and screen walls/fencing, ground cover, theme light poles, and detention basins
LMD No. 34 (Sunrise Pointe & Sunset Cove)	Trees, shrubs, turf, sidewalks, sound and screen walls/fencing, ground cover, and detention basin
LMD No. 36 (Villa Santa Cruz & Villa Carmel)	Trees, shrubs, turf, sidewalks, theme light poles, sound and screen walls/fencing, ground cover, and detention basin
LMD No. 37 (Pacific Breeze)	Trees, shrubs, turf, sidewalks, and ground cover
LMD No. 38 (Aldea Del Mar)	Trees, shrubs, turf, sidewalks, theme light poles, sound and screen walls/fencing, ground cover, and detention basins
LMD No. 39 (Promesa/Sueno & DR Horton/Seawinds)	Trees, shrubs, turf, sidewalks, theme light poles, screen walls/fencing, mailboxes, ground cover, and detention basins
LMD No. 40 (Cantada)	Trees, shrubs, turf, sidewalks, theme light poles, screen walls/fencing, ground cover, and detention basins
LMD No. 41 (Pacific Cove)	Trees, shrubs, turf, sidewalks, theme light poles, sign monuments, and ground cover
LMD No. 42 (Cantabria & Coronado)	Trees, shrubs, turf, sidewalks, theme light poles, screen walls/fencing, ground cover, and detention basin
LMD No. 43 (Greenbelt)	Trees, shrubs, turf, sidewalks, theme light poles, park benches, trash containers, overhead structures, screen walls/fencing, and ground cover

District	District Improvements
LMD No. 46 (Daily Ranch)	Trees, shrubs, turf, sidewalks, theme light poles, park benches, trash containers, overhead structures, screen walls/fencing, mailboxes, detention basins, ground cover and Promesa/Sueno Park amenities
LMD No. 47 (Sycamore Place)	Trees, shrubs, turf, sidewalks, theme light poles, screen walls/fencing, entry sign monuments, mailboxes, and ground cover
LMD No. 49 (Cameron Ranch)	Trees, shrubs, turf, sidewalks, theme light poles, screen walls/fencing, and ground cover
LMD No. 50 (Pleasant Valley Senior Housing)	Trees, shrubs, turf, sidewalks, screen walls/fencing, and ground cover
LMD No. 51 (Pfeiler)	Trees, shrubs, turf, sidewalks, theme light poles, screen walls/fencing, mailboxes, detention basins, ground cover and Pfeiler Park amenities
LMD No. 52 (Wingfield)	Trees, shrubs, turf, sidewalks, ornamental lighting, mailboxes, and ground cover
LMD No. 53 (Huff Court)	Trees, shrubs, turf, sidewalks, screen walls/fencing, mailboxes, and ground cover
LMD No. 54 (Meadowcrest Villas)	Trees, shrubs, turf, sidewalks, theme light poles, and ground cover
LMD No. 55 (Wingfield West)	Trees, shrubs, turf, sidewalks, theme light poles, mailboxes, and ground cover
LMD No. 58 (Westwind)	Trees, shrubs, turf, sidewalks, theme light poles, ground cover and Garden City Acres Park amenities
LMD No. 60 (Artisan)	Trees, shrubs, turf, sidewalks, theme light poles, park benches, trash containers, doggie bag sections, overhead structures, screen walls/fencing, and ground cover

10.3 Map of Improvements

The following maps show the general location of the improvements for each District. The improvements listed may not be exhaustive and are subject to modification, further improvement and/or removal.

10.4 Levels of Service

Pursuant to City Council approved Maintenance and Funding Policy for Landscape Maintenance Districts, the City Council has set Maintenance Service Levels 1 – 6 and the approximate frequency of the services associated with each Service Level as described below. The list of services is not exhaustive, and the services actually provided in a District during the year are based on the needs of the District (which may include, but are not limited to, unforeseeable needs due to weather events, infrastructure failures, unusual deaths of plantings, and the like) and are subject to budget limitations.

Maintenance Service Level	Frequency
Service Level 1	Intensive services – scheduled services provided more frequently than weekly
Service Level 2	52 service visits annually – weekly scheduled service
Service Level 3	26 service visits annually – every other week scheduled service
Service Level 4	12 service visits annually – once a month scheduled service
Service Level 5	6 service visits annually – once every other month scheduled service
Service Level 6	4 service visits annually – once a quarter scheduled service

AGREEMENT FOR BILLING OF DIRECT ASSESSMENTS

This Agreement For Billing of Direct Assessments ("Agreement") is made and entered into between the *Ventura County Auditor-Controller and* _____ ("Agency") to provide the service of placement of direct assessments on the Secured Tax Roll and distribution of collections to the ***Agency.***

I. PROPERTY TAX SERVICES

Ventura County will place direct assessments on the Secured Tax Roll and distribute collections to the ***Agency*** at the same time and in the same manner as Ventura County property taxes are collected and distributed, and as authorized by law. The ***Agency*** will adhere to the policies and procedures established by the Ventura County Auditor-Controller as outlined in the Direct Assessment Submission Letter.

II. FEES FOR SERVICES

For billing, collection, correction and administration of direct assessments, the Ventura County Auditor-Controller shall collect the following charges:

A. A Direct Assessment Line Fee for the original submission will be charged **$0.40** per assessment per parcel set by the County via resolution by the Board of Supervisors at its annual Countywide Rates and Fees public hearing.

B. For correction or removal of direct assessments requested by the ***Agency*** after extension of the tax roll, the Ventura County Auditor-Controller will collect **$30.00** per correction or removal. All corrections and removals must be submitted by the third Friday in February.

C. An administration and collection fee shall be charged in an amount not to exceed one-fourth of 1 percent of amounts collected.

D. Collection fees and charges herein provided are subject to adjustment by the County via resolution of the Board of Supervisors at its annual Countywide Rates and Fees public hearing. The Ventura County Auditor-Controller reserves the right to increase or decrease any charges herein provided, in proportion to any

changes in costs incurred by the Auditor-Controller in providing the services described herein, provided that written notice of any increase or decrease in charges is given to the ***Agency.***

III. COLLECTION OF AUDITOR-CONTROLLER FEES

Direct Assessment billing, correction and removal charges are deducted once a year, in the April Secured Apportionment. Collection and administrative fees are deducted from each Apportionment distribution.

IV. REQUESTS FOR INFORMATION AND ACCOUNTING SERVICES

The Ventura County Auditor-Controller publishes a report of direct assessments levied for the tax year by parcel to the Auditor-Controller's website in January, May and July. Requests for information and accounting services beyond what is posted to the Website will be considered extended services and will be subject to additional charges and fees.

V. AUTHORITY FOR LEVY AND COMPLIANCE WITH LAW

The authority for any levy, (i.e. resolution, ordinance or election), shall accompany requests for the levy of direct assessments. The ***Agency*** warrants that the taxes, fees, or assessments imposed by the ***Agency*** and collected pursuant to this Agreement comply with all requirements of state law, including but not limited to Articles XIIIC and XIIID of the California Constitution (Proposition 218).

The ***Agency*** hereby releases and forever discharges Ventura County and its officials, officers, agents, representatives and employees from any and all claims, demands, liabilities, costs and expenses, damages, causes of action, and judgments in any manner arising out of the ***Agency's*** responsibilities and representations under this Agreement or other action taken by the ***Agency*** in establishing a special tax, fee, or assessment and implementing collection of special taxes, fees, or assessments, as contemplated in and/or pursuant to this Agreement, including disputes related to lien priority.

The ***Agency*** further agrees to and shall defend, indemnify and hold harmless Ventura County and its officials, officers, agents, representatives and employees ("indemnified parties") from any and all claims, demands, liabilities, costs and expenses, damages, causes of action and judgments in any manner arising out of any of the ***Agency's*** responsibilities and representations under this Agreement, or other action taken by the ***Agency*** in establishing a special tax, fee, or assessment and implementing collection of special taxes, fees, or assessments as contemplated in and/or pursuant to this Agreement, including disputes related to lien priority.

If any judgment is entered against any indemnified party as a result of action taken to implement this Agreement, the ***Agency*** agrees that Ventura County may offset the amount of any judgment paid by any indemnified party from any monies collected by Ventura County on the ***Agency's*** behalf, including property taxes, special taxes, fees, or assessments. Ventura County may, but is not required to, notify the ***Agency*** of its intent to implement any offset authorized by this paragraph.

VI. TERMS OF AGREEMENT

Upon execution, this Agreement terminates, supersedes and replaces all prior agreements between Ventura County Auditor-Controller and the ***Agency*** pertaining to the collection of direct assessments. This Agreement shall continue from year to year and shall be subject to cancellation by either party by giving a thirty-day written notice of cancellation to the other party.

VII. AUTHORITY

The above terms are accepted by the ***Agency*** and the undersigned further certifies that he/she is authorized to sign this Agreement and bind the ***Agency*** to its terms.

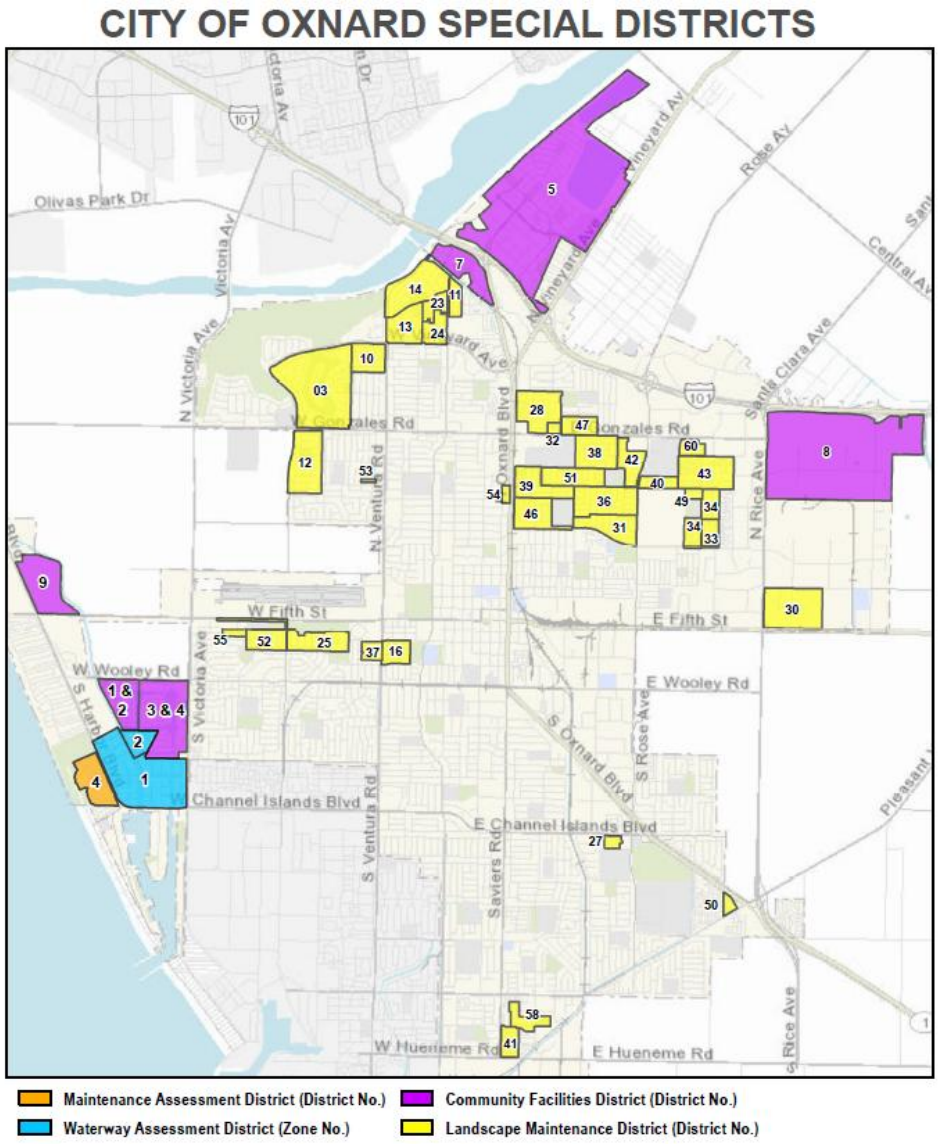
Adoption of Resolution Confirming Diagrams and Assessments for Fiscal Year 2026-27 in Connection with the City's Landscape Maintenance Districts.

City Council
June 16, 2026

Anthony Miller
Special Districts Manager



CITY OF OXNARD CALIFORNIA

That City Council, acting as the legislative body for the City's Landscape Maintenance Districts (LMDs):

1. Hold a public hearing to receive public testimony regarding the proposed Fiscal Year 2026-27 assessments in the City's LMDs; and

2. Adopt "A Resolution of the City Council of the City of Oxnard, California, Confirming Diagrams and Assessments for Fiscal Year 2026-27 in Connection with the City's Landscape Maintenance Districts."

MAP OF SPECIAL DISTRICTS IN THE CITY OF OXNARD

More information can be found at:

www.oxnard.gov/public-works/special-districts

- The Special Districts Division of the Public Works Department manages 50 Special Districts which includes 36 LMDs.

- The City has allowed property owners (i.e. developers) to use special financing districts (e.g. LMDs) to fund the annual cost of maintaining certain public improvements that benefit the properties within the district.

- Typically, the developer installed the public improvements at the time of development and benefiting property owners pay for the cost of maintaining the improvements (i.e., special benefit) through a special assessment included on the property's annual property tax bill.

- Proceeds of the assessments levied in each LMD fund the special benefit portion of the cost of maintaining and operating the improvements in that LMD.

- Assessments are levied annually and collected on the property tax roll. Each year per the Landscape and Lighting Act of 1972 (Streets & Highway Code 22500), the City Council must conduct proceedings to levy the real property assessments.

- Revenue received from the assessments partially funds the ongoing maintenance of public improvements provided by each district and, in some cases, is collected for future work that is conducted on a less than annual basis.

- In order to levy assessments in connection with the LMD's, each year, the City Council must adopt a number of resolutions that, among other things, approves an Engineer's Report describing the levy for the year and calls a public hearing on the assessment. Then, the Council must hold the public hearing.

- Following the hearing, the City Council approves a resolution that confirms the assessment and causes the assessment to be levied and collected on the property tax roll.

- The City Council cannot set the rate for the assessment in an LMD above the maximum rate approved by the property owners, as adjusted by a property-owner approved inflation adjustment formula.

- On June 1, 2026, the City Council adopted resolutions to initiate the annual proceedings for the FY 2026-27 real property assessment levy and approved the Report.

- The Report includes a description of the improvements within each district, the proposed service levels, the estimated annual expenses for each district, funding to be collected for improvement projects for each district, the method of assessment apportionment for each lot or parcel within each district's boundaries, and diagrams showing the parcels within each district.

- The proposed assessment rates were calculated after a careful and thorough analysis of each district's current financial status.

- The Report also separates and apportions the cost of General Benefit, as defined in the Report, other costs funded by a non-assessment fund (e.g. the General Fund), and the cost of Special Benefit to the benefiting properties, which is funded by the applied assessment rate.

- The actual services provided to each district varies from district to district and are based upon the property owner approved services and funding.

- The applied assessment rate is the amount needed to fund the services of each district and is the amount actually levied on the property tax roll.

- The applied assessment cannot exceed the maximum assessment rate that was approved by the property owners, through prior proceedings, for each district.

- After completing an individual analysis of each district's current level of service, anticipated estimated expenditures, fund balance, assigned reserve levels, and future work that is conducted on a less than annual basis, it is recommended to set the applied rates as set forth in the Report.

- Parcel specific detail of the proposed maximum and applied assessment is included in the Report as attached, is available from the City Clerk's office, and is accessible from the City's website (www.oxnard.gov).

- Costs considered to be of General Benefit are not allowed to be assessed to the properties and therefore are apportioned as a non-assessment fund expense.

- The General Fund is proposed to cover additional costs, which are outlined in the Fiscal Impact section of this Report.

- The proposed FY 2026-27 Operating Budget includes funds necessary to cover these costs.

- Funds received for the benefit of each district are restricted and can only be used within the district and for the purposes for which they were collected.

- Some district's applied assessment rates are proposed to increase from last year, while others are proposed to decrease.

- This is to account for changes in the expected amounts of services, such as, but not limited to landscape maintenance, sidewalk maintenance, removal and replacement of displaced sidewalks, irrigation repair, electrical systems repair, and lighting repair and replacement.

- Both increases and decreases can be attributed to changes in annual service costs to maintain fund balances after their use in prior fiscal years, to meet a district's obligation for staff and overhead expenses, or to maintain sufficient reserve levels in accordance with the City Council approved Maintenance and Funding Policy for Landscape Maintenance Districts.

- The assessment is levied at a rate that is no higher than the maximum assessment rate approved by property owners.

- All of the previous items are normal operating considerations of LMDs and are evaluated as a part of the annual assessment process.

- Two districts, LMDs 25 and 53, are receiving further attention in FY 2026-27 due to their projected end-of-year fund balances.

- LMD 25 (The Pointe) is projected to have an estimated negative fund balance of $426 at the end of FY 2026-27.
- LMD 53 (Huff Court) is projected to have an estimated negative fund balance of $2,017 at the end of FY 2026-27.
- Pursuant to the City Council adopted Maintenance and Funding Policy for Landscape Maintenance Districts, staff will be informing property owners within both districts of the steps that can be taken to address the projected shortfall and what options the district property owners have within the upcoming fiscal year.
- The deadline for delivering the Assessment information to Ventura County is July 6, 2026.

- For FY 2026-27, the proposed assessment calculations are as follows:
  - Real property assessments of $2,435,030 (rounded, see Engineer's Report Table 6.4),
  - Interest income of $60,927 (rounded, Table 6.3),
  - A general benefit contribution from the General Fund of $217,455 (rounded, Table 6.3), and
  - A subsidy from the General Fund for utility overages of $73,105 (rounded, Table 6.3).
- For information specific to individual Districts, please refer to the Consolidated Engineer's Report.

CITY COUNCIL AGENDA REPORT

REPORTS
AGENDA ITEM NO. N.1

DATE: June 16, 2026

TO: City Council

FROM: Javier Chagoyen-Lazaro, Chief Financial Officer, (805) 200-5400, javier.chagoyenlazaro@oxnard.org

SUBJECT: FY2026-27 Public Safety Property Tax Assessment.

RECOMMENDATION

That the City Council adopt a resolution establishing the FY 2026-27 tax rates on property in the City of Oxnard for the payment of voter-approved obligations related to public safety personnel pension expenses.

(This item did not originate in Committee.)

Please click the following link to view the required Measure M pre-recorded presentation video: https://youtu.be/SXxC94qiu0I

BACKGROUND

A special municipal election held on October 23, 1951, authorized the City to enroll its Fire and Police Safety employees in the California State Employees' Retirement System (later renamed the California Public Employees' Retirement System (CalPERS)), and obligated the City to pay the annual costs of participation in the retirement system. Each year, the City Council adopts a resolution establishing the annual tax rate on property in the City of Oxnard for the payment of voter-approved obligations, which is exempt from the one percent (1%) tax limitation established by Proposition 13. This tax is sometimes referred to as the "Carman Override" based upon the California Supreme Court case Carman v. Alvord in which the court ruled that voter approved pension costs constituted debt obligations that could be supported by a tax levy in excess of the 1% maximum allowed by Proposition 13. Only 24 out of 482 cities in California have access to this property tax override.

The City has two taxing districts, District I and District IV. District IV consists of property that in December 1969 was annexed to the City, but not into District I and accounts for less than one quarter of one percent of the City's property tax base. District I consists of all other parcels within the incorporated city boundaries. The City's tax rate for the voter-approved obligations only applies to District I. All future annexations into the City now also require annexation into Tax District I, such that any future annexed area would be subject to a tax levy for voter-approved indebtedness.

A 2002 court case in the City of Huntington Beach limited costs covered by the public safety property tax to the pension benefits in effect when Proposition 13 became effective - July 1, 1978. Costs for increased benefits granted after July 1, 1978, are excluded from the tax calculation.

The City engaged Foster & Foster, Inc., to complete an actuarial analysis and estimate the eligible CalPERS costs for FY 2026-27. Their analysis determined the eligible CalPERS costs related to Police and Fire employees' salaries that can be paid from the proceeds of the public safety property tax assessment for FY 2026-27 are an estimated $22,492,856. Total public safety retirement costs for FY 2026-27 are estimated at $31,262,117.

The tax rate is calculated each year based on forecasted expenditures, the available fund balance that can be utilized and the forecasted assessed property values. As a result of a City-initiated audit, the County Tax Collector began applying the

Public Safety Property Tax Assessment to Unitary properties within the tax district beginning in FY2020-21. The levy on these Unitary railroad and utility properties, which is collected by the State, helps to lower the assessment on the remaining local properties.
The estimated available fund balance for the Public Safety Retirement Fund (Fund 119) at June 30, 2026 is $4,284,365, which will be credited toward the required revenue in FY 2026-27 to produce a new net tax rate, calculated as follows:

Beginning fund available balance (Fund 119) at July 1, 2025	$ 3,004,442
Plus: estimated revenue received through June 30, 2026	$ 23,834,083
Less: estimated expenditures through June 30, 2026	$ (22,554,160)
Total estimated available fund balance at June 30, 2026	**$ 4,284,365**

Forecasted eligible public safety expenditures for FY 2026-27	$ 22,492,856
Plus: reserve for cash flow (one pay period expenses)	$ 865,110
Less: estimated available fund balance at June 30, 2026	$ (4,284,365)
Total assessment for FY 2026-27	**$ 19,073,601**
Less: estimated Unitary tax contribution	$ (9,499,867)
Total amount assessed on Oxnard property base for FY 2026-27	**$ 9,573,734**

Based upon projected taxable assessed value (AV) for FY 2026-27 of $28,995,612,697, and projected contributions of $9,499,867 from state-allocated unitary tax payments, the total tax rate required to generate $19,073,601 to contribute toward eligible Police and Fire retirement costs is $0.033018 per $100 of assessed value (AV.) As an example, for every $100,000 in assessed value, a property owner will pay $33.02. This assessment is 34.8% lower than the FY2025-26 assessment of $.050615 per $100, resulting in a decrease of $17.60 per $100,000 of assessed value. The decrease is primarily driven by a higher projected ending fund balance due to higher than anticipated unitary tax revenue received in FY2025-26 as well as a projected increase in unitary tax revenue of approximately $3.0 million per the forecast prepared by the City's property tax consultant. The maximum allowable tax rate for the Public Safety Pension Tax is $0.076637 per $100 of AV which would result in a payment of $76.64 for every $100,000 of AV.

The proposed budget for FY 2026-27 includes approximately 158 fire positions and 242 police positions covered under the voter-approved authorization.

STRATEGIC PRIORITIES

This agenda item is a routine operational item or does not relate to the five strategic priorities adopted by City Council on March 16, 2021.

FINANCIAL IMPACT

The total estimated retirement cost for FY 2026-27 for 400 public safety employees is $31.3 million, of which $22.5 million is the amount eligible to be levied through the Public Safety Retirement Tax assessment. After accounting for the estimated $4.3 million available fund balance at the end of June 2026 for the Public Safety Retirement Fund and reserve for cash flow of $0.9 million, the net amount assessed or levied for FY 2026-27 is $19.1 million, of which, $9.5 million is estimated to be collected through unitary taxes, leaving $9.6 million to be collected from the local tax base, resulting in a net tax rate of $0.033018 per $100 of assessed value. The remaining public safety retirement cost of $8.8 million is budgeted in other operating funds for FY 2026-27, primarily the General Fund.

COMMITTEE OUTCOME

This item did not originate in Committee.

RESOLUTION NO._____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD ESTABLISHING THE FISCAL YEAR 2026-27 PROPERTY TAX RATE FOR VOTER APPROVED OBLIGATIONS

WHEREAS, Section 2237.2 of the Revenue and Taxation Code requires that within 90 days of the end of the fiscal year, the City report to the County Controller the tax rate and total revenues expected to be generated in the current fiscal year for voter approved obligations; and

WHEREAS, the City's adopted budget for the Fiscal Year 2026-27 appropriates monies required to pay voter approved obligations of the City; and

WHEREAS, the total assessed valuation for Fiscal Year 2026-27 was estimated based on Ventura County Auditor-Controller provided assessed valuation of City tax districts for tax rate purposes.

NOW, THEREFORE, the City Council of the City of Oxnard hereby determines and resolves that the following amounts of revenue from property taxes are required for the current fiscal year to pay the City's obligation for public safety retirement expenditures:

Total Property Taxes from Required FY 2026-27 Tax Rates on Projected Secured and Unsecured Assessed Values	$19,073,601

The City Council of the City of Oxnard further resolves that for the purpose of raising such revenue the rates of taxation for the different portions of the City are hereby fixed and taxes are hereby levied on the taxable property in the City for the fiscal year beginning July 1, 2026, in the number of dollars upon each one hundred dollars of the assessed value of the property as assessed by the County Assessor and equalized by the Board of Equalization of the County of Ventura as set forth in the following table. The taxes levied upon property in each portion of the City hereinafter described and designated by a tax district number is at the rate set in the column headed by the tax district number which is prefixed to the description of such portion of the City as hereinafter stated.

TAX DISTRICT I

All territory included within the boundaries of the City, as originally incorporated, and all territory annexed to the City by action of the City Council by annexation proceedings, excepting there-from Annexation No. 69-9.

TAX DISTRICT IV

All territory annexed to the City by action of the City Council as described in Ordinance No. 1255, adopted November 12, 1969, to become effective December 12, 1969, known and referred to as Annexation No. 69-9 (Rancho La Ribera).

	DISTRICT I	DISTRICT IV
Public Safety Retirement Fund Tax Rate Required (Per $100 Assessed Value)	0.033018	-0-
Total Tax District Tax Rates (Per $100 Assessed Value)	0.033018	-0-

The City Council of the City of Oxnard further resolves that the foregoing tax rate is determined to be necessary to provide revenues required for the stated purpose during the period specified; that the City Council does hereby levy this sum on the property in such tax districts for Fiscal Year 2026-27; that in accordance with Government Code Section 36936.1, the City Clerk is instructed to cause this resolution to be published one time in the newspaper within 15 days after adoption; and that the City Clerk is instructed to transmit immediately to the County Auditor a certified copy of this resolution.

Public Safety Property Tax Assessment for FY2026-27 (Carman Override)

Annual resolution setting the tax rate on property in the City of Oxnard for the payment of voter-approved obligations related to public safety personnel pension expenses

City Council Meeting

Jim Costello, Administrative Services Analyst
June 16, 2026

CITY OF OXNARD CALIFORNIA

RECOMMENDATION

That City Council adopt a resolution establishing the Fiscal Year 2026-27 tax rates on property in the City of Oxnard for the payment of voter-approved obligations related to eligible public safety personnel pension expenses

Public Safety Property Tax - Background

- Public safety pension cost obligation authorized by voters in 1951
- Applies only to public safety pension benefits that were in effect on July 1, 1978
- Capped at the rate that was in effect in 1983-84 ($0.076637 per $100 of assessed value)
- Third-party actuarial analysis performed annually to determine eligible costs
- The proposed budget for FY 2026-27 includes approximately 158 fire positions and 242 police positions
- Total estimated public safety CalPERS retirement costs for FY2026-27 are $31,262,117
- Estimated eligible public safety CalPERS retirement costs: $22,492,856

Public Safety Property Tax - Discussion

Factors used in determining required tax rate

Total projected assessed property value for FY2026-27	$28,995,612,697
Total projected eligible expenses for FY2026-27	$22,492,856
Less: Projected ending available fund balance (fund 119)	($4,284,365)
Add: Reserve for Cash Flow (one pay-period expenses)	$865,110
Total revenue required from assessments	$19,073,601
Less: Projected revenue from unitary properties*	($9,499,867)
Revenue required from assessed properties	$9,573,734
Tax rate needed to meet required revenue	**$0.033018 per $100**

Unitary property - Definition

*Unitary property is property in the City that is owned by railroads and utilities that is taxed at the state level and allocated back to the cities and counties. The City began receiving Public Safety Pension tax payments on unitary property from the County Auditor-Controller's Office in FY2020-21 resulting in lower assessments on the remaining City properties.

RECOMMENDATION

That City Council adopt a resolution establishing the Fiscal Year 2026-27 tax rates on property in the City of Oxnard for the payment of voter-approved obligations related to public safety personnel pension expenses

CITY COUNCIL AGENDA REPORT

REPORTS
AGENDA ITEM NO. N.2

DATE: June 16, 2026

TO: City Council

FROM: Brenda Lopez, Housing Director, (805) 385-8092, brenda.lopez@oxnard.org

SUBJECT: Authorize the Assessment and Collection of Fees within the Oxnard Downtown Management District for Fiscal Year 2026-27.

RECOMMENDATION

That the City Council adopt a resolution authorizing the assessment and collection of fees within the Oxnard Downtown Management District for Fiscal Year 2026-27.

(This item did not originate in Committee.)

Please click the following link to view the required Measure M pre-recorded presentation video: https://youtu.be/3yZO-sCsWOI

BACKGROUND

The Property and Business Improvement District Law of 1994, Part 7 of Division 18 of the California Streets and Highways Code, commencing with Section 36600 (the "Law"), authorizes cities to establish property and business improvement districts (the "PBIDs") to promote enhanced economic revitalization and physical maintenance of these commercial districts. The Law authorizes cities to assess and collect fees on real property within such districts for the purpose of making improvements and promoting activities that specifically benefit real property within such districts.

The Oxnard Downtown Management District (the "District") was originally formed in 2001 and has continually been re-renewed with the most recent renewal of the Management District Plan taking place on July 2, 2024, for a five-year period (FY 2024-25 through FY 2028-29). The Plan is set to expire on December 31, 2029. The District boundaries cover 32 blocks, encompassing 432 parcels. Of those 432 parcels, 153 of those parcels are owned by the City of Oxnard, Oxnard Housing Authority, and the Oxnard Parking Authority. While the City parcels make up approximately 35% of the total parcel count, the City's contribution to the assessment is approximately 27% of the total District assessment. A copy of the latest District Map is attached to this report (Attachment 2). Staff reports related to the renewal of the District in 2024 are attached to this report (Attachment 3).

As part of the 2024 renewal, the City Council approved a five-year Management District Plan ("Plan") (Attachment 4). As stated in the Plan, the PBID is a unique benefit assessment district that enables the District property/business owners and residents, working as a unit, to continue to fund needed property and business-related services, programs and improvement projects above what can, and is, provided by the City of Oxnard, such as enhanced maintenance and security, business development, beautification and related management. The Plan outlines the methodology used to generate the assessments and outlines how the revenue will support enhanced services in the District.

Annually, the City Council adopts a resolution approving the assessment and collection of fees on real property within the District. The District is managed by the Downtown Oxnard Improvement Association ("DOIA"), a California nonprofit public benefit corporation. On May 4, 2021, the City of Oxnard entered into a Management and Disbursement Agreement

("Agreement") with DOIA. The Agreement sets forth the terms and conditions by which DOIA and the City successfully implement the District.

DISCUSSION

Using the formula identified in the City Council approved Management District Plan, the assessment will generate $622,185.14 in revenue for the District. Based on the assessment, $446,402.28 will be charged to private owners and $175,782.86 to public agencies (City of Oxnard and County of Ventura). A copy of the Assessment Roll for private owners is attached to this report (Attachment 5). A copy of the Assessment Roll for City-owned properties is also provided (Attachment 6). The amounts to be levied represent a 3% increase over the prior fiscal year, as allowed by the Management District Plan and recommended by the Downtown Oxnard Improvement Association Board of Directors on May 12, 2026. The assessments will support the three core programs identified in the Management District Plan, which are: Civil Sidewalks, District Identity/Placemaking and Administration.

The Civil Sidewalks Program supports enhanced street, sidewalk, alley and parking lot cleaning, along with enhanced public safety primarily through private security patrols. The District Identity and Placemaking Program supports the promotion and marketing of events, installation of holiday displays and public art and the maintenance of sidewalk planters. The Administration Program provides the funding necessary to pay for the staff needed to manage the District's day-to-day operations, which includes managing programs and budgets, preparing reports, hosting networking events and conducting merchant visits.

STRATEGIC PRIORITIES

This agenda item supports Economic Development strategy. The purpose of the Economic Development strategy is to focus on the retention and expansion of Oxnard businesses by increasing the skills and employability of our local workforce, invite new business investments, and target site-based redevelopment opportunities.

This agenda item supports the Quality of Life strategy. The purpose of the Quality of Life strategy is to restore and increase quality services and programs that enrich Oxnard's diverse community, promote safe neighborhoods, encourage community engagement, and support our residents in their efforts to improve their quality of life.

This agenda item supports Public Safety strategy. The purpose of the Public Safety strategy is to restore and modernize the delivery of public safety services to provide for the safety of our neighborhoods and health of our community.

FINANCIAL IMPACT

The district assessments are collected by the County of Ventura with the property tax billing. The County returns the assessment funds to the City, who then remits them to the DOIA. Public agencies that are not issued a property tax bill will receive a handbill directly from DOIA. All assessments received are accounted for in a specific fiduciary fund, 561 Oxnard Downtown Management District Fund.

The City will be responsible for properties owned by the City, Housing Authority, and Parking Authority. The City's 2026-27 PBID Assessment is approximately $167,856.86, which is included in the proposed FY 2026-27 budget.

For Finance Use Only: General Fund (Org. 1014104 Obj. 57410)

COMMITTEE OUTCOME

This item did not originate in Committee because it is a continuation of an item previously approved by City Council.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY OF OXNARD APPROVING THE LEVY AND COLLECTION OF ASSESSMENTS FOR FISCAL YEAR 2026-27 WITHIN THE OXNARD DOWNTOWN MANAGEMENT DISTRICT, PURSUANT TO THE PROPERTY AND BUSINESS IMPROVEMENT DISTRICT LAW OF 1994, PART 7 OF DIVISION 18 OF THE CALIFORNIA STREETS AND HIGHWAYS CODE

WHEREAS, the Property and Business Improvement District Law of 1994, Part 7 of Division 18 of the California Streets and Highways Code, commencing with Section 36600 (the "Law"), authorizes cities to establish property and business improvement districts ("PBIDs") within business districts to promote the economic revitalization and physical maintenance of such districts; and

WHEREAS, the Law authorizes cities to levy and collect assessments on real property within such districts for the purpose of providing improvements and promoting activities that specially benefit real property within such districts; and

WHEREAS, on July 2, 2024, the Oxnard City Council re-established for a five-year period the PBID named the Oxnard Downtown Management District (the "District"); and

WHEREAS, it is necessary for the City Council to adopt a resolution to levy and collect assessments in the District for each of the five years.

NOW, THEREFORE, the City Council of the City of Oxnard resolves:

Section 1. The levy and collection of assessments against lots and parcels of real property within the District for Fiscal Year 2026-27 is ordered as shown on Exhibit "A," attached hereto and incorporated herein by reference.

Section 2. The proposed improvements and activities for the District include providing additional street, sidewalk, alley and parking lot cleaning and other municipal services supplemental to those normally provided by the City; promotions and marketing; expansion of thematic physical amenities throughout Downtown and other improvements and activities which benefit businesses and real property located in the District.

Section 3. The assessment to be levied and collected for Fiscal Year 2026-27 is $622,185.14, which reflects a rate increase of 3% over the previous Fiscal Year. Of the total assessments to be levied, $446,402.28 is to be charged to private owners and $175,782.86 to public agencies. In accordance with the Management District Plan, the amount to be levied and collected for each fiscal year may be increased by an amount not to exceed 5% per year. There is a 3% increase in the assessment for the Fiscal Year 2026-27.

Section 4. The City of Oxnard Chief Financial Officer is hereby authorized to request County of Ventura to collect assessments for the District for Fiscal Year 2026-27.

Section 5. The City Clerk is hereby authorized and directed to transmit a certified copy of the Resolution and the Report attached to Management District Plan to the Ventura County Auditor, as may be required to place said assessment on the secured property tax roll for the Fiscal Year 2026-27.

CITY OF OXNARD CALIFORNIA

CITY COUNCIL AGENDA REPORT

REPORTS
AGENDA ITEM NO. K.5

DATE: April 30, 2024

TO: City Council

FROM: Emilio Ramirez, Housing Director, (805) 385-8094, emilio.ramirez@oxnard.org

SUBJECT: Renewal and Expansion of the Oxnard Downtown Management District. (10 Minutes)

RECOMMENDATION

That the City Council Adopt a Resolution of Intent to:

1. Renew and expand the Oxnard Downtown Management District (ODMD), located in downtown Oxnard, the boundaries of which are approximately 1st Street on the north, the railroad tracks and Oxnard Boulevard on the east, 8th Street on the south, and C Street on the west;

2. Levy and collect assessments therein in the amount of $572,250 in fiscal year 2024-25; and

3. Hold a public hearing on July 2, 2024 on said renewal and levy of assessments.

(This item did not originate in Committee.)

Please click the following link to view the required Measure M pre-recorded presentation video: https://youtu.be/6tHhnojpVZo

BACKGROUND

In May 2001, the City Council established the Oxnard Downtown Management District ("ODMD"), a property-based business improvement district (“PBID”) for a five-year period, which is the maximum term permitted by the laws of the State of California at the time. The PBID was renewed and expanded in 2006 for another five-year term; renewed again in 2011 for an additional three-year term and renewed again for five-year terms in 2014 and 2019. The PBID expires at the end of this calendar year. Unless renewed, the PBID will cease to exist and to levy any further assessments.

DISCUSSION

Since last fall, a PBID Renewal Committee consisting of downtown property and business owners has been meeting to formulate the details of a PBID renewal. The Committee has determined to propose a five-year PBID renewal period. Note that the maximum period permitted is ten-years. The Committee proposes a 2024 annual budget of approximately $572,250, an increase to the current $512,000 assement, to continue enhanced maintenance, enhanced security, business development, beautification, and related management services. The Committee further proposes to expand the PBID boundaries.

The proposed expanded PBID boundary includes approximately a thirty-five-block area bounded roughly by 1st Street on the north, the railroad tracks on the east, 8th Street on the south and C Street on the west. Note that ODMD proposes to expand north to 1st Street from the centerline of B Street to Oxnard Boulevard. This two-block area includes a combination of commercial parcels associated with downtown Oxnard and mixed-use parcels including residential rental units. (Please refer to the map included in Attachment G)

PBID Proposal

Under the PBID renewal proposal, the City of Oxnard, Housing Authority of the City of Oxnard and the Parking Authority would be assessed $156,052.78, which will be combined with the PBID assessment funding of $416,197.22 from the remaining properties within the proposed renewed and expanded district boundary. The total assessment funds of $572,250 are proposed to be allocated as follows during the first renewal year.

1. Civil Sidewalks: $335,000 (58.5%) - Civil Sidewalks includes maintenance and safety services in public sidewalk areas adjacent to assessed parcels in ODMD. Services include litter pickup and illegal dumping removal, graffiti abatement, trash enclosures cleaning, sidewalk sweeping and pressure washing, gardening, weed removal, visitor assistance, daily security patrols, loitering & trespassing subject removal, and homeless outreach.

2. District Identity and Placemaking: $83,250 (14.5%) - Activities and programs that market and promote positive aspects of downtown Oxnard. This work plan category also includes placement of, and care for, a variety of physical improvements and amenities within the public areas for the special benefit of each identified and assessed property within ODMD by creating a unique and marketable “sense of place”. The District Identity and Placemaking work plan component includes a website, social media management, newsletters, advertising, media relations, special events, sidewalk flower planters, public art displays, holiday streetlamp décor, and street banners.

3. Organizational Development: $154,000 (27%) - This work plan category includes professional management and related corporate operation costs of providing PBID funded services, programs and improvements for the special benefit of each identified and assessed property within ODMD. Organizational Development also includes legal, accounting, insurance, facilitation of board meetings and development, Brown Act compliance, outreach to ODMD property and business owners. The Organizational Development work plan component exists only for the purposes of ODMD and directly relates to the implementation of Civil Sidewalks and District Identity and Placemaking services, programs and improvements which benefit each identified assessed property within the proposed boundaries.

Process for District Renewal

The steps to renew a PBID are similar to the initial establishment in 2001. Section 36600 et seq of the California Streets and Highways Code allows for the formation and renewal of PBIDs and requires a two-step approval process that begins with a petition to gather support from owners who represent more than fifty-percent of the assessment proposed to be levied. This has been accomplished, with collected petitions exceeding fifty-percent of the total assessment to be levied on privately and publicly owned properties. Once this is complete, the City has the option to adopt Resolution of Intention to Renew and Expand the PBID (the subject action).

The second step, the ballot phase, is initiated only if the City Council adopts a Resolution of Intention to Renew and Expand the PBID. This adoption authorizes the City Clerk to mail a ballot for the renewal of the district to each property owner within the proposed boundaries and to set a date for a public hearing to count the ballots. For more information regarding the renewal, use the following link to access a video prepared by ODMD (https://www.youtube.com/watch?v=mi9bwAPiATY).

In order for the District to be renewed, a weighted majority of the ballots returned must be in favor of renewal. The City Council may then renew the district by adopting a Resolution to Renew and Expand the PBID.

An informational packet will be mailed prior to May 17, 2024, to the property owners within the proposed district boundary. The packet will include a ballot to be returned to the City Clerk’s Office by the close of the public input period of the public hearing on July 2, 2024.

STRATEGIC PRIORITIES

This agenda item supports Economic Development strategy. The purpose of Economic Development strategy is to focus on the retention and expansion of Oxnard businesses by increasing the skills and employability of our local workforce, invite new business investments, and target site-based redevelopment opportunities.

FINANCIAL IMPACT

There are no financial impacts associated with the recommended action. However, there will be a financial impact in the form of assessments levied on City and City related properties at such a time that the district is renewed, to be determined by City Council action on July 2, 2024 during a public hearing. If approved, the city's portion of the assessments is expected to increase by approximately $3,000 per year. The estimated amount of assessment to the City of Oxnard is $156,052.78 for fiscal year 2024-2025. The ODMD assessments may increase up to 5% per year for each individual parcel each year during the 5-year effective. Any increase in assessments or proposed action must be approved by the Owners' Association Board of Directors, of which the City is a member, and adopted by the City Council.

The district assessments are collected by the County of Ventura with the property tax billing. The County returns the assessment funds to the City, who then remits them to the ODMD.

COMMITTEE OUTCOME

This item did not originate in Committee.

CITY OF OXNARD CALIFORNIA

CITY COUNCIL AGENDA REPORT

INFORMATION/CONSENT AGENDA
AGENDA ITEM NO. J.4

DATE: July 2, 2024

TO: City Council, Parking Authority, and Oxnard Housing Authority

FROM: Emilio Ramirez, Housing Director, (805) 385-8094, emilio.ramirez@oxnard.org

SUBJECT: Oxnard Downtown Management District Ballot.

RECOMMENDATION

That the City Council and Parking Authority:

Authorize the City Manager, or his designee, to sign, on behalf of the City of Oxnard and Parking Authority, as owners of certain properties located in the Oxnard Downtown Management District ("District"), a ballot in support of the District renewal.

That the Oxnard Housing Authority Board of Commissioners:

Authorize the Executive Director, or his designee, to sign, on behalf of the Housing Authority, as owners of certain properties located in the Oxnard Downtown Management District, a ballot in support of the District renewal.

(This item did not originate in Committee.)

BACKGROUND

On April 30, 2024, the City Council adopted a Resolution of Intent (Resolution No. 15,773) to renew the District for an additional five-year period (January 1, 2025, through December 31, 2029), expand the District, levy and collect assessments therein, and to hold a public hearing on July 2, 2024.

A ballot and informational packet for the renewal of the District was mailed to the property owners within the proposed District boundaries. At the July 2, 2024, public hearing, the City Council will receive public testimony on the renewal of the District and the proposed assessments. The City Clerk will open and count the ballots received at the conclusion of the Public Hearing. In order for the district to be renewed, a weighted majority of ballots received must be in favor of the District renewal.

The City of Oxnard (City), Housing Authority, and Parking Authority are all owners of property within the District. The ballot requests property owners to vote for or against the renewal of the District. The City Manager and Executive Director of the Housing Authority, must be directed to sign the ballot (with either a "Yes" or "No" vote) before the July 2, 2024 public hearing is opened on the District renewal.

The funds levied by the District are critical to the continued revitalization of downtown Oxnard, as they support critical services that not only improve safety and cleanliness but also promote positive activities and events in downtown. Therefore, Staff recommends that the City Council, Parking Authority and Board of Commissioners authorize the City Manager and Executive Director to sign ballots in support of the District renewal.

STRATEGIC PRIORITIES

This agenda item supports Economic Development strategy. The purpose of Economic Development strategy is to focus on the retention and expansion of Oxnard businesses by increasing the skills and employability of our local workforce, invite new business investments, and target site-based redevelopment opportunities.

This agenda item supports the Quality of Life strategy. The purpose of the Quality of Life strategy is to restore and increase quality services and programs that enrich Oxnard's diverse community, promotes safe neighborhoods, encourages community engagement, and supports our residents in their efforts to improve their quality of life.

FINANCIAL IMPACT

If the District is renewed, the City will be responsible for paying an annual assessment each year during the five-year term of the renewal. The City, Housing, and Parking Authorities' cumulative assessment for the first year of the renewed District will be $156,052.78 and may be increased by five percent (5%) per year.

In the City of Oxnard's adopted 2024-2025 budget, General Funds were approved to support the first year's assessment. Ongoing assessment payments will be requested annually as part of the City's budget process.

COMMITTEE OUTCOME

Appendix 2: Map of ODMD

Attachment 1: Certified Assessment Engineer's Report

I. MANAGEMENT DISTRICT PLAN SUMMARY

The Oxnard Downtown Management District is a property-based Business Improvement District (PBID) being renewed for a 5 year period by a consortium of business and property owners within Downtown Oxnard. The District was originally formed in 2001 for a 5 year period. It was renewed and expanded in 2006 for another 5 year term, renewed for a 3 year term in 2011 and renewed for 5 year terms in 2014 and 2019. The purpose of this District is to continue to provide and manage supplemental services and improvements for this important business center, including a civil sidewalks ("clean and safe") program, district identity and image enhancement and a program of installing and upgrading placemaking and physical amenities throughout the greater Downtown area. The PBID is a unique benefit assessment district that will enable the District property/business owners and residents, working as a unit, to continue to fund needed property and business related services, programs and improvement projects above what can and is provided by the City of Oxnard.

Name: The name of the PBID is the Oxnard Downtown Management District (ODMD).

Location: The PBID is located in the center of Oxnard and is bounded roughly by First and Second Streets on the north, the Railroad tracks on the east, Eighth Street on the south and C and D Streets on the west. There is one benefit zone (See attached map).

Zones: There is one benefit zone within the renewed ODMD.

Services: Civil Sidewalks, District Identity/Placemaking and Organization.

Finance: Benefit assessment of real property (432 parcels). No bonds shall be issued to fund ODMD programs.

Budget: PBID assessment revenue for Year 1 (2024-25) is projected to be $572,261. It is noted that the Assessment Engineer has determined that general benefits equate to 2.0% of the total adjusted PBID program costs of $583,940, or $11,679. (See attached Engineer's Report for more details on benefit costs). General benefit costs shall be derived from non-assessment revenue sources such as grants, program income, credits, interest, memberships and other sources.

Year 1 – 2025 PROPOSED BUDGET (ASSESSMENT REVENUES ONLY)

CIVIL SIDEWALKS	DISTRICT IDENTITY & PLACEMAKING	ORGANIZATION	TOTAL
$335,000	$82,000	$155,261	$572,261
58.5397%	14.3291%	27.1312%	100.000%

Benefits: "General Benefit" is defined as: "A benefit to properties in the area and in the surrounding community or benefit to the public in general resulting from the improvement, activity, or service to be provided by the assessment levied". "Special Benefit" as defined by the California State Constitution

means a distinct benefit over and above general benefits conferred on real property located in the ODMD or to the public at large.

Assessment Formula: There is one benefit zone in the ODMD. (A map showing the ODMD boundaries is shown on Appendix 2 attached to this Plan). Year 1 property assessment rates per parcel are as follows:

YEAR 1 –2024/25 Assessment Rates

BLDG ASSMT RATE ($/UNIT A)	LAND ASSMT RATE 1 ($/UNIT B-1)	LAND ASSMT RATE 2 ($/UNIT B-2)	FRONTAGE ASSMT RATE ($/UNIT C)
$0.1377	$397.80	$0.0306	$4.59

Assessment Formula Special Circumstances:

Lower Tier Residential Uses (1-6 residential units including residential condominiums): Assess only building area and at 50% of commercial building area rate with no assessment for land area or street frontage.

Upper Tier Residential Uses (7+ residential units): Assess building area, land area and street frontage, all at 50% of commercial rates.

Mixed-Use Parcels: Assess commercial portions of parcel at building area, land area and street frontage at commercial rates for parcel area covered by commercial uses. Assess residential portions based on the criteria above based on the "tier" (i.e. number of residential units).

Government/Non-Profit Owned and Occupied: Assess only for land area and street frontage at commercial rates with no assessment for building area.

Cap: Assessment increases are capped at a maximum of 5% per year, subject to approval by the ODMD Property Owner Association Board of Directors.

Renewal: PBID renewal is a two-step process. First, petitions signed by PBID property owners representing at least 50% of the total assessment to be levied must be secured. Second, property owners will be sent a ballot to vote on the PBID renewal. Returned ballots in support of the PBID renewal must outweigh those in opposition based on the amount of assessment to be levied.

Duration: The renewed ODMD will have a term of five (5) years. After five years, the petition and balloting process must be repeated in order to renew the ODMD and levy assessments again at that time.

II. PBID BOUNDARIES

Setting:

The proposed renewed ODMD is centrally located in the center of Oxnard and centered along A Street from First Street to Eighth Street. ODMD is bounded roughly by First and Second Streets on the north, the Railroad tracks on the east, Eighth Street on the south and C and D Streets on the west. There is one benefit zone within ODMD (See attached map in Appendix 2).

General Boundary Description

ODMD includes 433 parcels of which 432 are identified assessed parcels in a 32 block area of Historic Downtown Oxnard. The property uses within the boundaries of the proposed renewed ODMD which will receive special benefits from PBID funded programs and services are currently a unique mix of retail, restaurant, service, office, government, residential and parking. ODMD boundaries were selected to incorporate the core Downtown parcels and businesses. There is one benefit zone within the proposed renewed District. It is noted that ODMD is being expanded to the north to First Street from the centerline of B Street to Oxnard Boulevard. This two block area includes a combination of commercial parcels associated with Downtown Oxnard along with mixed use parcels with residential rental units.

Detailed Boundary Description

More specifically, the ODMD is described as follows:

> Beginning at the intersection of the centerlines of Second Street and D Street; thence east along said centerline of Second Street to the centerline of B Street; thence north along said centerline of B Street to the centerline of First Street; thence east along said centerline of First Street to the east property line of Oxnard Boulevard; thence south along said east property line of Oxnard Boulevard to the tangent intersection point with the west properly line of the railroad right of way; thence southeast and south along said west property line of the railroad right of way to the centerline of Fifth Street; thence west along said centerline of Fifth Street to the prolongation of the east property line of the public alley lying east of and parallel to Meta Street; thence south along said east properly line of said public alley to the centerline of Seventh Street; thence west along said centerline of Seventh Street to the east property line of parcel APN 202-0-360-110; thence south along said east property line of said parcel APN 202-0-360-110 to the south property line of said parcel APN 202-0-360-110; thence west along said south property line of said parcel APN 202-0-360-110 to the west property line of said parcel APN 202-0-360-110; thence north along said west property line of said parcel APN 202-0-360-110 to the centerline of Seventh Street; thence west along said centerline of Seventh Street to the centerline of Oxnard Boulevard; thence south along said centerline of Oxnard Boulevard to the centerline of Eighth Street; thence west along said centerline of Eighth Street to the centerline of D Street; thence north along said centerline of D Street to the centerline of Seventh Street; thence east along said centerline of Seventh Street to the prolongation of the west property line of the public

alley lying east of and parallel to D Street; thence north along said west property line of said public alley to the centerline of Third Street; thence west along said centerline of Third Street to the centerline of D Street; thence north along said centerline of D Street to the point of beginning.

Benefit Zones
There is one benefit zone within the proposed renewed District.

District Boundary Rationale
The ODMD boundaries encompass the heart of Downtown Oxnard. These parcels showcase a unique array of pedestrian oriented uses - retail, restaurant, service, office, government, residential and parking that form what is considered the "cohesive urban fabric" of the evolving mixed-use Downtown center.

The District boundaries were chosen to generally include parcels that comprise the commercial core that attracts pedestrians and visitors to Downtown Oxnard. Also included are current as well as future in-town residential parcels. Parcels adjacent to the north, south and east of ODMD are not part of the District's commercial and in-town residential pedestrian core and have different marketing needs than those in the ODMD. These outside parcels and uses require different services than those in the ODMD and would not specially benefit from the increased pedestrian oriented programs, services and improvements offered by the ODMD. Therefore, they have not been included within the ODMD boundaries.

Surrounding parcels to the north, south and west that are zoned solely residential and/or with residential uses have not been included within the boundaries of the PBID. The Property and Business Improvement District Law of 1994, California Streets & Highway Code § 36632 states, "Properties zoned solely for residential use…… are conclusively presumed not to benefit from the improvements and service funded through these assessments and shall not be subject to any assessment …..". For these reasons, no residentially zoned parcels or residential uses north, south or west of the proposed renewed District are included in the ODMD boundaries.

A list of all parcels included in the proposed renewed ODMD is shown as Appendix 1, attached to this Plan identified by their respective Ventura County assessor parcel number. The boundary of the proposed renewed ODMD is shown on the map of the proposed renewed ODMD attached as Appendix 2 to this Plan.

All identified assessed parcels within the above-described boundaries shall be assessed to fund supplemental special benefit programs, services and improvements as outlined in this Plan and in the Management District Plan. All ODMD funded services, programs and improvements provided within the above described boundaries shall confer special benefit to identified assessed parcels inside the District boundaries and none will be provided outside of the District. Each assessed parcel within ODMD will proportionately specially benefit from the District funded programs and services (i.e. civil sidewalks, district identity/placemaking and organization). These services, programs and improvements are intended to improve commerce, employment, livability, rents and occupancy rates and investment viability of individually assessed parcels and businesses/residential units on them within ODMD.

District services, activities and programs confer special benefits on each and every individually assessed parcel by deterring crime, improving aesthetics and marketing goods and services available from individually assessed parcels and the businesses/occupants on them within the District, all considered necessary in a competitive properly managed mixed-use business district. All District funded services programs and improvements are considered supplemental, above normal base level services provided by the City of Oxnard and are only provided for the special benefit of assessed parcels within the boundaries of the proposed renewed ODMD.

The District includes 433 parcels of which 432 are identified as assessable within one Benefit Zone and which are listed in the Assessment Roll included as Appendix 1. For further information, a District Boundary Map is included as Appendix 2.

III. Proposed 5 Year PBID Work Plan and Budget

Overview

The Programs and activities to be funded by the ODMD include civil sidewalks, district identity/placemaking and organization. The property uses within the boundaries of the District that will receive special benefits from District funded programs, services and improvements are currently a unique mix of retail, restaurant, service, office, government, residential and parking. District funded activities are primarily designed to provide special benefits as described below to identified assessed parcels and array of land uses within the boundaries of the District.

These benefits are particular and distinct to each and every identified assessed parcel within the ODMD and are not provided to non-assessed parcels outside of the District. These programs, services and improvements will only be provided to each individual assessed parcel within the District boundaries and, in turn, confer proportionate "special benefits" to each assessed parcel.

In the case of the ODMD, the very nature of the purpose of this District is to fund supplemental programs, services and improvements to assessed parcels within the District boundaries above and beyond what is being currently funded either via normal tax supported methods or other funding sources. The City of Oxnard does not provide these supplemental programs and services. All benefits derived from the assessments to be levied on assessed parcels within the District are for services, programs and improvements directly benefiting each individual assessed parcel within the District. No District funded services, activities or programs will be provided outside of the District boundaries.

The projected program special benefit cost allocation of the District assessment revenues for the 5-year District term assuming a 5% maximum annual assessment rate increase is shown in the Table on page 12 of this Plan.

WORK PLAN DETAILS

The programs, services and improvements to be provided by the ODMD include civil sidewalks, district identity/placemaking and organization. Each of these work plan elements are designed to add to the

cohesive mixed-use urban fabric of Downtown Oxnard and assist in its economic success and vitality. The assessed parcels in the PBID will specially benefit from the District programs in the form of increased commerce and vitality through meeting the ODMD goals: to improve security, cleanliness, beautification, landscaping, livability and to attract and retain businesses and services, generate more pedestrian and visitor traffic and to increase commerce and improve the economic viability of each assessed parcel.

The following programs, services and improvements are proposed by the ODMD to specially benefit each and every individually assessed parcel within the District boundaries. ODMD services, programs and improvements will not be provided to parcels outside the District boundary.

Civil Sidewalks

Civil Sidewalks includes maintenance and safety ("clean and safe") services in public sidewalk areas adjacent to assessed parcels in ODMD. The maintenance portion of the Civil Sidewalks category includes regular maintenance of public areas adjacent to each assessed parcel for the special benefit of each identified and assessed parcel and land use within ODMD. These services include:

- Clean Team 6-days per week
- litter and illegal dumping pickup
- graffiti and illegal sticker/poster removal
- check/empty 130+ sidewalk trash bins
- check, sweep, and secure trash enclosures
- removal of transient discards, including shopping carts, bio-waste
- sidewalk scrubbing/steam cleaning
- curb line block face sweeping
- tree pruning
- weed abatement
- visitor assistance

The maintenance portion of the Civil Sidewalks work plan component is designed to specially benefit and improve the aesthetic appeal of each identified and assessed parcel within the PBID and attract more customers, clients, employees, tenants and investors which potentially would increase business volumes, sales transactions, occupancies, rental income and attractiveness of investments. Maintenance services will only be provided for identified and assessed parcels located within the PBID boundaries.

The maintenance portion of the Civil Sidewalks work plan component will assist in creating a clean environment for each assessed parcel in the District. A dirty environment deters commerce and may fail to attract patrons, residents and visitors, and reduce rents and occupancies. For parcels with general commercial, retail, restaurant, office and commercial parking uses, this activity is designed to increase vehicular and pedestrian traffic, increase commerce and customer activity, attract and retain new business and patrons, and may increase commercial rents and commercial occupancies for the assessed parcels within

the BID boundaries. In the case of assessed publicly/non-profit owned/occupied parcels, District funded clean programs and services provide these parcels with enhanced facility entrances and perimeters and better public/non-profit facilities in turn for their employees, visitors, vendors and users of these public/non-profit facilities. Further, in the case of assessed residential use parcels, District funded clean programs and services are designed to improve the appearance of entrances and perimeters for the special benefit of each assessed residential parcel and in turn their tenants, visitors and owners, which, in turn, may increase occupancies and rental income. Each assessed parcel will specially benefit from the clean programs and services which will only be provided to, and for the direct special benefit of, each identified assessed parcel within the proposed renewed District boundaries.

Safety

The safety portion of the Civil Sidewalks work plan category includes regular security of areas adjacent to each assessed parcel for the special benefit of each identified and assessed parcel and land use within ODMD. The safety portion of the Civil Sidewalks work plan component includes:

- daily bike & truck Safety Patrol
- loitering & trespassing subject removal
- Crime prevention awareness campaigns
- street light outage reporting and repair orders

The safety portion of the Civil Sidewalks work plan component is designed to specially benefit and improve the security of each identified and assessed parcel within the PBID and attract more customers, clients, employees, tenants and investors which potentially would increase business volumes, sales transactions, occupancies, rental income and attractiveness of investments. Safety services will only be provided for identified and assessed parcels located within the proposed renewed PBID boundaries.

The safety portion of the Civil Sidewalks work plan component will assist in creating a safe and secure environment for each assessed parcel in the District. An unsafe environment deters commerce and may fail to attract patrons, residents and visitors, and reduce rents and occupancies. For parcels with general commercial, retail, restaurant, office and commercial parking uses, this activity is designed to increase vehicular and pedestrian traffic, increase commerce and customer activity, attract and retain new business and patrons, and may increase commercial rents and commercial occupancies for the assessed parcels within the BID boundaries. In the case of assessed publicly/non-profit owned/occupied parcels, District funded safe programs and services provide these parcels with safer and enhanced facility entrances and perimeters and better public/non-profit facilities in turn for their employees, visitors, vendors and users of these public/non-profit facilities. Further, in the case of assessed residential use parcels, District funded safe programs and services are designed to improve the security of entrances and perimeters for the special benefit of each assessed residential parcel and in turn their tenants, visitors and owners, which, in turn, may increase occupancies and rental income. Each assessed parcel will specially benefit from the safe programs and services which will only be provided to, and for the direct benefit of, each identified assessed parcel within the District boundaries

District Identity/Placemaking

This work plan category includes regular marketing and image enhancement programs and services for the special benefit of each assessed parcel and land use within ODMD by creating a unique, marketable District identity. This work plan category also includes placement of, and care for, a variety of physical improvements and amenities within the public streetscape areas within ODMD for the special benefit of each identified and assessed parcel and land use within ODMD by creating a unique and marketable "sense of place". The District Identity/Placemaking work plan component includes:

- daily updated responsive website DowntownOxnard.org
- integrated social media promotion – Facebook, Instagram, Twitter, YouTube
- produced and sponsored live events (e.g. First Thursdays, Cruise Night, Halloween, etc.)
- district advertising, newsletters, press releases, media relations, original photo library
- Marketing Committee support for merchant coordinated promotions
- assist prospective businesses with referrals to leasable properties
- permit processing assistance

Also included are:

- district-wide holiday streetlamp décor
- 162 sidewalk flower planters
- Historic Plaza Park hanging flower baskets
- public art – utility box painting and temporary murals
- street banner program (88 street poles)

The District Identity/Placemaking work plan component is designed to specially benefit and improve the image of each assessed parcel within the PBID and attract more customers, clients, employees, tenants, residents and investors which potentially would increase business volumes, sales transactions, occupancies, rental income and attractiveness of investments. District Identity/Placemaking programs and services will only be provided for identified and assessed parcels located within the PBID boundaries.

For parcels with general commercial, retail, restaurant, office and commercial parking uses, District Identity/Placemaking services and programs are specifically designed to attract more customers, employees, tenants and investors for the special benefit of assessed parcels as a result of marketing assessed parcels and the goods and services and spaces available on these assessed parcels. This in turn, is intended to increase business volumes, sales transactions, commercial occupancies, commercial rental income and investment return. In the case of publicly/non-profit owned/occupied parcels that are assessed for these programs, District Identity/Placemaking creates better public/non-profit facilities and services on these assessed parcels by fostering better informed public/non-profit employees, visitors, vendors and users of these public/non-profit facilities. Further, in the case of residential use parcels, District Identity/Placemaking specially benefits each assessed residential parcel and creates better informed tenants, visitors and owners, which, in turn, enhance livability and may increase residential occupancies and rental income. District Identity/Placemaking services and programs will only be provided to, and for the direct and special benefit of, each identified assessed parcel within the District.

Organization

This work plan category includes professional management and related corporate operation costs of providing PBID funded services, programs and improvements for the special benefit of each identified and assessed parcel and land use within ODMD. The Organization work plan component includes:

- staff and full service office to manage PBID programs, projects, compliance reporting.
- full service office to assist property and business owners with District-related needs
- advocacy and representation of member interests on District issues and needs
- Organize "town hall" forums and advocacy on topics such as homeless solutions, Vision Plan

Organization also includes legal, accounting, insurance, production of the Annual Planning Report and Budget and quarterly reports, facilitation of meetings of the Owners' Association, Brown Act compliance, outreach to District property and business owners, and participation in professional peer/best practice forums such as the California Downtown Association or the International Downtown Association. It also covers the costs associated with District renewal. A portion of the Organization budget is held in reserve to offset delinquent and/or slow assessment payments.

The Organization component is key to the proper expenditure of District assessment funds and the administration of District programs and activities for the special benefit of all parcels and land uses within the ODMD. The Organization work plan component exists only for the purposes of the District and directly relates to the implementation of Civil Sidewalks and District Identity/Placemaking services, programs and improvements which specially benefit each identified assessed parcel within the District boundaries.

In summary, all District funded services, programs and improvements described above confer proportionate special benefits to identified assessed parcels inside the District boundaries and none will be provided outside of the District. Each assessed parcel within the ODMD will proportionately specially benefit from Civil Sidewalks, District Identity/Placemaking and Organization. These services, programs and improvements are intended to improve commerce, employment, livability, rents, occupancy rates and investment viability of assessed parcels, businesses and residents within the ODMD by deterring crime, reducing litter and debris, making capital improvements and professionally marketing goods, services and spaces available within the District, all considered necessary in a competitive properly managed contemporary mixed-use business district. All District funded services programs and improvements are considered supplemental, above normal base level services provided by the City of Oxnard and are only provided for the special benefit of each and every assessed parcel within the boundaries of the ODMD.

WORK PLAN BUDGET

Each identified assessed parcel within the ODMD will be assessed the full amount of the proportionate special benefit conferred upon it based on the level of District funded services provided. The projected District program special benefit (assessment) cost allocation budget for Year 1 (2025), is shown in the following Table:

ODMD Year 1 (2025) Special Benefit Assessment Budget

CIVIL SIDEWALKS	DISTRICT IDENTITY & PLACEMAKING	ORGANIZATION	TOTAL
$335,000	$82,000	$155,261	$572,261
58.5397%	14.3291%	27.1312%	100.000%

In order to carry out the District programs outlined in the previous section, a Year 1 assessment budget of $572,261 is projected. Since the District is planned for a 5-year term, projected program costs for future years (Years 2-5) are set at the inception of the District. While future inflationary and other program cost increases are unknown at this point, a built in maximum increase of 5% per annum, commensurate to special benefits received by each assessed parcel, is incorporated into the projected program costs and assessment rates for the 5-year District term. It is noted that the 5% maximum annual rate increase is deemed necessary in order to offset substantial service and improvement cost increases projected over the next several years and to provide levels of service and types of improvements expected and requested by District stakeholders. Carryovers, if any, may be reapportioned the following year for related programs, services and improvements. Detailed annual budgets will be prepared by the Owner's Association Board and included in an Annual Plan for the City Council's review and approval.

It is recognized that market conditions may cause the cost of providing goods and services to fluctuate from year to year during the 5-year term of the proposed renewed District. Accordingly, the Owners' Association shall have the ability to reallocate budget line items within the budget categories based on such cost fluctuations subject to the review and approval by the Owners' Association Board and included in the Annual Planning Report that will be approved by the Oxnard City Council pursuant to Streets and Highways Code Section 36650. Any accrued interest or delinquent payments may be expended in any budget category. A 5-year projected ODMD budget is shown in the following Table:

YEAR 1-5 PROJECED DISTRICT ASSESSMENT BUDGET SUMMARY (Special Benefit Costs)
(Assumes 5% max rate increase per year)

YR	CIVIL SIDEWALKS	DISTRICT IDENTITY & PLACEMAKING	ORGANIZATION	TOTAL
	58.5397%	14.3291%	27.1312%	100.00%
1	$335,000	$82,000	$155,261	$572,261
2	$351,750	$86,100	$163,024	$600,874
3	$369,338	$90,405	$171,175	$630,918
4	$387,805	$94,925	$179,734	$662,464
5	$407,195	$99,671	$188,721	$695,587

The ODMD assessments may increase for each individual parcel each year during the 5-year effective operating period, but not to exceed 5% per year, commensurate to special benefits received by each assessed parcel, and must be approved by the Owners' Association Board of Directors, included in the Annual Planning Report and adopted by the City of Oxnard City Council. The Owners' Association Board of the Directors ("Property Owner's Association of the ODMD) shall determine the percentage increase to the annual assessment. The Owners' Association Executive Director shall communicate the annual increase to the City each year in which the District operates at a time determined in the Administration Contract held between the Owners' Association and the City of Oxnard.

No bonds are to be issued in conjunction with the proposed renewed District.

Pursuant to Section 36671 of the Streets and Highways Code, any funds remaining after the 5th year of operation will be rolled over into the renewal budget or returned to stakeholders. District assessment funds may be used to pay for costs related to the following District renewal term. If the District is not renewed or terminated for any reason, unexpended funds will be returned to the property owners.

Special/General Benefits

The Assessment Engineer (see attached Engineer's Report) has found that the general benefits (i.e. general benefits to assessed parcels within the District, the general public and surrounding parcels outside the ODMD) of the proposed programs, services and improvements (i.e. civil sidewalks, district identity/placemaking and organization) represent 2.0% of the total benefits generated and, in turn, 2.0% ($11,679) of the total adjusted costs of the ODMD funded improvements, activities and services provided.

Total Year 1 adjusted costs are estimated at $583,940. General benefits are factored at 2.0% of the total adjusted costs (see Finding 2 on pages 5-9 of the attached Engineer's Report) with special benefits set at 98.0%. Article XIIID Section 4(b) of the California Constitution limits the levy of property assessments to costs attributed to special benefits only. The 2.0% general benefit cost is computed to be $11,679 with a resultant 98.0% special benefit limit computed at $572,261. *Based on current property data and land uses, this is the maximum amount of Year 1 (2024-25) revenue that can be derived from property assessments from the subject District.*

All program costs associated with general benefits will be derived from sources other than District assessments. Sample "other" revenue sources are shown in the following Table:

Special and General Benefit Revenue Sources

Revenue Source	Revenue	% of Total
District Assessments	$572,261	98.0%
Grants, donations, sponsors, program income, etc.	$11,679	2.0%
TOTAL	**$583,940**	**100.0%**

A breakdown of projected special and general benefit costs for each year of the 5-year renewal term is shown in the following Table:

5 Year Special + General Benefit Costs

YR	PROGRAM CATEGORY	SPECIAL BENEFIT ASSESSMENT COSTS	GENERAL BENEFIT NON-ASSESSMENT COSTS	TOTAL ADJUSTED COSTS	% OF TOTAL
1	CIVIL SIDEWALKS	$335,000	$6,837	$341,837	58.5397%
	DISTRICT IDENTITY & PLACEMAKING	$82,000	$1,673	$83,673	14.3291%
	ORGANIZATION	$155,261	$3,169	$158,430	27.1312%
	Total	$572,261	$11,679	$583,940	100%
2	CIVIL SIDEWALKS	$351,750	$7,179	$358,929	58.5397%
	DISTRICT IDENTITY & PLACEMAKING	$86,100	$1,757	$87,857	14.3291%
	ORGANIZATION	$163,024	$3,327	$166,351	27.1312%
	Total	$600,874	$12,263	$613,137	100%
3	CIVIL SIDEWALKS	$369,338	$7,538	$376,876	58.5397%
	DISTRICT IDENTITY & PLACEMAKING	$90,405	$1,845	$92,250	14.3291%
	ORGANIZATION	$171,175	$3,493	$174,668	27.1312%
	Total	$630,918	$12,876	$643,794	100%
4	CIVIL SIDEWALKS	$387,805	$7,915	$395,720	58.5397%
	DISTRICT IDENTITY & PLACEMAKING	$94,925	$1,937	$96,862	14.3291%
	ORGANIZATION	$179,734	$3,668	$183,402	27.1312%
	Total	$662,464	$13,520	$675,984	100%
5	CIVIL SIDEWALKS	$407,195	$8,311	$415,506	58.5397%
	DISTRICT IDENTITY & PLACEMAKING	$99,671	$2,034	$101,705	14.3291%
	ORGANIZATION	$188,721	$3,851	$192,572	27.1312%
	Total	$695,587	$14,196	$709,783	100%

Duration

As allowed by State PBID Law, the District will have a five (5) year operational term from January 1, 2025 to December 31, 2029. The proposed renewed District operation is expected to begin services on January 1, 2025. If the District is not renewed, services will end on December 31, 2029.

Manner of Collection

Assessments for the Property Tax Year beginning July 1, 2024 and ending June 30, 2029, shall be collected at the same time and in the same manner as ad valorum taxes paid to the County of Ventura (Operation Years 2025-2029). The District assessments shall appear as a separate line item on the property tax bills issued by the Ventura County Assessor. The City of Oxnard is authorized to collect any assessments not placed on the County tax rolls, or to place assessments, unpaid delinquent assessments, or penalties on the County tax rolls as appropriate to implement this Management District Plan.

IV PROPOSED ASSESSMENT FORMULA

The PBID programs and services described in this Management District Plan will be funded through benefit assessments against real property in the PBID and non-assessment revenues to fund the costs associated with general benefits conferred on assessed parcels within the District, the public at large and surrounding parcels outside of the ODMD boundaries. The assessment formula has been developed by the Assessment Engineer to ensure that no parcel will be assessed an amount that exceeds the cost of the proportional special benefit that parcel derives from the programs, services and improvements to be funded by the proposed benefit assessments. The assessment rates are based on the anticipated special benefit to be conferred on each assessed parcel within the boundary of the ODMD.

Based on the specific needs and corresponding nature of the program activities to be funded by the proposed renewed ODMD (i.e. civil sidewalks, district identity/placemaking and organization) it is the opinion of the Assessment Engineer that the assessment factors on which to base assessment rates relate directly to the proportionate amount of building area, land area and street frontage, except as noted herein, within one benefit zone.

The "Basic Benefit Units" will be expressed as a combined function of building square footage (Benefit Unit "A"), land square footage (Benefit Unit "B") and street frontage (Benefit Unit "C"). Based on the shape of the proposed ODMD, as well as the nature of the District program elements, it is determined that all identified properties will gain a direct and proportionate degree of special benefit based on the respective amount of building area, land area and street frontage, except as noted herein, within one benefit zone. Special benefit proportionality varies for different land uses/ownership types and assessable property characteristics (units), are adjusted via differing assessment methodologies and multiplier factors. See "Special Circumstances" beginning on page 20 of this Plan which delineates special assessment methodologies and factors and how and when they are applied.

For the array of land uses within the PBID, the interactive application of building and land areas and street frontage quantities are a common method of fairly and equitably spreading special benefit costs to these beneficiaries of PBID funded services, programs and improvements. Each of these factors directly relates to the degree of special benefit each assessed parcel will receive from PBID funded activities. There are no parcels zoned solely residential within ODMD.

Building area is a direct measure of the static utilization of each parcel and its corresponding impact or draw on PBID funded activities. In the opinion of the Assessment Engineer, the targeted weight of this factor,

building area, should generate approximately 30% of the total PBID revenue (28.1905% when adjusted for precise parcel measurements, land use factors and program costs).

Land area is a direct measure of the current and future development capacity of each parcel and its corresponding impact or draw on PBID funded activities. In the opinion of the Assessment Engineer, the targeted weight of this factor, land area, should generate approximately 40% of the total PBID revenue (43.4115% when adjusted for precise parcel measurements, land use factors and program costs).

Street Frontage is a direct measure of the current and future development capacity of each parcel and its corresponding impact or draw on PBID funded activities. Street frontage includes all public street frontages of a parcel. In the opinion of the Assessment Engineer, the targeted weight of this factor, street frontage, should generate approximately 30% of the total PBID revenue (28.3980% when adjusted for precise parcel measurements, land use factors and program costs).

Special Circumstances

1. Lower Tier Residential Uses (1-6 non-condominium residential units)
It is the opinion of the Assessment Engineer that these land uses do not specially benefit from marketing and promotion activities to the extent that commercial parcels and parcels with higher density residential rental units on them do. It is the opinion of the Assessment Engineer that the assessment for parcels with 1-6 residential units on them shall be based on only on exterior building area which is a common method of fairly and equitably spreading special benefit costs to these land uses. Further, a special benefit adjustment factor of 0.5 will be applied to the measured exterior building area which then produces the number of assessable building area units. This assessment methodology directly relates to the proportionate amount of special benefit each residential parcel with 1-6 units on them will receive from ODMD funded services, programs and improvements for these land uses.

2. Upper Tier Residential Uses (7+ non-condominiums residential units)
It is the opinion of the Assessment Engineer that these land uses do not specially benefit from marketing and promotion activities to the extent that commercial parcels do but more than parcels with 1-6 residential units on them do. It is the opinion of the Assessment Engineer that the assessment for parcels with 7+ residential units on them shall be based on exterior building area, parcel land area and parcel street frontage which is a common method of fairly and equitably spreading special benefit costs to these land uses. Further, a special benefit adjustment factor of 0.5 will be applied to the measured exterior building area, land area and street frontage which then produces the number of assessable building area units, land area units and street frontage units. This assessment methodology directly relates to the proportionate amount of special benefit each residential parcel with 7+ units on them will receive from ODMD funded services, programs and improvements for these land uses.

3. Mixed-Use (Non-Condominium Commercial and Residential)
It is the opinion of the Assessment Engineer that parcels with non-condominium mixed commercial and residential uses on them will specially benefit from PBID funded programs, services and improvements but different than those with only commercial uses on them. The residential portions of these land uses do not specially benefit from marketing and promotion activities to the extent that commercial uses do. As such,

the assessment rates and applicable assessment methodology will be applied based on each land use portion and the area of the parcel they cover. Mixed-use parcels will be assessed for the commercial use portions at commercial rates for the commercial building area, the parcel land area covered by commercial uses and the amount of direct commercial street frontage. The residential land use portions will be assessed based on the residential criteria and methodologies delineated in # 2 and 3 above.

4. Residential Condominiums

It is the opinion of the Assessment Engineer that these land uses do not specially benefit from marketing and promotion activities to the extent that commercial parcels and other parcels with residential units on them do. It is the opinion of the Assessment Engineer that the assessment for residential condominiums shall be based on only on interior building area which is a common method of fairly and equitably spreading special benefit costs to these unique property ownerships, subdivisions and land uses. Further, a special benefit adjustment factor of 0.5 will be applied to the measured interior building area which then produces the number of assessable building area units. This assessment methodology directly relates to the proportionate amount of special benefit each residential condominium parcel will receive from ODMD funded services, programs and improvements for these land uses.

5. Commercial Condominiums

It is the opinion of the Assessment Engineer that such units, when located solely on ground floors, shall be assessed based on actual land area covered, interior condo building area and direct street frontage or pro-rated street frontage for each unit. Multi-floor commercial condominiums shall be assessed on interior condo building area and pro-rated land area and street frontage as determined by the Assessment Engineer depending on the development configuration. If residential condominiums are part of the development, the residential portions will be assessed based on the residential criteria and methodology delineated in #1 above.

6. Publicly Owned/Occupied Parcels

Each assessable publicly (government) owned parcel and facility within ODMD will proportionately specially benefit as delineated herein from the ODMD funded supplemental services, programs and improvements, but differently than privately owned parcels. It is the opinion of the Assessment Engineer that publicly owned parcels and public facilities do not specially benefit to the same extent as privately owned parcels from PBID funded district identity/placemaking services, programs and improvements. To offset this special benefit differential, publicly owned parcels with public facilities on them will not be assessed for publicly used building areas located on these parcels. Publicly owned parcels with non-government uses on them will be assessed for building areas not occupied by government uses and facilities.

It is noted that the only publicly owned parcel not being assessed is the United States Post Office parcel on A Street. The US Attorney General has opined that Federally owned properties are exempt from local taxes and benefit assessments in accordance with the Supremacy Clause of the US Constitution. As such, no direct ODMD funded special benefit services, programs and improvements will be provided adjacent to or for the special benefit of this parcel.

7. Non-Profit Owned and Occupied Parcels

Each identified and assessable non-profit owned parcel and use within ODMD will proportionately

specially benefit as delineated herein from the ODMD funded supplemental services, programs and improvements, but differently than other privately owned parcels. It is the opinion of the Assessment Engineer that non-profit owned parcels and uses do not specially benefit to the same extent as other privately owned parcels from district identity/placemaking services, programs and improvements. To offset this special benefit differential, non-profit owned parcels with non-profit uses on them will not be assessed for non-profit used building areas located on these parcels. Non-profit owned parcels with "for-profit" uses on them will be assessed for building areas occupied by "for-profit" uses.

8. Changes to Building or Parcel Size

Any changes in building size, parcel size and street frontage(s) as a result of new construction or demolition or land adjustments including but not limited to lot splits, consolidations, subdivisions, street dedications, right of way setbacks shall have their assessment adjusted upon final City approval of such parcel adjustments.

9. Other Future Development

Other than future maximum rates and the assessment methodology delineated in this Plan and the Engineer's Report, per State Law (Government Code Section 53750), future assessments may increase for any given parcel if such an increase is attributable to events other than an increased rate or revised methodology, such as a change in the density, intensity, or nature of the use of land. Any change in assessment formula methodology or rates other than as stipulated in this Plan and the Engineer's Report would require a new Proposition 218 ballot procedure in order to approve any such changes.

Taking into account all identified specially benefiting parcels within the District and their respective assessable benefit units, the rates, cumulative quantities and assessment revenues by factor are shown in the following Tables:

Year 1 – 2024/2025 – Gross Quantities

GROSS BLDG AREA (SF)	# OF ASSESABLE PARCELS	GROSS LAND AREA (SF)	GROSS STREET FRONTAGE (LF)
1,277,861	432	3,262,505	30,708

Year 1 – 2024/2025 - Assessable Benefit Units

ASSESSABLE BLDG AREA UNITS	# OF ASSESSABLE PARCEL UNITS	ASSESSABLE LAND AREA UNITS	ASSESSABLE STREET FRONTAGE UNITS
1,171,556.50	383.50	3,133,029.41	35,405.37

Year 1 – 2024/25 Projected Assessment Revenue

BLDG ASSMT REVENUE	LAND 1 ASSMT REVENUE	LAND 2 ASSMT REVENUE	STREET FRONTAGE ASSMT REVENUE	TOTAL ASSMT REVENUE
$161,323.33	$152,556.30	$95,870.70	$162,510.65	$572,260.98
28.1905%	26.6585%	16.7530%	28.3980%	100.00%

The number of Benefit Units for each identified benefiting parcel within the proposed renewed ODMD was computed from data extracted from County Assessor records and maps. These data sources delineate current land uses, building and property areas and dimensions of record for each tax parcel. While it is understood that this data does not represent legal field survey measurements or detailed title search of recorded land subdivision maps or building records, it does provide an acceptable basis for the purpose of calculating property-based assessments. All respective property data being used for assessment computations will be provided to each property owner in the District for their review. If a property owner believes there is an error on a parcel's assessed quantities, the District may confirm the data with the Ventura County Assessor's office. If District data matches Assessor's data, the property owner may opt to work with the Assessor's office to correct the data so that the District assessment may be corrected.

Assessment Formula

Based on the nature of the programs to be funded as well as other rationale outlined in Step 1 above, it is the opinion of the Assessment Engineer that the ODMD assessments will be based on building area, land area, and street frontage except as otherwise noted herein.

The proposed assessment formula is as follows:

Assessment = Assessable Building Area (Unit A) x Unit A Rate, plus
Assessable Land Area (Unit B-1) x Unit B-1 Rate, plus
Assessable Land Area (Unit B-2) x Unit B-2 Rate, plus
Assessable Street Frontage (Unit C) x Unit C Rate

YEAR 1 –2024/25 Assessment Rates

BLDG ASSMT RATE ($/UNIT A)	LAND ASSMT RATE 1 ($/UNIT B-1)	LAND ASSMT RATE 2 ($/UNIT B-2)	FRONTAGE ASSMT RATE ($/UNIT C)
$0.1377	$397.80	$0.0306	$4.59

The complete Year 1 – 2024-25 assessment roll of all parcels to be assessed by this District is included in this Plan as Appendix I.

Assessment Formula Unit Rates

Using figures from the Assessable Benefit Units Table and the Projected Assessment Revenue Table on pages 18-19 of this Plan, the assessment rates and weighted multipliers for each factor are calculated as follows:

Building Area Rate (Unit A)

($572,260.98 x 28.1905%)/1,171,556.50 units = $0.1377/Building Unit A

Land Area Rate (Unit B-1)

($572,260.98 x 26.6585%)/383.50 units = $397.80/Land Unit B-1

Land Area Rate (Unit B-2)

($572,260.98 x 16.7530%)/3,133,029.41 units = $0.0306/Land Unit B-2

Street Frontage Rate (Unit C)

($572,260.98 x 28.3980%)/35,405.37 units = $4.59 Street Frontage Unit C

Since the ODMD is planned for a 5-year term, maximum assessment rates for future years (Years 2-5) must be set at the inception of the PBID. While future inflationary and other program cost increases are unknown at this point, a built in maximum increase of 5% per annum is incorporated into the projected program costs and, in turn, the resultant assessment rates for the 5-year term of the PBID. These figures are shown in the table below. Assessment rates may not exceed those indicated below.

In addition, any annual budget surplus or deficit will be incorporated into the subsequent year's PBID budget. Within the constraints of the annual adjustment, annual assessments will be set to account for surpluses or deficits carried forward.

ODMD – 5-Year Maximum Assessment Rates
(Includes a 5%/Yr. Max Increase)

YEAR	BLDG ASSMT RATE ($/UNIT)	LAND ASSMT RATE 1 ($/UNIT)	LAND ASSMT RATE 2 ($/UNIT)	FRONTAGE ASSMT RATE ($/UNIT)
1	$0.1377	$397.8000	$0.0306	$4.5900
2	$0.1446	$417.6900	$0.0321	$4.8195
3	$0.1518	$438.5745	$0.0337	$5.0605
4	$0.1594	$447.3460	$0.0344	$5.3135
5	$0.1674	$456.2929	$0.0351	$5.5792

SAMPLE ASSESSMENT CALCULATION:

A 7,000 square foot lot with 50 linear feet of street frontage and a 5,000 square foot building on it

Bldg Area	= 5,000 SF x $0.1377	= $ 688.50
Land Area	= 7,000 SF x $0.0306 SF + $397.80	= $ 612.00
Street Frontage	= 50 LF x $4.59/LF	= $ 229.50
TOTAL YEAR 1 ASSESSMENT		= **$1,530.00**
Per Month		= $ 128/Month
Per Day		= $4.25/Day

The complete Year 1 – 2024-25 assessment roll of all parcels to be assessed by this PBID is included in this Plan as Appendix I.

V. PUBLICLY OWNED PARCELS

The State Constitution - Article 13D (Proposition 218) states that "parcels within a District that are owned or used by any agency, the State of California or the United States shall not be exempt from assessment unless the agency can demonstrate by clear and convincing evidence that those publicly-owned parcels in fact receive no special benefit."

There are 154 publicly owned parcels within ODMD, all of which are identified and assessable for which District funded special benefit programs, services and improvements will be provided. All 154 of the

assessed publicly owned parcels are owned by the City of Oxnard, including the Oxnard Parking Authority and the Oxnard Housing Authority. It is noted that the only publicly owned parcel within ODMD not being assessed is the United States Post Office parcel on A Street. The US Attorney General has opined that Federally owned properties are exempt from local taxes and benefit assessments in accordance with the Supremacy Clause of the US Constitution. As such, no direct PBID funded special benefit services, programs and improvements will be provided adjacent to this parcel.

For all other publicly owned/occupied parcels and facilities within ODMD, each of these parcels specially benefit from District funded programs services and improvements. The special benefits include cleaner and safer facility entrances and perimeters for their employees, visitors, tenants, vendors and other users of these public locations and facilities. Publicly owned parcels and facilities will be included in all maps, directories and District advertisements and web displays and are active components of Downtown Oxnard's identity and fabric.

ODMD services are designed to improve the safety and cleanliness for visitors, employees, tenants and users of public facilities on publicly owned parcels within the District by deterring crime and reducing litter and debris, each considered detractions to employment, visitation and use of public facilities if not contained and properly managed. In turn, these services will serve to enhance the public service levels provided by public facilities and parcels within ODMD.

Each identified and assessable publicly owned parcel and facility within ODMD will proportionately specially benefit as delineated herein from the ODMD funded supplemental services, programs and improvements, but differently than privately owned parcels. It is the opinion of the Assessment Engineer that publicly owned parcels and public facilities do not specially benefit to the same extent as privately owned parcels from PBID funded services, programs and improvements. To offset this special benefit differential, publicly owned parcels with public facilities on them will not be assessed for public building areas located on these parcels. Publicly owned parcels with non-government uses on them will be assessed for building areas not occupied by government uses and facilities.

There is no compelling evidence that these identified assessable publicly owned parcels and facilities would not proportionately specially benefit from ODMD funded programs, services and improvements as delineated herein and, thus, will be assessed similar to privately owned parcels, except as noted herein.

VI. PBID DISTRICT GOVERNANCE

The governance or management of a PBID typically requires an "Owner's Association" to carry out the PBID services and activities. State PBID Law (36600 Streets & Highways Code) also requires that the Owner's Association carry out specific additional functions. This includes preparation of an Annual Report to the City Council on the PBID activities for the past fiscal year and those proposed for the next fiscal year. The Owner's Association may also recommend to the City Council from time to time, changes to the PBID boundaries, benefit zones, assessment formula or PBID programs and activities, all subject to public notification and, in some cases petition/balloting requirements.

Meetings of the Owner's Association and its standing Committees shall be subject to the State of California "Brown Act" open meeting law.

VII. PROPOSED RULES AND REGULATION APPLIED TO THE DISTRICT

There are no specific rules or regulations applied to this PBID

VIII. OTHER ITEMS

No bonds will be issued for any ODMD projects in conjunction with this renewal.

IX. PLAN AUTHOR

The author and preparer of this Plan is Ed Henning of Edward Henning & Associates

X. IMPLEMENTATION TIME TABLE

The renewed PBID is expected to begin operation by January 2025. In order to meet this goal, the following procedural timeline is proposed:

Date	Action/Task
Jan 2024	• Finalize PBID Management District Plan
Feb 2024	• Initiate petition drive
Feb-Mar 2024	• Collect petitions signed by property owners
April 2024	• Submit majority support petitions to City along with Management Plan
Spring 2024	• City Council adopts Resolution of Intention to renew the PBID
Spring 2024	• City sends notice of PBID public hearing and a ballot to all property owners within PBID
Mid-2024	• City Council conducts hearing (ballots due by this date)
Mid-2024	• Providing no majority ballot protest is filed at the hearing, Council approves Ordinance of Renewal for the PBID
August 2024	• Assessment roll submitted to County Assessor
Dec 10/Apr 10 (due)	• Assessments billed and collected by County with property taxes
1st Quarter '25	• Revenues remitted to Owner's Association per contract with City
(5 years)	• Owner's Association carries out renewed PBID programs and services

APPENDIX 1

OXNARD DOWNTOWN MANAGEMENT DISTRICT RENEWAL

ASSESSMENT ENGINEER'S REPORT

Being Renewed for a 5 Year Term Pursuant to
California Streets and Highways Code Section 36600 et seq.
Property & Business Improvement District Act of 1994, as amended

Prepared by
Edward V. Henning
California Registered Professional Engineer # 26549
Edward Henning & Associates

APRIL 10, 2024

V 3.0

ASSESSMENT ENGINEER'S REPORT

To Whom It May Concern:

I hereby certify to the best of my professional knowledge and experience that each of the identified benefiting properties located within the proposed Oxnard Downtown Management District ("ODMD") being renewed for a five (5) year term will receive a special benefit over and above the benefits conferred on the public at large and that the amount of the proposed assessment is proportional to, and no greater than the benefits conferred on each respective property.

Prepared by Edward V. Henning, California Registered Professional Engineer # 26549

RPE #26549 **April 10, 2024**

Edward V. Henning Date

(NOT VALID WITHOUT SIGNATURE AND CERTIFICATION SEAL HERE)

Introduction

This report serves as the "detailed engineer's report" required by Section 4(b) of Article XIIID of the California Constitution (Proposition 218) to support the benefit property assessments to be levied within the proposed ODMD in the City of Oxnard, California being renewed for a five (5) year term. The discussion and analysis contained within this Report constitutes the required "nexus" of rationale between assessment amounts levied and special benefits derived by real properties within the proposed renewed ODMD.

Background

The ODMD is a is a property-based benefit assessment type district being renewed for a five (5) year term pursuant to Section 36600 et seq. of the California Streets and Highways Code (as amended), also known as the Property and Business Improvement District Law of 1994 (the "Act"). Due to the benefit assessment nature of assessments levied within a property and business improvement district ("PBID"), district program costs are to be distributed amongst all identified benefiting properties based on the proportional amount of special program benefit each property is expected to derive from the assessments levied. Within the Act, frequent references are made to the concept of relative "benefit" received from PBID programs and activities versus amount of assessment paid. Only those properties expected to derive special benefits from PBID funded programs and activities may be assessed and only in an amount proportional to the relative special benefits expected to be conferred on each assessed property.

Supplemental Article XIIID Section 4(b) California Constitution
Proposition 218 Procedures and Requirements

Proposition 218, approved by the voters of California in November of 1996, adds a supplemental array of procedures and requirements to be carried out prior to levying a property-based assessment like the ODMD. These requirements are in addition to requirements imposed by State and local assessment enabling laws. These requirements were "chaptered" into law as Article XIIID Section 4(b) of the California Constitution.

Since Article XIIID provisions will affect all subsequent calculations to be made in the final assessment formula for the ODMD, these supplemental requirements will be taken into account. The key provisions of Article XIIID along with a description of how the ODMD complies with each of these provisions are delineated herein.

(Note: All section references below pertain to Article XIIID of the California Constitution):

Finding 1. From Section 4(a): "Identify all parcels which will have a special benefit conferred upon them and upon which an assessment will be imposed".

Setting:
The proposed renewed ODMD is centrally located in the center of Oxnard and centered along A Street from First Street to Eighth Street. ODMD is bounded roughly by First and Second Streets on the north, the Railroad tracks on the east, Eighth Street on the south and C and D Streets on the west. There is one benefit zone within ODMD (See attached map in Appendix 2).

General Boundary Description
ODMD includes 433 parcels of which 432 are identified assessed parcels in a 32 block area of Historic Downtown Oxnard. The property uses within the boundaries of the proposed renewed ODMD which will receive special benefits from PBID funded programs and services are currently a unique mix of retail, restaurant, service, office, government, residential and parking. ODMD boundaries were selected to incorporate the core Downtown parcels and businesses. There is one benefit zone within the proposed renewed District. It is noted that ODMD is being expanded to the north to First Street from the centerline of B Street to Oxnard Boulevard. This two block area includes a combination of commercial parcels associated with Downtown Oxnard along with mixed use parcels with residential rental units.

Detailed Boundary Description
More specifically, the ODMD is described as follows:

> Beginning at the intersection of the centerlines of Second Street and D Street; thence east along said centerline of Second Street to the centerline of B Street; thence north along said centerline of B Street to the centerline of First Street; thence east along said centerline of First Street to the east property line of Oxnard Boulevard; thence south along said east property line of Oxnard Boulevard to the tangent intersection point with the west properly line of the railroad right of way; thence southeast and south along said west property line of the railroad right of way to the centerline of Fifth Street; thence west along said centerline of Fifth Street to the prolongation of the east property line of the public alley lying east of and parallel to Meta Street; thence south along said east properly line of said public alley to the centerline of Seventh Street; thence west along said centerline of Seventh Street to the east property line of parcel APN 202-0-360-110; thence south along said east property line of said parcel APN 202-0-360-110 to the south property line of said parcel APN 202-0-360-110; thence west along said south property line of said parcel APN 202-0-360-110 to the west property line of said parcel APN 202-0-360-110; thence north along said west property line of said parcel APN 202-0-360-110 to the centerline of Seventh Street; thence west along said centerline of Seventh Street to the centerline of Oxnard Boulevard; thence south along said centerline of Oxnard Boulevard to the centerline of Eighth Street; thence west along said centerline of Eighth Street to the centerline of D Street; thence north along said centerline of D Street to the centerline of Seventh Street; thence east along said centerline of Seventh Street to the prolongation of the west property line of the public alley lying

east of and parallel to D Street; thence north along said west property line of said public alley to the centerline of Third Street; thence west along said centerline of Third Street to the centerline of D Street; thence north along said centerline of D Street to the point of beginning.

Benefit Zones
There is one benefit zone within the proposed renewed District.

District Boundary Rationale
The ODMD boundaries encompass the heart of Downtown Oxnard. These parcels showcase a unique array of pedestrian oriented uses - retail, restaurant, service, office, government, residential and parking that form what is considered the "cohesive urban fabric" of the evolving mixed-use Downtown center.

The District boundaries were chosen to generally include parcels that comprise the commercial core that attracts pedestrians and visitors to Downtown Oxnard. Also included are current as well as future in-town residential parcels. Parcels adjacent to the north, south and east of ODMD are not part of the District's commercial and in-town residential pedestrian core and have different marketing needs than those in the ODMD. These outside parcels and uses require different services than those in the ODMD and would not specially benefit from the increased pedestrian oriented programs, services and improvements offered by the ODMD. Therefore, they have not been included within the ODMD boundaries.

Surrounding parcels to the north, south and west that are zoned solely residential and/or with residential uses have not been included within the boundaries of the PBID. The Property and Business Improvement District Law of 1994, California Streets & Highway Code § 36632 states, "Properties zoned solely for residential use…… are conclusively presumed not to benefit from the improvements and service funded through these assessments and shall not be subject to any assessment …..". For these reasons, no residentially zoned parcels or residential uses north, south or west of the proposed renewed District are included in the ODMD boundaries.

A list of all parcels included in the proposed renewed ODMD is shown as Appendix 1, attached to this Report identified by their respective Ventura County assessor parcel number. The boundary of the proposed renewed ODMD is shown on the map of the proposed renewed ODMD attached as Appendix 2 to this Report.

All identified assessed parcels within the above-described boundaries shall be assessed to fund supplemental special benefit programs, services and improvements as outlined in this Report and in the Management District Plan. All ODMD funded services, programs and improvements provided within the above described boundaries shall confer special benefit to identified assessed parcels inside the District boundaries and none will be provided outside of the District. Each assessed parcel within ODMD will proportionately specially benefit from the District funded programs and services (i.e. civil sidewalks, district identity/placemaking and organization). These services, programs and improvements are intended to improve commerce, employment, livability, rents and occupancy rates and investment viability of individually assessed parcels and businesses/residential units on them within ODMD.

District services, activities and programs confer special benefits on each and every individually assessed parcel by deterring crime, improving aesthetics and marketing goods and services available from individually assessed parcels and the businesses/occupants on them within the District, all considered necessary in a competitive properly managed mixed-use business district. All District funded services programs and improvements are considered supplemental, above normal base level services provided by the City of Oxnard and are only provided for the special benefit of assessed parcels within the boundaries of the proposed renewed ODMD.

The District includes 433 parcels of which 432 are identified as assessable within one Benefit Zone and which are listed in the Assessment Roll included as Appendix 1. For further information, a District Boundary Map is included as Appendix 2.

Finding 2. From Section 4(a): "Separate general benefits (if any) from the special benefits conferred on parcel(s). Only special benefits are assessable. "

QUANTITATIVE BENEFIT ANALYSIS

As stipulated in Article XIIID Section 4(b) of the California Constitution, assessment district programs and activities confer a combination of general and special benefits to properties, but the only program benefits that can be assessed are those that provide special benefit to the assessed properties. For the purposes of this analysis, a "general benefit" is hereby defined as: "A benefit to properties in the area and in the surrounding community or benefit to the public in general resulting from the improvement, activity, or service to be provided by the assessment levied". "Special benefit" as defined by Article XIIID means a distinct benefit over and above general benefits conferred on real property located in the district or to the public at large.

The property uses within the boundaries of the District that will receive special benefits from District funded programs and services are currently an array of retail, restaurant, service, office, banking, residential and commercial parking. Services, programs and improvements provided and funded by the District (i.e. civil sidewalks, district identity/placemaking and organization) are designed to provide special benefits to identified assessed parcels and the array of land uses within the boundaries of the ODMD as described in the Work Plan Details starting on page 10 of this Report.

The proposed renewed District programs, improvements and services and Year 1 – 2025 budget allocations are shown in the Table below:

Year 1 – 2025 District Special Benefit Budget (Assessment Revenue Only)

CIVIL SIDEWALKS	DISTRICT IDENTITY & PLACEMAKING	ORGANIZATION	TOTAL
$335,000	$82,000	$155,261	$572,261
58.5397%	14.3291%	27.1312%	100%

The special benefits conferred on assessed parcels within the ODMD are particular and distinct to each

and every identified assessed parcel within the ODMD and are not provided to non-assessed parcels outside of the ODMD. These programs, services and improvements will only be provided to each individual assessed parcel within the District boundaries and, in turn, confer proportionate "special benefits" to each assessed parcel.

In the case of the ODMD, the very nature of the purpose of this ODMD is to fund supplemental programs, services and improvements to assessed parcels within the District boundaries above and beyond what is being currently funded either via normal tax supported methods or other funding sources. The City of Oxnard does not provide these programs and services. All benefits derived from the assessments to be levied on assessed parcels within the District are for services, programs and improvements directly benefiting each individual assessed parcel within the District. No District funded services, activities or programs will be provided outside of the District boundaries.

While every attempt is made to provide District services and programs to confer benefits only to those identified assessed parcels within the District, Article XIIID stipulates that general benefits exist either by design or unintentional in all assessment districts and that a portion of the program costs must be considered attributable to general benefits and assigned a value. General benefits cannot be funded by assessment revenues. General benefits might be conferred on parcels within the ODMD, or "spillover" onto parcels surrounding the ODMD, or to the public at large who might be passing through the ODMD with no intention of transacting business within the ODMD or interest in the ODMD itself.

Assessment engineering experience throughout California has found that general benefits within a PBID type assessment district tend to range from 2-6% of the total costs. Most PBIDs in California for which this Assessment Engineer has provided assessment engineering services in conformance with Article XIIID have used the composite district overlay determinant method of computing general benefits which will be used for ODMD. This method of computing the value of general benefit involves a composite of three distinct types of general benefit – general benefit to assessed parcels within ODMD, general benefit to the public at large within ODMD and general benefit to parcels immediately outside/adjacent to ODMD.

General Benefit – Assessed Parcels within District

ODMD funded programs are narrowly designed and carefully implemented to specially benefit the assessed District parcels and are only provided for the special benefit to each and every assessed parcel within the District. It is the opinion of this Engineer, based on over 30 years of professional assessment engineering experience, that nearly 100% of benefits conferred on the 432 assessed parcels within the District are distinct and special. In the case of ODMD, it is projected that there are 0.25% general benefits conferred on these 432 assessed parcels. While this factor can typically range from 0.10% to 1.0%, this high ratio of special benefits to general benefits (0.25%) is because ODMD funded programs and services are specially geared to the unique needs of each assessed parcel within ODMD and are directed specially only to these parcels within ODMD. This concept is further reinforced by the proportionality of special benefits conferred on each assessed parcel within ODMD as determined by the special benefit assessment formula as it is applied to the unique and varying property characteristics of each parcel.. The computed 0.25% general benefit value on the 432 assessed parcels within the ODMD equates to $1,431 or (.25% x $572,261).

General Benefit – Public At Large

While the ODMD funded programs are narrowly designed and carefully implemented to specially benefit the assessed District properties and are only provided for the special benefit to each and every assessed parcel within the District, these District funded programs may also provide an incidental general benefit to the public at large within the District. Assessment Engineering experience in California has found that generally well over 95% of people moving about within PBID boundaries are engaged in business related to assessed parcels and businesses contained on them within the PBID, while the public at large "just passing through" is typically much less than 5%.

Tangible services and improvements such as security, cleanliness, bench and shade tree maintenance would confer higher levels of general benefits on the public at large than say planters, decorative pavement/signage and other general district management and operation activities. Typically, a factor range from 0.5% to 2% (0.005 to 0.02) is assigned to tangible streetscape/sidewalk type services, programs and improvements,. Then a factor range from 0.25% to 1.5% (0.0025 to 0.015) is assigned to intangible services, programs and improvements.

Based on experience curves and the nature of the proposed ODMD funded services, programs and improvements and over 30 years of assessment engineering experience, it is the opinion of this Assessment Engineer that districtwide general benefit factors for each of the ODMD funded special benefit program element costs that provide a general benefit to the public at large would be 1.5% (0.015) assigned to Civil Sidewalks and 0.5% (0.005) assigned to both District Identity/Placemaking and Organization.

These factors are applied to each assessment funded program element cost in order to compute the dollar and percent value of districtwide general benefits to the public at large. The total dollar value of this general benefit type, public at large, equates to $6,211. Each of these factors and corresponding general benefit calculations/values for the public at large are shown in the Table below:

GENERAL BENEFITS TO "PUBLIC AT LARGE"

	A	B	C	E
Program Element	**Dollar Allocation**	**General Benefit Percent**	**General Benefit Factor**	**General Benefit Value (A x C)**
CIVIL SIDEWALKS	$335,000	1.50%	0.0150	$5,025
DISTRICT IDENTITY & PLACEMAKING	$82,000	0.50%	0.0050	$410
ORGANIZATION	$155,261	0.50%	0.0050	$776
Total	$572,261			$6,211

Spillover General Benefits to Parcels Outside of District

While District programs and services will not be provided directly to parcels outside the District boundaries, it is reasonable to conclude that District services may confer an indirect general benefit on parcels immediately adjacent to the District boundaries. An inventory of the District boundaries finds

that the District is surrounded by 69 parcels, of which 12 are commercial uses and 57 are residential, non-profit or public uses adjacent to or across a street or alley from the proposed renewed ODMD. There is 1 non-identified (i.e. not assessed) exempt parcel within the proposed renewed ODMD. Typically, a factor of 100% (1.0) is first assigned to assessed parcels within the district, then a factor range from 5% to 15% (0.05 to 0.15) is assigned to commercial zoned and used parcels directly outside the district, then a factor range from 0.5% to 1.5% (0.005 to 0.015) is assigned to residential zoned and used parcels directly outside the district, and finally, a factor range from 0.5% to 1.5% (0.005 to 0.015) is assigned to public and/or non-profit owned and fully occupied parcels directly outside the district.

The 69 parcels outside the District boundaries adjacent to or across streets or alleys from assessed parcels within the District as well as the 1 non-identified, non-assessed parcel within the District can reasonably be assumed to receive some indirect general benefit as a result of PBID funded programs, services and improvements. Based on over 30 years of assessment engineering experience, it is the opinion of this Assessment Engineer that a benefit factor of 1.0 be attributed to the 432 identified assessed parcels within the District; a benefit factor of 0.1 be attributed to general benefits conferred on the 13 commercial parcels adjacent to or across a street or alley from the proposed renewed ODMD as well as the 1 non-assessed parcel within the ODMD; and a benefit factor of 0.01 be attributed to general benefits conferred on the 57 residential, non-profit and public parcels adjacent to or across a street or alley from the proposed renewed ODMD. The cumulative dollar value of this general benefit type equates to $2,477 ($1,722+ $755) as delineated in the Table below.

"Spillover" General Benefits

Parcel Type	Quantity	Benefit Factor	Benefit Units	Benefit Percent	Benefit Value
Assessed Parcels In	432	1.00	432.00	99.5690%	$572,261
Commercial Perimeter Parcels Out; Non-Assessed In	13	0.10	1.30	0.2996%	$1,722
Other Perimeter Parcels Out	57	0.01	0.57	0.1314%	$755
TOTAL			433.87	100.00%	$574,738

Composite General Benefit

Based on the general benefit values delineated in the three sections above, the total value of general benefits conferred on assessed parcels within the District, the public at large and parcels outside the District equates to $10,119 ($1,431 + $6,211 + $2,477) or 1.74% of the total adjusted costs. This leaves a value of 98.26% assigned to special benefit related costs. For the purposes of this analysis, the general benefit value of 1.74% will be conservatively rounded up to 2.0% or $11,679. The general benefit value of $11,679 when added to the special benefit value of $572,261 (Year 1 –2025 assessments) equates to a total adjusted Year 1 – 2025 program cost of $583,940. Remaining costs that are attributed to general benefits will need to be derived from other sources. A comparison of special and general benefit funding sources is shown in the Table below.

Special and General Benefit Revenue Sources

Revenue Source	Revenue	% of Total
District Assessments	$572,261	98.0%
Grants, donations, sponsors, program income, etc.	$11,679	2.0%
TOTAL	**$583,940**	**100.0%**

A breakdown of projected special and general benefit costs for each year of the 5-year renewal term is shown in the following Table:

5 Year Special + General Benefit Costs

YR	PROGRAM CATEGORY	SPECIAL BENEFIT ASSESSMENT COSTS	GENERAL BENEFIT NON-ASSESSMENT COSTS	TOTAL ADJUSTED COSTS	% OF TOTAL
1	CIVIL SIDEWALKS	$335,000	$6,837	$341,837	58.5397%
	DISTRICT IDENTITY & PLACEMAKING	$82,000	$1,673	$83,673	14.3291%
	ORGANIZATION	$155,261	$3,169	$158,430	27.1312%
	Total	$572,261	$11,679	$583,940	100%
2	CIVIL SIDEWALKS	$351,750	$7,179	$358,929	58.5397%
	DISTRICT IDENTITY & PLACEMAKING	$86,100	$1,757	$87,857	14.3291%
	ORGANIZATION	$163,024	$3,327	$166,351	27.1312%
	Total	$600,874	$12,263	$613,137	100%
3	CIVIL SIDEWALKS	$369,338	$7,538	$376,876	58.5397%
	DISTRICT IDENTITY & PLACEMAKING	$90,405	$1,845	$92,250	14.3291%
	ORGANIZATION	$171,175	$3,493	$174,668	27.1312%
	Total	$630,918	$12,876	$643,794	100%
4	CIVIL SIDEWALKS	$387,805	$7,915	$395,720	58.5397%
	DISTRICT IDENTITY & PLACEMAKING	$94,925	$1,937	$96,862	14.3291%
	ORGANIZATION	$179,734	$3,668	$183,402	27.1312%
	Total	$662,464	$13,520	$675,984	100%
5	CIVIL SIDEWALKS	$407,195	$8,311	$415,506	58.5397%
	DISTRICT IDENTITY & PLACEMAKING	$99,671	$2,034	$101,705	14.3291%
	ORGANIZATION	$188,721	$3,851	$192,572	27.1312%
	Total	$695,587	$14,196	$709,783	100%

DISTRICT WORK PLAN

Overview

The Programs and activities to be funded by the ODMD include civil sidewalks, district identity/placemaking and organization. The property uses within the boundaries of the District that will receive special benefits from District funded programs, services and improvements are currently a unique mix of retail, restaurant, service, office, government, residential and parking. District funded activities are primarily designed to provide special benefits as described below to identified assessed parcels and array of land uses within the boundaries of the District.

These benefits are particular and distinct to each and every identified assessed parcel within the ODMD and are not provided to non-assessed parcels outside of the District. These programs, services and improvements will only be provided to each individual assessed parcel within the District boundaries and, in turn, confer proportionate "special benefits" to each assessed parcel.

In the case of the ODMD, the very nature of the purpose of this District is to fund supplemental programs, services and improvements to assessed parcels within the District boundaries above and beyond what is being currently funded either via normal tax supported methods or other funding sources. The City of Oxnard does not provide these supplemental programs and services. All benefits derived from the assessments to be levied on assessed parcels within the District are for services, programs and improvements directly benefiting each individual assessed parcel within the District. No District funded services, activities or programs will be provided outside of the District boundaries.

The projected program special benefit cost allocation of the District assessment revenues for the 5-year District term assuming a 5% maximum annual assessment rate increase is shown in the Table on page 15 of this Report.

WORK PLAN DETAILS

The programs, services and improvements to be provided by the ODMD include civil sidewalks, district identity/placemaking and organization. Each of these work plan elements are designed to add to the cohesive mixed-use urban fabric of Downtown Oxnard and assist in its economic success and vitality. The assessed parcels in the PBID will specially benefit from the District programs in the form of increased commerce and vitality through meeting the ODMD goals: to improve security, cleanliness, beautification, landscaping, livability and to attract and retain businesses and services, generate more pedestrian and visitor traffic and to increase commerce and improve the economic viability of each assessed parcel.

The following programs, services and improvements are proposed by the ODMD to specially benefit each and every individually assessed parcel within the District boundaries. ODMD services, programs and improvements will not be provided to parcels outside the District boundary.

Civil Sidewalks

Civil Sidewalks includes maintenance and safety ("clean and safe") services in public sidewalk areas

adjacent to assessed parcels in ODMD. The maintenance portion of the Civil Sidewalks category includes regular maintenance of public areas adjacent to each assessed parcel for the special benefit of each identified and assessed parcel and land use within ODMD. These services include:

- Clean Team 6-days per week
- litter and illegal dumping pickup
- graffiti and illegal sticker/poster removal
- check/empty 130+ sidewalk trash bins
- check, sweep, and secure trash enclosures
- removal of transient discards, including shopping carts, bio-waste
- sidewalk scrubbing/steam cleaning
- curb line block face sweeping
- tree pruning
- weed abatement
- visitor assistance

The maintenance portion of the Civil Sidewalks work plan component is designed to specially benefit and improve the aesthetic appeal of each identified and assessed parcel within the PBID and attract more customers, clients, employees, tenants and investors which potentially would increase business volumes, sales transactions, occupancies, rental income and attractiveness of investments. Maintenance services will only be provided for identified and assessed parcels located within the PBID boundaries.

The maintenance portion of the Civil Sidewalks work plan component will assist in creating a clean environment for each assessed parcel in the District. A dirty environment deters commerce and may fail to attract patrons, residents and visitors, and reduce rents and occupancies. For parcels with general commercial, retail, restaurant, office and commercial parking uses, this activity is designed to increase vehicular and pedestrian traffic, increase commerce and customer activity, attract and retain new business and patrons, and may increase commercial rents and commercial occupancies for the assessed parcels within the BID boundaries. In the case of assessed publicly/non-profit owned/occupied parcels, District funded clean programs and services provide these parcels with enhanced facility entrances and perimeters and better public/non-profit facilities in turn for their employees, visitors, vendors and users of these public/non-profit facilities. Further, in the case of assessed residential use parcels, District funded clean programs and services are designed to improve the appearance of entrances and perimeters for the special benefit of each assessed residential parcel and in turn their tenants, visitors and owners, which, in turn, may increase occupancies and rental income. Each assessed parcel will specially benefit from the clean programs and services which will only be provided to, and for the direct special benefit of, each identified assessed parcel within the proposed renewed District boundaries.

Safety

The safety portion of the Civil Sidewalks work plan category includes regular security of areas adjacent to each assessed parcel for the special benefit of each identified and assessed parcel and land use within ODMD. The safety portion of the Civil Sidewalks work plan component includes:

- daily bike & truck Safety Patrol
- loitering & trespassing subject removal
- Crime prevention awareness campaigns
- street light outage reporting and repair orders

The safety portion of the Civil Sidewalks work plan component is designed to specially benefit and improve the security of each identified and assessed parcel within the PBID and attract more customers, clients, employees, tenants and investors which potentially would increase business volumes, sales transactions, occupancies, rental income and attractiveness of investments. Safety services will only be provided for identified and assessed parcels located within the proposed renewed PBID boundaries.

The safety portion of the Civil Sidewalks work plan component will assist in creating a safe and secure environment for each assessed parcel in the District. An unsafe environment deters commerce and may fail to attract patrons, residents and visitors, and reduce rents and occupancies. For parcels with general commercial, retail, restaurant, office and commercial parking uses, this activity is designed to increase vehicular and pedestrian traffic, increase commerce and customer activity, attract and retain new business and patrons, and may increase commercial rents and commercial occupancies for the assessed parcels within the BID boundaries. In the case of assessed publicly/non-profit owned/occupied parcels, District funded safe programs and services provide these parcels with safer and enhanced facility entrances and perimeters and better public/non-profit facilities in turn for their employees, visitors, vendors and users of these public/non-profit facilities. Further, in the case of assessed residential use parcels, District funded safe programs and services are designed to improve the security of entrances and perimeters for the special benefit of each assessed residential parcel and in turn their tenants, visitors and owners, which, in turn, may increase occupancies and rental income. Each assessed parcel will specially benefit from the safe programs and services which will only be provided to, and for the direct benefit of, each identified assessed parcel within the District boundaries

District Identity/Placemaking

This work plan category includes regular marketing and image enhancement programs and services for the special benefit of each assessed parcel and land use within ODMD by creating a unique, marketable District identity. This work plan category also includes placement of, and care for, a variety of physical improvements and amenities within the public streetscape areas within ODMD for the special benefit of each identified and assessed parcel and land use within ODMD by creating a unique and marketable "sense of place". The District Identity/Placemaking work plan component includes:

- daily updated responsive website DowntownOxnard.org
- integrated social media promotion – Facebook, Instagram, Twitter, YouTube
- produced and sponsored live events (e.g. First Thursdays, Cruise Night, Halloween, etc.)
- district advertising, newsletters, press releases, media relations, original photo library
- Marketing Committee support for merchant coordinated promotions
- assist prospective businesses with referrals to leasable properties
- permit processing assistance

Also included are:
• district-wide holiday streetlamp décor
• 162 sidewalk flower planters
• Historic Plaza Park hanging flower baskets
• public art – utility box painting and temporary murals
• street banner program (88 street poles)

The District Identity/Placemaking work plan component is designed to specially benefit and improve the image of each assessed parcel within the PBID and attract more customers, clients, employees, tenants, residents and investors which potentially would increase business volumes, sales transactions, occupancies, rental income and attractiveness of investments. District Identity/Placemaking programs and services will only be provided for identified and assessed parcels located within the PBID boundaries.

For parcels with general commercial, retail, restaurant, office and commercial parking uses, District Identity/Placemaking services and programs are specifically designed to attract more customers, employees, tenants and investors for the special benefit of assessed parcels as a result of marketing assessed parcels and the goods and services and spaces available on these assessed parcels. This in turn, is intended to increase business volumes, sales transactions, commercial occupancies, commercial rental income and investment return. In the case of publicly/non-profit owned/occupied parcels that are assessed for these programs, District Identity/Placemaking creates better public/non-profit facilities and services on these assessed parcels by fostering better informed public/non-profit employees, visitors, vendors and users of these public/non-profit facilities. Further, in the case of residential use parcels, District Identity/Placemaking specially benefits each assessed residential parcel and creates better informed tenants, visitors and owners, which, in turn, enhance livability and may increase residential occupancies and rental income. District Identity/Placemaking services and programs will only be provided to, and for the direct and special benefit of, each identified assessed parcel within the District.

Organization

This work plan category includes professional management and related corporate operation costs of providing PBID funded services, programs and improvements for the special benefit of each identified and assessed parcel and land use within ODMD. The Organization work plan component includes:

• staff and full service office to manage PBID programs, projects, compliance reporting.
• full service office to assist property and business owners with District-related needs
• advocacy and representation of member interests on District issues and needs
• Organize "town hall" forums and advocacy on topics such as homeless solutions, Vision Plan

Organization also includes legal, accounting, insurance, production of the Annual Planning Report and Budget and quarterly reports, facilitation of meetings of the Owners' Association, Brown Act compliance, outreach to District property and business owners, and participation in professional peer/best practice forums such as the California Downtown Association or the International Downtown Association. It also covers the costs associated with District renewal. A portion of the Organization budget is held in reserve to offset delinquent and/or slow assessment payments.

The Organization component is key to the proper expenditure of District assessment funds and the administration of District programs and activities for the special benefit of all parcels and land uses within the ODMD. The Organization work plan component exists only for the purposes of the District and directly relates to the implementation of Civil Sidewalks and District Identity/Placemaking services, programs and improvements which specially benefit each identified assessed parcel within the District boundaries.

In summary, all District funded services, programs and improvements described above confer proportionate special benefits to identified assessed parcels inside the District boundaries and none will be provided outside of the District. Each assessed parcel within the ODMD will proportionately specially benefit from Civil Sidewalks, District Identity/Placemaking and Organization. These services, programs and improvements are intended to improve commerce, employment, livability, rents, occupancy rates and investment viability of assessed parcels, businesses and residents within the ODMD by deterring crime, reducing litter and debris, making capital improvements and professionally marketing goods, services and spaces available within the District, all considered necessary in a competitive properly managed contemporary mixed-use business district. All District funded services programs and improvements are considered supplemental, above normal base level services provided by the City of Oxnard and are only provided for the special benefit of each and every assessed parcel within the boundaries of the ODMD.

WORK PLAN BUDGET

Each identified assessed parcel within the ODMD will be assessed the full amount of the proportionate special benefit conferred upon it based on the level of District funded services provided. The projected District program special benefit (assessment) cost allocation budget for Year 1 (2025), is shown in the following Table:

ODMD Year 1 (2025) Special Benefit Assessment Budget

CIVIL SIDEWALKS	DISTRICT IDENTITY & PLACEMAKING	ORGANIZATION	TOTAL
$335,000	$82,000	$155,261	$572,261
58.5397%	14.3291%	27.1312%	100.00%

In order to carry out the District programs outlined in the previous section, a Year 1 assessment budget of $572,261 is projected. Since the District is planned for a 5-year term, projected program costs for future years (Years 2-5) are set at the inception of the District. While future inflationary and other program cost increases are unknown at this point, a built in maximum increase of 5% per annum, commensurate to special benefits received by each assessed parcel, is incorporated into the projected program costs and assessment rates for the 5-year District term. It is noted that the 5% maximum annual rate increase is deemed necessary in order to offset substantial service and improvement cost increases projected over the next several years and to provide levels of service and types of improvements expected and requested by District stakeholders. Carryovers, if any, may be reapportioned the following

year for related programs, services and improvements. Detailed annual budgets will be prepared by the Owner's Association Board and included in an Annual Plan for the City Council's review and approval.

It is recognized that market conditions may cause the cost of providing goods and services to fluctuate from year to year during the 5-year term of the proposed renewed District. Accordingly, the Owners' Association shall have the ability to reallocate budget line items within the budget categories based on such cost fluctuations subject to the review and approval by the Owners' Association Board and included in the Annual Planning Report that will be approved by the Oxnard City Council pursuant to Streets and Highways Code Section 36650. Any accrued interest or delinquent payments may be expended in any budget category. A 5-year projected ODMD budget is shown in the following Table:

YEAR 1-5 PROJECED DISTRICT ASSESSMENT BUDGET SUMMARY (Special Benefit Costs)

(Assumes 5% max rate increase per year)

YR	CIVIL SIDEWALKS	DISTRICT IDENTITY & PLACEMAKING	ORGANIZATION	TOTAL
	58.5397%	14.3291%	27.1312%	100.00%
1	$335,000	$82,000	$155,261	$572,261
2	$351,750	$86,100	$163,024	$600,874
3	$369,338	$90,405	$171,175	$630,918
4	$387,805	$94,925	$179,734	$662,464
5	$407,195	$99,671	$188,721	$695,587

The ODMD assessments may increase for each individual parcel each year during the 5-year effective operating period, but not to exceed 5% per year, commensurate to special benefits received by each assessed parcel, and must be approved by the Owners' Association Board of Directors, included in the Annual Planning Report and adopted by the City of Oxnard City Council. The Owners' Association Board of the Directors ("Property Owner's Association of the ODMD) shall determine the percentage increase to the annual assessment. The Owners' Association Executive Director shall communicate the annual increase to the City each year in which the District operates at a time determined in the Administration Contract held between the Owners' Association and the City of Oxnard.

No bonds are to be issued in conjunction with the proposed renewed District.

Pursuant to Section 36671 of the Streets and Highways Code, any funds remaining after the 5th year of operation will be rolled over into the renewal budget or returned to stakeholders. District assessment funds may be used to pay for costs related to the following District renewal term. If the District is not renewed or terminated for any reason, unexpended funds will be returned to the property owners.

Finding 3. From Section 4(a): "(Determine) the proportionate special benefit derived by each parcel in relationship to the entirety of the.....cost of public improvement(s) or the maintenance and operation expenses.....or the cost of the property related service being provided.

Each identified assessed parcel within the district will be assessed based on property characteristics unique only to that parcel. Based on the specific needs and corresponding nature of the program activities to be funded by the proposed renewed ODMD (i.e., civil sidewalks, district identity/placemaking and organization). It is the opinion of this Assessment Engineer that the assessment factors on which to base assessment rates relate directly to the proportionate amount of building area, land area and street frontage, except as noted otherwise herein, within one benefit zone.

The calculated assessment rates are applied to the actual measured parameters of each parcel and thereby are proportional to each and every other identified assessed parcel within the district. Larger buildings and parcels and/or ones with larger frontages are expected to impact the demand for services and programs to a greater extent than smaller building, land and/or street frontages and thus, are assigned a greater proportionate degree of assessment program and service costs. The proportionality is further achieved by setting targeted formula component weights for the respective parcel by parcel identified property attributes.

The proportionate special benefit cost for each parcel has been calculated based on proportionate formula components and is listed as an attachment to the Management District Plan and this Report. The individual percentages (i.e. proportionate relationship to the total special benefit related program and activity costs) is computed by dividing the individual parcel assessment by the total special benefit program costs.

Finding 4. From Section 4(a): "No assessment shall be imposed on any parcel which exceeds the reasonable cost of the proportional special benefit conferred on that parcel."

Not only are the proposed program costs reasonable due to the benefit of group purchasing and contracting which would be possible through the proposed renewed ODMD, they are also considerably less than other options considered by the ODMD Renewal Committee. The actual assessment rates for each parcel within the District directly relate to the level of service and, in turn, special benefit to be conferred on each parcel based on the respective building area, land area and street frontage of each parcel within one benefit zone, except as noted otherwise herein.

Finding 5. From Section 4(a): "Parcels.....that are owned or used by any (public) agency shall not be exempt from assessment....."

The State Constitution - Article 13D (Proposition 218) states that "parcels within a District that are owned or used by any agency, the State of California or the United States shall not be exempt from assessment unless the agency can demonstrate by clear and convincing evidence that those publicly-owned parcels in fact receive no special benefit."

There are 154 publicly owned parcels within ODMD, all of which are identified and assessable for which District funded special benefit programs, services and improvements will be provided. All 154 of the assessed publicly owned parcels are owned by the City of Oxnard, including the Oxnard Parking Authority and the Oxnard Housing Authority. It is noted that the only publicly owned parcel within ODMD not being assessed is the United States Post Office parcel on A Street. The US Attorney General has opined that Federally owned properties are exempt from local taxes and benefit assessments in accordance with the Supremacy Clause of the US Constitution. As such, no direct PBID funded special benefit services, programs and improvements will be provided adjacent to this parcel.

For all other publicly owned/occupied parcels and facilities within ODMD, each of these parcels specially benefit from District funded programs services and improvements. The special benefits include cleaner and safer facility entrances and perimeters for their employees, visitors, tenants, vendors and other users of these public locations and facilities. Publicly owned parcels and facilities will be included in all maps, directories and District advertisements and web displays and are active components of Downtown Oxnard's identity and fabric.

ODMD services are designed to improve the safety and cleanliness for visitors, employees, tenants and users of public facilities on publicly owned parcels within the District by deterring crime and reducing litter and debris, each considered detractions to employment, visitation and use of public facilities if not contained and properly managed. In turn, these services will serve to enhance the public service levels provided by public facilities and parcels within ODMD.

Each identified and assessable publicly owned parcel and facility within ODMD will proportionately specially benefit as delineated herein from the ODMD funded supplemental services, programs and improvements, but differently than privately owned parcels. It is the opinion of this Assessment Engineer that publicly owned parcels and public facilities do not specially benefit to the same extent as privately owned parcels from PBID funded services, programs and improvements. To offset this special benefit differential, publicly owned parcels with public facilities on them will not be assessed for public building areas located on these parcels. Publicly owned parcels with non-government uses on them will be assessed for building areas not occupied by government uses and facilities.

There is no compelling evidence that these identified assessable publicly owned parcels and facilities would not proportionately specially benefit from ODMD funded programs, services and improvements as delineated herein and, thus, will be assessed similar to privately owned parcels, except as noted herein.

<u>Finding 6.</u> From Section 4(b): "All assessments must be supported by a detailed engineer's report prepared by a registered professional engineer certified by the State of California".

This report serves as the "detailed engineer's report" to support the benefit property assessments proposed to be levied within the proposed renewed ODMD.

Finding 7. **From Section 4(c): "The amount of the proposed assessment for each parcel shall be calculated (along with) the total amount thereof chargeable to the entire district, the duration of such payments, the reason for such assessment and the basis upon which the amount of the proposed assessment was calculated."**

The individual and total parcel assessments attributable to special property benefits are shown in Appendix 1 to the Management District Plan and this Report. The proposed renewed District and resultant assessment levies will continue for 5-years and may be renewed again at that time. The reasons (purposes) for the proposed assessments are outlined in Finding 2 above as well as in the Management District Plan. The calculation basis of the proposed assessment is attributed to building area, land area and street frontage, except as noted herein, within one benefit zone.

Assessment Formula Methodology

Step 1. **Select "Basic Benefit Unit(s)"**

Background – Generic Assessment Formula Development

The method used to determine special benefits derived by each identified assessed property within a PBID begins with the selection of a suitable and tangible basic benefit unit. For property related services, such as those proposed in the ODMD, the benefit unit may be measured in linear feet of street frontage or parcel size in square feet or building size in square feet or any combination of these factors. Factor quantities for each parcel are then measured or otherwise determined. From these figures, the amount of benefit units to be assigned to each property can be calculated. Special circumstances such as unique geography, land uses, development constraints etc. are carefully reviewed relative to specific programs and improvements to be funded by the PBID in order to determine any levels of different benefit that may apply on a parcel-by-parcel or categorical basis.

Based on the factors described above such as geography and nature of programs and activities proposed, an assessment formula is developed which is derived from a singular or composite basic benefit unit factor or factors. Within the assessment formula, different factors may be assigned different "weights" or percentage of values based on their relationship to programs/services to be funded.

Next, all program and activity costs, including incidental costs, District administration and ancillary program costs, are estimated. It is noted, as stipulated in Article XIIID Section 4(b) of the California Constitution, and now required of all property-based assessment Districts, indirect or general benefits costs may not be incorporated into the assessment formula and levied on the District properties; only direct or "special" benefits and costs may be considered. Indirect or general benefit costs, if any, must be identified and, if quantifiable, calculated and factored out of the assessment cost basis to produce a "net" cost figure. In addition, Article XIIID Section 4(b) of the California Constitution also no longer automatically exempts publicly owned property from being assessed unless the respective public agency can provide clear and convincing evidence that their property does not specially benefit from the programs and services to be funded by the proposed special assessments. If special benefit is determined to be conferred upon such properties, they must be assessed in proportion to special benefits conferred in a manner similar to privately owned property assessments. (See pages 16- 17 of this Report for discussion regarding assessment of publicly owned parcels within the ODMD).

From the estimated net program costs, the value of a basic benefit unit or "basic net unit cost" can be computed by dividing the total amount of estimated net program costs by the total number of benefit units. The amount of assessment for each parcel can be computed at this time by multiplying the Net Unit Cost times the number of Basic Benefit Units per parcel. This is known as "spreading the assessment" or the "assessment spread" in that all costs are allocated proportionally or "spread" amongst all benefitting properties within the PBID.

The method and basis of spreading program costs varies from one PBID to another based on local geographic conditions, types of programs and activities proposed, and size and development complexity of the district.

Proposed ODMD Assessment Formula

Based on the specific needs and corresponding nature of the program activities to be funded by the proposed renewed ODMD (i.e. civil sidewalks, district identity/placemaking and organization) it is the opinion of this Assessment Engineer that the assessment factors on which to base assessment rates relate directly to the proportionate amount of building area, land area and street frontage, except as noted herein, within one benefit zone.

The "Basic Benefit Units" will be expressed as a combined function of building square footage (Benefit Unit "A"), land square footage (Benefit Unit "B") and street frontage (Benefit Unit "C"). Based on the shape of the proposed ODMD, as well as the nature of the District program elements, it is determined that all identified properties will gain a direct and proportionate degree of special benefit based on the respective amount of building area, land area and street frontage, except as noted herein, within one benefit zone. Special benefit proportionality varies for different land uses/ownership types and assessable property characteristics (units), are adjusted via differing assessment methodologies and multiplier factors. See "Special Circumstances" beginning on page 20 of this Report which delineates special assessment methodologies and factors and how and when they are applied.

For the array of land uses within the PBID, the interactive application of building and land areas and street frontage quantities are a common method of fairly and equitably spreading special benefit costs to these beneficiaries of PBID funded services, programs and improvements. Each of these factors directly relates to the degree of special benefit each assessed parcel will receive from PBID funded activities. There are no parcels zoned solely residential within ODMD.

Building area is a direct measure of the static utilization of each parcel and its corresponding impact or draw on PBID funded activities. In the opinion of this Assessment Engineer, the targeted weight of this factor, building area, should generate approximately 30% of the total PBID revenue (28.1905% when adjusted for precise parcel measurements, land use factors and program costs).

Land area is a direct measure of the current and future development capacity of each parcel and its corresponding impact or draw on PBID funded activities. In the opinion of this Assessment Engineer, the targeted weight of this factor, land area, should generate approximately 40% of the total PBID revenue (43.4115% when adjusted for precise parcel measurements, land use factors and program costs).

Street Frontage is a direct measure of the current and future development capacity of each parcel and its corresponding impact or draw on PBID funded activities. Street frontage includes all public street frontages of a parcel. In the opinion of this Assessment Engineer, the targeted weight of this factor, street frontage, should generate approximately 30% of the total PBID revenue (28.3980% when adjusted for precise parcel measurements, land use factors and program costs).

Special Circumstances

1. Lower Tier Residential Uses (1-6 non-condominium residential units)
It is the opinion of this Assessment Engineer that these land uses do not specially benefit from marketing and promotion activities to the extent that commercial parcels and parcels with higher density residential rental units on them do. It is the opinion of this Assessment Engineer that the assessment for parcels with 1-6 residential units on them shall be based on only on exterior building area which is a common method of fairly and equitably spreading special benefit costs to these land uses. Further, a special benefit adjustment factor of 0.5 will be applied to the measured exterior building area which then produces the number of assessable building area units. This assessment methodology directly relates to the proportionate amount of special benefit each residential parcel with 1-6 units on them will receive from ODMD funded services, programs and improvements for these land uses.

2. Upper Tier Residential Uses (7+ non-condominiums residential units)
It is the opinion of this Assessment Engineer that these land uses do not specially benefit from marketing and promotion activities to the extent that commercial parcels do but more than parcels with 1-6 residential units on them do. It is the opinion of this Assessment Engineer that the assessment for parcels with 7+ residential units on them shall be based on exterior building area, parcel land area and parcel street frontage which is a common method of fairly and equitably spreading special benefit costs to these land uses. Further, a special benefit adjustment factor of 0.5 will be applied to the measured exterior building area, land area and street frontage which then produces the number of assessable building area units, land area units and street frontage units. This assessment methodology directly relates to the proportionate amount of special benefit each residential parcel with 7+ units on them will receive from ODMD funded services, programs and improvements for these land uses.

3. Mixed-Use (Non-Condominium Commercial and Residential)
It is the opinion of this Assessment Engineer that parcels with non-condominium mixed commercial and residential uses on them will specially benefit from PBID funded programs, services and improvements but different than those with only commercial uses on them. The residential portions of these land uses do not specially benefit from marketing and promotion activities to the extent that commercial uses do. As such, the assessment rates and applicable assessment methodology will be applied based on each land use portion and the area of the parcel they cover. Mixed-use parcels will be assessed for the commercial use portions at commercial rates for the commercial building area, the parcel land area covered by commercial uses and the amount of direct commercial street frontage. The residential land use portions will be assessed based on the residential criteria and methodologies delineated in # 2 and 3 above.

4. Residential Condominiums
It is the opinion of this Assessment Engineer that these land uses do not specially benefit from

marketing and promotion activities to the extent that commercial parcels and other parcels with residential units on them do. It is the opinion of this Assessment Engineer that the assessment for residential condominiums shall be based on only on interior building area which is a common method of fairly and equitably spreading special benefit costs to these unique property ownerships, subdivisions and land uses. Further, a special benefit adjustment factor of 0.5 will be applied to the measured interior building area which then produces the number of assessable building area units. This assessment methodology directly relates to the proportionate amount of special benefit each residential condominium parcel will receive from ODMD funded services, programs and improvements for these land uses.

5. Commercial Condominiums

It is the opinion of this Assessment Engineer that such units, when located solely on ground floors, shall be assessed based on actual land area covered, interior condo building area and direct street frontage or pro-rated street frontage for each unit. Multi-floor commercial condominiums shall be assessed on interior condo building area and pro-rated land area and street frontage as determined by the Assessment Engineer depending on the development configuration. If residential condominiums are part of the development, the residential portions will be assessed based on the residential criteria and methodology delineated in #1 above.

6. Publicly Owned/Occupied Parcels

Each assessable publicly (government) owned parcel and facility within ODMD will proportionately specially benefit as delineated herein from the ODMD funded supplemental services, programs and improvements, but differently than privately owned parcels. It is the opinion of this Assessment Engineer that publicly owned parcels and public facilities do not specially benefit to the same extent as privately owned parcels from PBID funded district identity/placemaking services, programs and improvements. To offset this special benefit differential, publicly owned parcels with public facilities on them will not be assessed for publicly used building areas located on these parcels. Publicly owned parcels with non-government uses on them will be assessed for building areas not occupied by government uses and facilities.

It is noted that the only publicly owned parcel not being assessed is the United States Post Office parcel on A Street. The US Attorney General has opined that Federally owned properties are exempt from local taxes and benefit assessments in accordance with the Supremacy Clause of the US Constitution. As such, no direct ODMD funded special benefit services, programs and improvements will be provided adjacent to or for the special benefit of this parcel.

7. Non-Profit Owned and Occupied Parcels

Each identified and assessable non-profit owned parcel and use within ODMD will proportionately specially benefit as delineated herein from the ODMD funded supplemental services, programs and improvements, but differently than other privately owned parcels. It is the opinion of this Assessment Engineer that non-profit owned parcels and uses do not specially benefit to the same extent as other privately owned parcels from district identity/placemaking services, programs and improvements. To offset this special benefit differential, non-profit owned parcels with non-profit uses on them will not be assessed for non-profit used building areas located on these parcels. Non-profit owned parcels with "for-profit" uses on them will be assessed for building areas occupied by "for-profit" uses.

8. Changes to Building or Parcel Size

Any changes in building size, parcel size and street frontage(s) as a result of new construction or demolition or land adjustments including but not limited to lot splits, consolidations, subdivisions, street dedications, right of way setbacks shall have their assessment adjusted upon final City approval of such parcel adjustments.

9. Other Future Development

Other than future maximum rates and the assessment methodology delineated in this Report, per State Law (Government Code Section 53750), future assessments may increase for any given parcel if such an increase is attributable to events other than an increased rate or revised methodology, such as a change in the density, intensity, or nature of the use of land. Any change in assessment formula methodology or rates other than as stipulated in this Report would require a new Proposition 218 ballot procedure in order to approve any such changes.

Step 2. Quantify Total Basic Benefit Units

Taking into account all identified specially benefiting parcels within the District and their respective assessable benefit units and land use factors, the assessable quantities and assessment revenues by factor are shown in the following Tables:

Year 1 – 2024/2025 – Gross Quantities

GROSS BLDG AREA (SF)	# OF ASSESSABLE PARCELS	GROSS LAND AREA (SF)	GROSS STREET FRONTAGE (LF)
1,277,861	432	3,262,505	30,708

Year 1 – 2024/2025 - Assessable Benefit Units

ASSESSABLE BLDG AREA UNITS	# OF ASSESSABLE PARCEL UNITS	ASSESSABLE LAND AREA UNITS	ASSESSABLE STREET FRONTAGE UNITS
1,171,556.50	383.50	3,133,029.41	35,405.37

Year 1 – 2024/25 Projected Assessment Revenue

BLDG ASSMT REVENUE	LAND 1 ASSMT REVENUE	LAND 2 ASSMT REVENUE	STREET FRONTAGE ASSMT REVENUE	TOTAL ASSMT REVENUE
$161,323.33	$152,556.30	$95,870.70	$162,510.65	$572,260.98
28.1905%	26.6585%	16.7530%	28.3980%	100.00%

Step 3. Calculate Benefit Units for Each Property.

The number of Benefit Units for each identified benefiting parcel within the proposed renewed ODMD was computed from data extracted from County Assessor records and maps. These data sources delineate current land uses, building areas, property areas and dimensions of record for each tax parcel. While it is understood that this data does not represent legal field survey measurements or detailed title search of recorded land subdivision maps or building records, it does provide an acceptable basis for the purpose of calculating property-based assessments. All respective property data being used for assessment computations will be provided to each property owner in the District for their review. If a property owner believes there is an error on a parcel's assessed quantities, the District may confirm the data with the County Assessor's office. If District data matches Assessor's data, the property owner may opt to work with the Assessor's office to correct the data so that the District assessment may be corrected.

Step 4. Determine Assessment Formula

Based on the nature of the programs to be funded as well as other rationale outlined in Step 1 above, it is the opinion of this Engineer that the ODMD assessments will be based on building area, land area, and street frontage except as otherwise noted herein.

The proposed assessment formula is as follows:

Assessment = Assessable Building Area (Unit A) x Unit A Rate, plus
Assessable Land Area (Unit B-1) x Unit B-1 Rate, plus
Assessable Land Area (Unit B-2) x Unit B-2 Rate, plus
Assessable Street Frontage (Unit C) x Unit C Rate

YEAR 1 –2024/25 Assessment Rates

BLDG ASSMT RATE ($/UNIT A)	LAND ASSMT RATE 1 ($/UNIT B-1)	LAND ASSMT RATE 2 ($/UNIT B-2)	FRONTAGE ASSMT RATE ($/UNIT C)
$0.1377	$397.80	$0.0306	$4.59

The complete Year 1 – 2024-25 assessment roll of all parcels to be assessed by this District is included in this Report as Appendix I.

Assessment Formula Unit Rates

Using figures from the Assessable Benefit Units Table and the Projected Assessment Revenue Table on page 22 of this Report, the assessment rates and weighted multipliers for each factor are calculated as follows:

Building Area Rate (Unit A)

($572,260.98 x 28.1905%)/1,171,556.50 units = $0.1377/Building Unit A

Land Area Rate (Unit B-1)

($572,260.98 x 26.6585%)/383.50 units = $397.80/Land Unit B-1

Land Area Rate (Unit B-2)

($572,260.98 x 16.7530%)/3,133,029.41 units = $0.0306/Land Unit B-2

Street Frontage Rate (Unit C)

($572,260.98 x 28.3980%)/35,405.37 units = $4.59 Street Frontage Unit C

Step 5. Estimate Total District Costs

The total projected 5-year special benefit costs for 2025 – 2029 of the District are shown in the Table on page 15 of this Report assuming a maximum increase of 5% per year, commensurate to special benefits received by each assessed parcel.

Step 6. Separate General Benefits from Special Benefits and Related Costs (Article XIIID Section 4(b) of the California Constitution – Proposition 218)

Total Year 1 adjusted costs are estimated at $583,940. General benefits are factored at 2.0% of the total adjusted costs (see Finding 2 on pages 5-9 of this Report) with special benefits set at 98.0%. Article XIIID Section 4(b) of the California Constitution limits the levy of property assessments to costs attributed to special benefits only. The 2.0% general benefit cost is computed to be $11,679 with a resultant 98.0% special benefit limit computed at $572,261. *Based on current property data and land uses, this is the maximum amount of Year 1 (2024-25) revenue that can be derived from property assessments from the subject District.*

All program costs associated with general benefits will be derived from sources other than District assessments. Sample "other" revenue sources are shown in the following Table:

Special and General Benefit Revenue Sources

Revenue Source	Revenue	% of Total
District Assessments (Special Benefit Costs)	$572,261	98.0 %
Grants, donations, sponsors, program income, etc. (General Benefit Costs	$11,679	2.0%
TOTAL	**$583,940**	**100.0%**

Step 7. Calculate "Basic Unit Cost"

With a YR 1 - 2020 assessment revenue portion of the budget set at $572,261 (special benefit only), the Basic Unit Costs (rates) are shown earlier in Step 4. Since the District is proposed to be renewed for a 5-year term, maximum assessments for future years (2026-2029) must be set at the inception of the proposed renewed District. An annual inflationary assessment rate increase of up to 5%, commensurate to special benefits received by each assessed parcel, may be imposed for future year assessments, on approval by the District Property Owner's Association. The maximum assessment rates for the 5-year proposed renewed District term of 2025-2029 are shown in the Table below. The assessment rates listed constitute the maximum assessment rates that may be imposed for each year of the proposed renewed District term (2025-2029).

ODMD – 5 Year Maximum Assessment Rates
(Includes a 5%/Yr. Max Increase)

YEAR	BLDG ASSMT RATE ($/UNIT)	LAND ASSMT RATE 1 ($/UNIT)	LAND ASSMT RATE 2 ($/UNIT)	FRONTAGE ASSMT RATE ($/UNIT)
1	$0.1377	$397.8000	$0.0306	$4.5900
2	$0.1446	$417.6900	$0.0321	$4.8195
3	$0.1518	$438.5745	$0.0337	$5.0605
4	$0.1594	$447.3460	$0.0344	$5.3135
5	$0.1674	$456.2929	$0.0351	$5.5792

SAMPLE ASSESSMENT CALCULATION:

A 7,000 square foot lot with 50 linear feet of street frontage and a 5,000 square foot building on it

Bldg Area	= 5,000 SF x $0.1377	= $ 688.50
Land Area	= 7,000 SF x $0.0306 SF + $397.80	= $ 612.00
Street Frontage	= 50 LF x $4.59/LF	= $ 229.50
TOTAL YEAR 1 ASSESSMENT		= **$1,530.00**
	Per Month	= $ 128/Month
	Per Day	= $4.25/Day

The complete Year 1 – 2024-25 assessment roll of all parcels to be assessed by this PBID is included in this Report as Appendix I.

Step 8. Spread the Assessments

The resultant assessment spread calculation results for each parcel within the District are shown in this Report and the Management District Plan and were determined by applying the District assessment formula to each identified benefiting property.

Miscellaneous District Provisions

Time and Manner of Collecting Assessments:

Assessments for the Property Tax Year beginning July 1, 2024 and ending June 30, 2029, shall be collected at the same time and in the same manner as ad valorum taxes paid to the Ventura County (Operation Years 2025-2029). The District assessments shall appear as a separate line item on the property tax bills issued by the Ventura County Assessor. The City of Oxnard is authorized to collect any assessments not placed on the County tax rolls, or to place assessments, unpaid delinquent assessments, or penalties on the County tax rolls as appropriate to implement the Management District Plan.

Bonds:

No bonds are to be issued in conjunction with this proposed renewed District.

Duration

As allowed by State PBID Law, the District will have a five (5) year operational term from January 1, 2025 to December 31, 2029. The proposed renewed District operation is expected to begin services on January 1, 2025. If the District is not renewed, services will end on December 31, 2029.

APPENDIX 1

ODMD
YR 1 – 2024/2025
ASSESSMENT ROLL

APN			SITE ADDRESS	2024-25 ASSESSMENT	% OF TOTAL
2010113110	202	S	OXNARD BL	$3,971.91	0.694%
2010160010		N	OXNARD BL	$703.80	0.123%
2010160020		E	FOURTH ST	$666.56	0.116%
2010160030		E	FOURTH ST	$1,877.31	0.328%
2010160040		E	FOURTH ST	$500.71	0.087%

FY 2026-27 Assessment and Collection of Fees within the Oxnard Downtown Management District

Brenda Lopez, Director
Housing Department

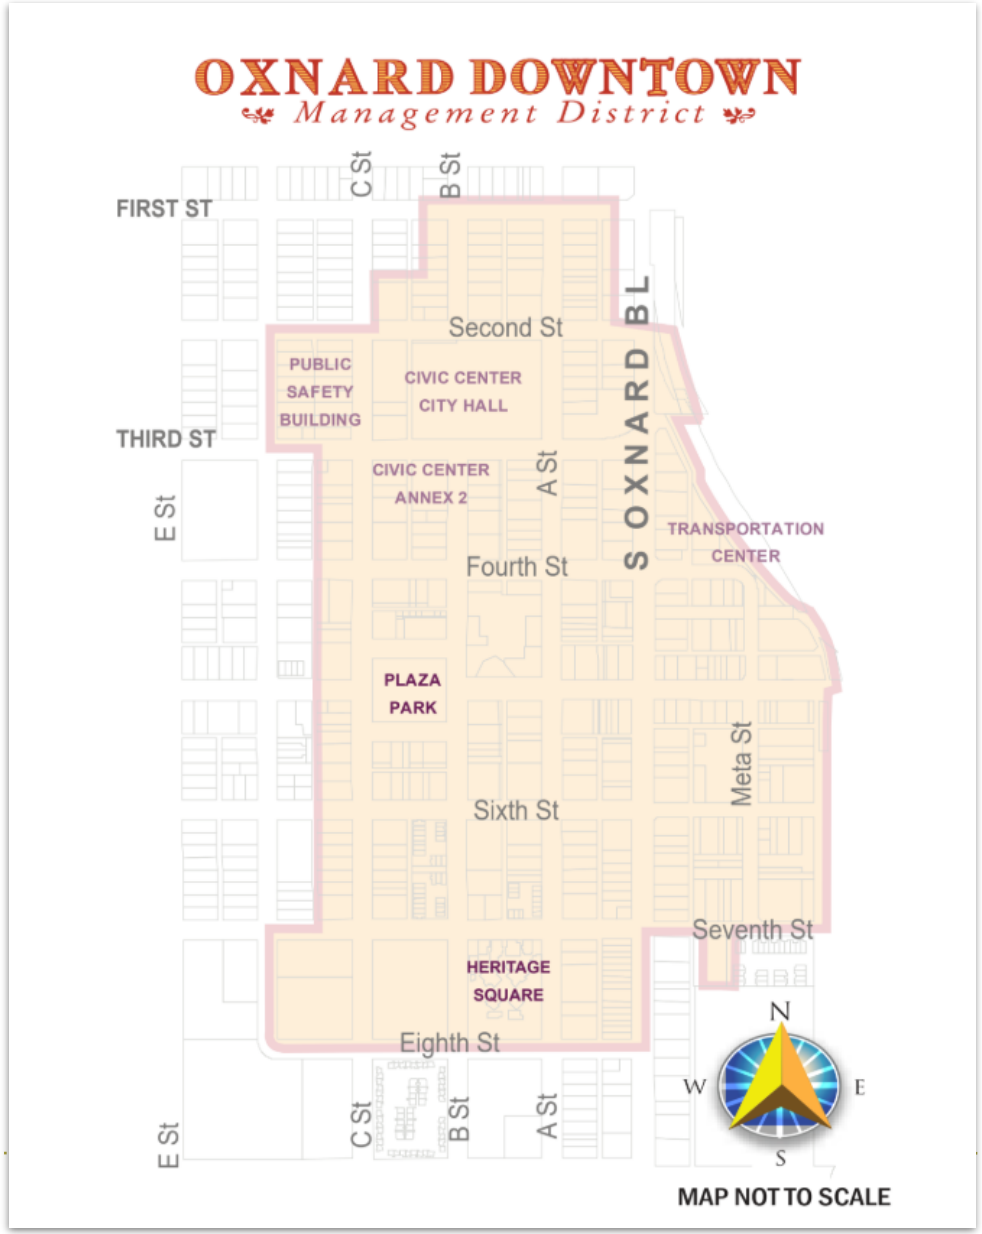
City Council
June 16, 2026

CITY OF OXNARD CALIFORNIA

Background

1. California Streets and Highway Code authorizes cities to establish property and business improvement districts ("PBIDs") and assess and collect fees on real property for the purpose of making improvements and promoting activities that benefit real property within the district.

2. The Oxnard Downtown Management District (the "District") was established in 2001 and has continually been re-renewed, with the most recent renewal taking place on July 2, 2024 for a 5-year period.



3. The renewal expanded the District boundaries to 32 blocks, encompassing 432 parcels.

4. The PBID is a unique benefit assessment district that enables the District property/business owners and residents, working as a unit, to continue to fund needed property and business related services, programs and improvement projects above what can and is provided by the City of Oxnard such as enhanced maintenance and security, business development, beautification and related management

5. The District is managed by the Downtown Oxnard Improvement Association (DOIA).

6. DOIA must submit Annual Assessment materials for Council approval.

District Map

FY 2026-27 Assessment

FY 2026/27 Assessment Revenue

$446,402.28 – Private Owners
$175,782.86 – Public Agencies
$622,185.14 Total Revenue

1. Formula is set forth in Management District Plan approved by City Council
2. 3% increase from the previous year

Use of Assessment

The District Plan identifies the following core programs:

1. **Civil Sidewalks**: Street cleaning and public safety program.

2. **District Identity and Placemaking**: Marketing of events and businesses, arts, and holiday displays.

3. **Administration**: Manages Districts day-to-day operations.

Financial Impact

1. The district assessments are collected by the County of Ventura with the property tax billing.
2. The County returns the assessment funds to the City, who then remits them to the DOIA.
3. The City will be responsible for properties owned by the City, Housing Authority, and Parking Authority.
4. The City's 2026-27 PBID Assessment is approximately $167,856.86 which is included in the proposed FY 2026-27 budget.

Recommendation

That the City Council adopt a resolution authorizing the assessment and collection of fees within the Oxnard Downtown Management District for Fiscal Year 2026-27.

CITY OF OXNARD CALIFORNIA

CITY COUNCIL AGENDA REPORT

REPORTS
AGENDA ITEM NO. N.3

DATE: June 16, 2026

TO: Housing Authority

FROM: Brenda Lopez, Housing Director, (805) 385-8092, brenda.lopez@oxnard.org

SUBJECT: Housing Authority Low Rent Public Housing and Housing Choice Voucher Program Budgets for Fiscal Year 2026-27.

RECOMMENDATION

That the Board of Commissioners of the Oxnard Housing Authority:

1. Adopt a resolution approving the recommended $8,056,418 operating budgets for the Low Rent Public Housing Program for Fiscal Year 2026-27, as presented for each project area, and approve and authorize the use of $277,566 of unrestricted cash to fund the projected deficit in the Central Office Cost Center; and
2. Adopt a resolution approving the recommended $36,597,778 operating budget for the Housing Choice Voucher Program for Fiscal Year 2026-27, and approve and authorize the use of $182,665 of unrestricted cash to fund the projected deficit.

(This item did not originate in Committee.)

Please click the following link to view the required Measure M pre-recorded presentation video: https://youtu.be/J3oqxdK_dIU

BACKGROUND

Annual Operating Budgets for the Low Rent Public Housing Program (LRPH) and the Housing Choice Voucher Program (HCV), commonly known as Section 8, are to be submitted by the Oxnard Housing Authority (OHA) to the United States Department of Housing and Urban Development (HUD) prior to the start of each fiscal year.

The LRPH budget pertains exclusively to the 528 public housing units that are owned and operated by the OHA. The program is subject to asset management regulations which require each public housing project to be funded and budgeted independently. Any expenses that cannot be tied directly to a public housing project are budgeted separately under the Central Office Cost Center (COCC). The LRPH program is funded primarily by two sources of income, including tenant rental income and operating subsidy from HUD. The amount of operating subsidy received is based upon a HUD-determined formula, which considers the estimated costs of running each Public Housing development and reduces that by the amount of tenant rental income received by each development.

As previously mentioned, the COCC collects all the indirect administrative costs that do not show a direct benefit to a project. These costs are offset by HUD's determined fee revenues generated from public housing, including management fees, bookkeeping fees, and asset management fees. A budget deficit in a public housing project may be offset by a surplus in another project. However, if there is a deficit in the COCC budget, it must be funded by the COCC's Unrestricted Cash & Investments reserves fund.

The HCV budget pertains exclusively to 1,864 Housing Choice Vouchers (not including forty-two Emergency Housing Vouchers and forty Mainstream Vouchers) administered by the OHA. The budget comprises two parts, including the

housing assistance payments paid to property owners to subsidize rent and the administrative fees used to operate the administration of the HCV program. Funding is provided by Congress annually through an appropriation process. Most agencies receive renewal funding each year, based on the number and cost of the authorized vouchers in use during the prior year, adjusted for inflation. Funding for new vouchers awarded to the agency and administrative costs are provided separately.

DISCUSSION

LRPH

The recommended income budget for the LRPH program is $8,420,096. This amount consists of an estimated COCC income of $1,298,035 and a $7,122,061 combined income total related to the public housing projects.

As outlined below, adopting the recommendation would generate a surplus in the public housing budget, whereas the COCC budget would incur a deficit.

Public Housing Projects:

Description	**Amount**
Income	$7,122,061
Expenses	$6,480,817
Net Income	$641,244

COCC:

Description	**Amount**
Income	$1,298,035
Expenses:	$1,575,601
Net Income	($277,566)

Efforts to reduce the COCC budget deficit over time include generating revenue by providing property management services for OHA-owned properties and closely monitoring opportunities to save on indirect costs. In addition, the OHA applied for HUD's Rental Assistance Demonstration (RAD) program, which allows for fungibility with other programs and offers an opportunity to generate income/surplus cash in the long run. If successful, the surplus may be distributable to the COCC.

The OHA has approximately $1,600,000 in the COCC Unrestricted Cash and Investments fund to cover the projected COCC budget deficiency for Fiscal Year 2026-27.

HCV

The recommended operating budget for the HCV program is $36,597,778. Of this amount, $33,169,152 consists of housing assistance payments, which are rental subsidies passed directly through the OHA from HUD to landlords. The HCV program's operating costs are funded by HUD through administrative fees. However, the administrative fees issued by HUD are not based on actual costs.

As described below, the operating budget, if adopted as recommended, would result in a deficit.

HCV:

Description	Amount
Administrative Fees	$3,245,961
Administrative Expenses	$3,428,626
Net Income	($182,665)

The OHA (as is the case with other public housing authorities) is not awarded enough funding to cover its operating costs. In 2020, the OHA launched the "rethink and renew" effort to identify, plan and implement strategic goals that will reduce the budget deficit over time. Some of the efforts undertaken include applying for new programs which have separate funding sources, streamlining processes, issuing project-based vouchers, and increasing lease up.

The OHA has approximately $3,200,000 in the HCV Program's Unrestricted Cash and Investments fund to cover the projected HCV budget deficiency Fiscal Year 2026-27.

STRATEGIC PRIORITIES

This agenda item supports the Organizational Effectiveness strategy. The purpose of the Organizational Effectiveness strategy is to reinforce, stabilize, improve, and strengthen the organizational foundation of the City in order to build a modern, high-functioning City government that effectively and efficiently supports the operating departments in providing high-quality services and programs for our residents and businesses.

FINANCIAL IMPACT

There is no financial impact to the General Fund for this recommendation.

The OHA has approximately $1,600,000 in the COCC Unrestricted Cash and Investments fund to cover the projected COCC budget deficiency of $277,566 for Fiscal Year 2026-27. The remaining balance will be $1,322,434.

The OHA has approximately $3,200,000 in the HCV Program's Unrestricted Cash and Investments fund to cover the projected HCV budget deficiency of $182,665 for Fiscal Year 2026-27. The remaining balance will be $3,017,335.

COMMITTEE OUTCOME

This item did not originate in Committee because it is a continuation of an item previously approved by City Council.

*Note: A budget deficit in a public housing project may be offset by a surplus in another project. However, if there is a deficit in the COCC budget, it must be funded by the COCC's Unrestricted Cash & Investments reserve fund.

HOUSING AUTHORITY OF THE CITY OF OXNARD

RESOLUTION NO. _____

A RESOLUTION OF THE BOARD OF COMMISSIONERS OF THE HOUSING AUTHORITY OF THE CITY OF OXNARD APPROVING AND ADOPTING THE LOW RENT PUBLIC HOUSING PROGRAM OPERATING BUDGETS FOR FISCAL YEAR 2026-2027

I. WHEREAS, the Housing Authority of the City of Oxnard ("OHA") has prepared the Low Rent Public Housing Program operating budgets now totaling $8,056,418 for the fiscal year 2026-2027; and

II. WHEREAS, the budgeted expenditures are necessary for the efficient and economical operation of OHA for the purpose of serving low-income families; and

III. WHEREAS, the budgets for the fiscal year 2026-2027 indicate a source of funding adequate to cover all proposed expenditures; and

IV. WHEREAS, the budgeted expenditures will be consistent with the provisions of law and the Annual Contribution Contract; and

V. WHEREAS, the United States Department of Housing and Urban Development requires OHA to certify that no OHA employee is serving in a variety of positions which will exceed a 100% allocation of their time.

NOW THEREFORE, the Board of Commissioners of the Housing Authority of the City of Oxnard resolves as follows:

1. That the Low Rent Public Housing Program Operating Budgets ("Operating Budgets") for the fiscal year 2026-2027 totaling $8,056,418 on file at the Housing Department and incorporated full herein by this reference is approved and adopted.

2. That no OHA employee reflected in the Operating Budgets is serving in a variety of positions which will exceed 100% allocation of their time.

APPROVED AND ADOPTED by the Board of Commissioners of the Housing Authority of the City of Oxnard at a regular meeting of said Board held on the 16th day of June, 2026 by the following vote:

Housing Authority Low Rent Public Housing and Housing Choice Voucher Program Budgets for Fiscal Year 2026-27

Brenda Lopez, Director
Housing Department

City Council
June 16, 2026

CITY OF OXNARD CALIFORNIA

FY 2026-27 Public Housing Budget Background

The Low Rent Public Housing Program (LRPH) budget pertains to the 528 public housing units owned and operated by the Oxnard Housing Authority (OHA)

1. The United States Department of Housing and Urban Development (HUD) requires program budgets to be submitted prior to the start of each fiscal year.
2. Each public housing project is funded and budgeted separately. Administrative costs that are not directly related to a public housing project must be budgeted separately under the Central Office Cost Center (COCC).
3. Budget comprises of: tenant rental income and operating subsidy from HUD.
4. The COCC budget expenses are offset by a combination of fee revenues such as management fees, bookkeeping fees, and asset management fees.

FY 2026-27 Housing Choice Voucher Budget Background

The Housing Choice Voucher Program (HCV), also referred to as Section 8, budget pertains to 1,864 Housing Choice Vouchers (does not include forty-two Emergency Housing Choice and forty Mainstream Vouchers) administered by the OHA.

1. Budget comprises of: housing assistance payments (HAP) which are rental subsidies passed directly through the OHA from HUD to property owners and administrative fees to the OHA.
2. Funding eligibility is based on the number of vouchers leased and a HUD established fee per unit leased (adjusted for inflation).
3. New voucher allocations awarded to the agency are funded separately.

FY 2026-27 Public Housing Budget Discussion

1. The recommended income budget for the LRPH program is $8,420,096. This amount consists of an estimated COCC income of $1,298,035 and a $7,122,061 combined income total related to the public housing projects.

2. Adopting the recommendation would generate a surplus in the public housing budget, whereas the COCC budget would incur a deficit.

Public Housing Projects Budget:

Description	**Amount**
Income	$7,122,061
Expenses	$6,480,817
Net Income	$641,244

FY 2026-27 Public Housing Budget Discussion Cont.

COCC Budget:

Description	Amount
Income	$1,298,035
Expenses	$1,575,601
Net Income	($277,566)

3. The OHA has approximately $1,600,000 in the COCC Unrestricted Cash and Investments fund to cover the projected COCC budget deficiency.

4. Efforts to reduce the COCC budget deficit over time include generating revenue by providing property management services for OHA-owned properties and closely monitoring opportunities to save on indirect costs. In addition, the OHA applied for HUD's Rental Assistance Demonstration (RAD) program which allows for fungibility with other programs and offers an opportunity to generate income/surplus cash in the long run. If successful, the surplus may be distributable to the COCC.

FY 2026-27 Housing Choice Voucher Budget Discussion

1. The recommended operating budget for the HCV program is $36,597,778. Of this amount, $33,169,152 consists of HAP, which are passed directly to landlords. If the operating budget is approved as recommended, there will be a deficit:

Description	**Amount**
Administrative Fees	$3,245,961
Administrative Expenses	$3,428,626
Net Income	($182,665)

2. The OHA has approximately $3,200,000 in the HCV Program's Unrestricted Cash and Investments fund to cover the projected HCV budget deficiency.

3. Since 2020, the OHA launched the "rethink and renew" effort to identify, plan and implement strategic goals that will reduce the budget deficit overtime. Some of the efforts undertaken include applying for new programs which have separate funding sources, streamlining processes, issuing project-based vouchers, and increasing lease up.

FY 2026-27 Oxnard Housing Authority Budgets

Financial Impact:

1. There is no financial impact to the General Fund.

2. The OHA has approximately $1,600,000 in the COCC Unrestricted Cash and Investments fund to cover the projected COCC budget deficiency of $277,566 for Fiscal Year 2026-27. The remaining balance will be $1,322,434.

3. The OHA has approximately $3,200,000 in the HCV Program's Unrestricted Cash and Investments fund to cover the projected HCV budget deficit of $182,665 for Fiscal Year 2026-27. The remaining balance will be $3,017,335.

Recommendation

That the Board of Commissioners of the Oxnard Housing Authority:

1. Adopt a resolution approving the recommended $8,056,418 operating budgets for the Low Rent Public Housing Program for Fiscal Year 2026-27, as presented for each project area, and approve and authorize the use of $277,566 of unrestricted cash to fund the projected deficit in the Central Office Cost Center; and

2. Adopt a resolution approving the recommended $36,597,778 operating budget for the Housing Choice Voucher Program for Fiscal Year 2026-27, and approve and authorize the use of $182,665 of unrestricted cash to fund the projected deficit.

CITY COUNCIL AGENDA REPORT

REPORTS
AGENDA ITEM NO. N.4

DATE: June 16, 2026

TO: City Council

FROM: Michael Wolfe, Public Works Director, (805) 385-8055, michael.wolfe@oxnard.org

SUBJECT: Fiscal Year (FY) 2026-27 Special Tax Levy for Community Facility Districts Numbers 1, 2, 3, 4, 5, 8, 9 and 2000-3.

RECOMMENDATION

That the City Council acting as the legislative body for Community Facilities Districts (CFD) No. 1, 2, 3, 4, 5, 8, 9 and 2000-3:

1. Adopt a resolution setting a special tax rate within CFD No. 1 (Westport at Mandalay Bay) for Fiscal Year 2026-27;
2. Adopt a resolution setting a special tax rate within CFD No. 2 (Westport at Mandalay Bay) for Fiscal Year 2026-27;
3. Adopt a resolution setting a special tax rate within CFD No. 3 (Seabridge at Mandalay Bay) for Fiscal Year 2026-27;
4. Adopt a resolution setting a special tax rate within CFD No. 4 (Seabridge at Mandalay Bay) for Fiscal Year 2026-27;
5. Adopt a resolution setting a special tax rate within CFD No. 5 (Riverpark) for Fiscal Year 2026-27;
6. Adopt a resolution setting special tax rates within CFD No. 8 (Sakioka Farms Business Park) for Fiscal Year 2026-27;
7. Adopt a resolution setting special tax rates within CFD No. 9 (North Shore at Mandalay Bay) for Fiscal Year 2026-27;
8. Adopt a resolution setting a special tax rate within CFD No. 2000-3 (Oxnard Boulevard/Highway 101 Interchange) for Fiscal Year 2026-27; and
9. Authorize the Public Works Director, or designee, to execute an agreement for Billing of Direct Assessments with the Ventura County Auditor-Controller to provide the service of placement of direct assessments on the Ventura County Secured Tax Roll.

(The Finance and Governance Committee approved recommendations 5 and 9, 3-0 and 1, 2, 3, 4, 6, 7, and 8, 2-1 on May 26, 2026.)

BACKGROUND

Special Districts is a Division of the Public Works Department and manages a total of 50 special financing districts, which include eight Community Facilities Districts (CFDs), commonly known as Mello-Roos Districts. Through the development process, special financing districts (e.g., CFDs) were authorized to be used by the qualified electors (i.e., property owners/developers) to finance the installation of public improvements and/or to provide funding for certain ongoing public services. A CFD can issue bonds to finance the construction of public improvements with a useful life of at least five years (e.g., public infrastructure, park, recreation, and open space facilities, school facilities, libraries, and

child care facilities). CFDs can also fund ongoing services such as police and fire protection, parks, parkways, open space maintenance, and flood and storm protection.

Typically, the developer constructed the public improvements at the time the project was developed and the property owners pay for the cost of the construction, cost of certain public services, and/or cost of maintaining the improvements through a special tax included on the annual property tax bill. Revenue from the special tax is used to make the annual debt service on the bonds, if applicable, and/or to fund the specified public services and maintenance of public improvements. The City's current CFDs are identified below:

District	Purpose	Resolution of Intention/Formation & Rate and Method of Apportionment (RMA)	Ordinance Levying Special Tax	Modification Initiative
CFD No. 1 Westport at Mandalay Bay	Issue bonds to finance public improvements	ROI No. 11,814 ROF No. 11,823 Amended ROF No. 12,081	No. 2541 No. 2591	N/A
CFD No. 2 Westport at Mandalay Bay	Maintenance services	ROI No. 11,815 ROF No. 11,825 Amended ROF No. 12,082	No. 2542 No. 2592	N/A
CFD No. 3 Seabridge at Mandalay Bay	Issue bonds to finance public improvements	ROI No. 12,715 ROF No. 12,737	No. 2676	Measure H (2018)
CFD No. 4 Seabridge at Mandalay Bay	Public improvements and maintenance services	ROI No. 12,716 Amended ROI No. 15,104 Amended ROI No. 15,139 ROF No. 12,739	No. 2677	Measure I (2018) Measure F (2018)
CFD No. 5 Riverpark	Public improvements and maintenance services	ROI No. 12,920 Amended ROF No. 12,936 (as amended by Ord. No. 3051)	No. 2701	Measure I (2024)
CFD No. 8 Sakioka Farms Business Park	Fire protection and maintenance services	No. 15,349	No. 2982	N/A
CFD No. 9 North Shore at Mandalay Bay	Public improvements and maintenance services	No. 15,492	No. 3004	N/A
CFD No. 2000-3 Oxnard Boulevard/Highway 101 Interchange	Issue bonds to finance public improvements	No. 12,019	No. 2570	N/A

DISCUSSION

The Mello-Roos Community Facilities Act of 1982 (the "Act") allows the formation of CFDs to finance the construction of public infrastructure improvements by the issuance of bonds and/or to fund certain public services and operation and maintenance of public improvements. The qualified electors within the boundaries of the CFDs approved the Rate and Method of Apportionment (RMA) at the time of the CFD's formation and authorized the levy of a special tax on their properties as security for repayment of bonds or to fund the services of the district. The RMA establishes the special tax formula (e.g., rate of annual adjustment, if any, etc.) and how the special tax is apportioned to properties included in each

CFD.

The special tax cannot be levied on the property tax roll, nor can adjustments be made to the maximum and applied rates, as previously authorized by the qualified electors, unless the City Council (as the Governing Body) authorizes such actions. Adoption of the resolutions sets the maximum and applied special tax rates, approves the calculation of the rates, and approves setting the rates that are placed on the annual tax roll for each CFD as prepared by the City's consultant, NBS.

The maximum special tax rate is the maximum amount that can be used to calculate the special tax levied on the property tax roll. The maximum rate is proposed to increase by the annual inflationary adjustment if the qualified electors have previously authorized an annual inflationary adjustment to the maximum rate. Otherwise, it remains unchanged.

The applied special tax rate is the amount that is used to calculate the special tax actually levied on the property tax roll. It is the amount necessary to fund the services of each CFD, including administration and reserves for the upcoming fiscal year. Specific to CFD 3, pursuant to the voter-approved Measure H (2018), the total amount of "overhead costs of employees of the City of Oxnard" that the CFD is allowed to fund is limited to $5,000 annually. This is factored into the calculation of the levy and the remaining costs for staff overhead expenses are funded via non-CFD funds. The applied special tax rate cannot exceed the maximum special tax rate.

The applied rates listed within the table below are the proposed rates to be applied within each District. The County will not apply a rate that does not divide evenly amongst all parcels within a district. Therefore, the total levy amount on the County tax roll will vary slightly from this number. The final tax rolls, as prepared by NBS and incorporated by reference within the attached resolutions, are attached to this staff report and are on file with the City Clerk's office.

Billing of Direct Assessments

The County of Ventura requires annual approval of an Agreement for Billing of Direct Assessments (attached) for services related to the inclusion of the special taxes/assessments on the Ventura County property tax bills. In the absence of this arrangement, the City will have to directly bill property owners for special taxes/assessments. This agreement is applicable to all assessment districts, Community Facilities Districts, and other special assessments administered by the City.

STRATEGIC PRIORITIES

This agenda item is a routine operational item or does not relate to the five strategic priorities adopted by City Council on March 16, 2021.

FINANCIAL IMPACT

Property owners pay the special tax as part of their annual property tax bill. The special tax, including annual adjustments where applicable, has been approved by the qualified electors through prior proceedings. Funds received for the benefit of each CFD are restricted and can only be used to fund the services and obligations of each district. For all districts except CFD 3, there is no General Fund contribution. Additionally, the General Fund is not liable for the bonds. The table below provides a summary of the proposed maximum and applied special tax rates for FY 2026-27. For comparison to the previous fiscal year's rates, please refer to attachment 1.

District	FY 2026-27		Applied Rate Annual Change	Qualified Elector Approved Annual Adjustment	Projected Principal Balance	Bond Maturity Date
	Maximum Rate	Applied Rate i, ii				
CFD No. 1 Westport at Mandalay Bay	$1,034,993.53	$609,540	-4.85%	2%	$4,415,000	9/1/2033
CFD No. 2 Westport at Mandalay Bay	$908,799.41	$646,800	10%	2%	N/A	N/A
CFD No. 3 Seabridge at Mandalay Bay	$3,146,571.63	$1,912,031	-0.002%	2%	$15,420,000	9/1/2035
CFD No. 4 Seabridge at Mandalay Bay	$1,455,603.39	$897,296	-5.4%	2%	N/A	N/A
CFD No. 5 Riverpark **iii**	$7,211,310.21 **iv**	$4,278,061	2.0%	2% to 5% **v**	N/A	N/A
CFD No. 8 Sakioka Farms Business Park	$856,557.13 **vi**	$509,237	4.07%	Varies **vii**	N/A	N/A
CFD No. 9 North Shore at Mandalay Bay	$927,169.89 **viii**	$41,100 **ix**	N/A **x**	2% to 5% **xi**	N/A	N/A
CFD No. 2000-3 Oxnard Boulevard/ Highway 101 Interchange	$921,278.22	$104,436	-80.08% **xii**	N/A	$2,840,000	9/1/2032

Table Notes:

i. Applied rate less than maximum due to a) availability of surplus funds to offset the special tax rate and/or b) expenses projected to be less than revenues that would be available if the maximum rate were applied. Applied rates are rounded to the nearest dollar. Applied rates may not match County roll due to the requirement to apply an even levy within all parcel categories.

ii. Subject to minor change depending on Ventura County's final assessment roll and rounding.

iii. Special tax applied first to developed parcels and then to undeveloped parcels, if necessary to meet the special tax requirement.

iv. Maximum Special Tax for developed parcels only. Maximum may fluctuate due to the development of undeveloped parcels.

v. CFD 5 Maximum Special Tax is adjusted within a range of 2% to 5% annually based on the December Consumer Price Index, All Urban Consumers Los Angeles, rate. Which was 3.01%.

vi. This is the combined total of the CFD 8 Maximum Special Tax and Contingent Special Tax rates.

vii. CFD 8 Maximum Special Tax and Contingent Special Tax are adjusted annually in an amount equal to the February Consumer Price Index, All Urban Consumers Los Angeles, rate, which was 2.932%.

viii. Maximum Rate for Services only shown as no other taxes will be levied in the District for FY 2026/27.

ix. Only the Services Special Tax is being levied for FY 2026/27.

x. First applied levy under the current Rate and Method of Apportionment.

xi. CFD 9 Maximum Services Special Tax, is adjusted within a range of 2% to 5% annually based on the April Consumer Price Index, All Urban Consumers Los Angeles, rate, which was 3.7%. The maximum Environmental Services

Special Tax, and Facilities Special Tax are each adjusted by 2% annually.
xii. Finance Department analysis determined there to be surplus fund balance which has been amortized and will be applied as a levy credit until bond maturity.

COMMITTEE OUTCOME

The Finance and Governance Committee voted 3-0 on May 26, 2026 to approve the staff recommendations for items 5 and 9 and to forward the item for Council approval.

The Finance and Governance Committee voted 2-1 on May 26, 2026 to approve the staff recommendations for items 1, 2, 3, 4, 6, 7, and 8 and to forward the item for Council approval.

CITY COUNCIL OF THE CITY OF OXNARD

RESOLUTION NO.

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD ACTING AS THE LEGISLATIVE BODY OF COMMUNITY FACILITIES DISTRICT NO. 1 (WESTPORT AT MANDALAY BAY) OF THE CITY OF OXNARD AUTHORIZING THE LEVY OF SPECIAL TAXES WITHIN COMMUNITY FACILITIES DISTRICT NO. 1 (WESTPORT AT MANDALAY BAY) FOR THE FISCAL YEAR 2026-27

WHEREAS, by its Resolution No. 11,823, as amended by its Resolution No. 12,081 (collectively the "Resolution of Formation"), the City Council of the City of Oxnard (the "City") established Community Facilities District No. 1 (Westport at Mandalay Bay) of the City of Oxnard ("CFD No. 1") pursuant to the Mello-Roos Community Facilities Act of 1982 (Section 53311 *et seq.* of the California Government Code) (the "Act"); and

WHEREAS, by its Ordinance No. 2541, as amended by Ordinance 2591 (collectively, the "Ordinance") the City Council authorized the levy of special taxes (the "Special Taxes") within CFD No. 1 to fund services and expenses authorized in the Resolution of Formation; and

WHEREAS, the City Council desires to cause the levy and collection of the Special Taxes for Fiscal Year 2026-27 for the purposes specified in the Resolution of Formation and the Ordinance, by the adoption of this resolution; and

WHEREAS, a Final Billing Detail Report has been prepared by NBS Financial Group ("NBS") listing each parcel in CFD No. 1 for which a levy of the Special Tax is proposed for Fiscal Year 2026-27 and the amount of the proposed Special Tax for Fiscal Year 2026-27 (the "Report"); and

WHEREAS, the proposed levy is in conformance with the requirements of Proposition 218 (Articles XIII C and XIII D of the California Constitution); and

WHEREAS, the proposed levy does not exceed the tax rate authorized by the Ordinance.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF OXNARD, ACTING IN ITS CAPACITY AS THE LEGISLATIVE BODY OF COMMUNITY FACILITIES DISTRICT NO. 1 (WESTPORT AT MANDALAY BAY), DOES HEREBY RESOLVE, DETERMINE AND ORDER AS FOLLOWS:

SECTION 1. The above recitals are true and correct.

SECTION 2. The special tax is imposed without regard to property valuation and is levied in compliance with the Act and the Ordinance.

SECTION 3. In accordance with the Act and the Ordinance, there is hereby levied upon the parcels within the CFD No. 1 the Special Taxes for Fiscal Year 2026-27 as shown in the Report, which is approved and on file in the Office of the City Clerk, available for public inspection, and

incorporated herein by reference. No Special Tax is levied upon any parcel that is exempt from taxation under applicable law. After adoption of this Resolution, the Chief Financial Officer of the City, or designee, may make any necessary modifications of the levy to correct any errors, omissions or inconsistencies in the listing or categorization of parcels to be taxed or in the amount to be charged to any category of parcels; provided, however, that any such modifications shall not result in an increase in the Special Tax applicable to any category of parcels and is made prior to the submission of the tax rolls to the Ventura County Auditor.

SECTION 4. Proceeds of the levy shall be used only as provided for in the Act and the Resolution of Formation.

SECTION 5. The levy shall be collected in the same manner as ordinary ad valorem taxes are collected and shall be subject to the same penalties and the same procedure and sale in cases of delinquency as provided for ad valorem taxes except as such procedure may be modified by law and by this City Council.

SECTION 6. The Chief Financial Officer or designee, is hereby authorized and directed to transmit a certified copy of this Resolution and of the Report to the Ventura County Auditor, together with other supporting documentation as may be required to place said special taxes on the secured property tax roll for the Fiscal Year 2026-27, and to perform all other acts which are required by the Act, the Ordinance, or by law in order to accomplish the purpose of this Resolution.

CITY COUNCIL OF THE CITY OF OXNARD

RESOLUTION NO.

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD ACTING AS THE LEGISLATIVE BODY OF COMMUNITY FACILITIES DISTRICT NO. 2 (WESTPORT AT MANDALAY BAY) OF THE CITY OF OXNARD AUTHORIZING THE LEVY OF SPECIAL TAXES WITHIN COMMUNITY FACILITIES DISTRICT NO. 2 (WESTPORT AT MANDALAY BAY) FOR THE FISCAL YEAR 2026-27

WHEREAS, by its Resolution No. 11,825, as amended by its Resolution No. 12,082 (collectively the "Resolution of Formation"), the City Council of the City of Oxnard (the "City") established Community Facilities District No. 2 (Westport at Mandalay Bay) of the City of Oxnard ("CFD No. 2") pursuant to the Mello-Roos Community Facilities Act of 1982 (Section 53311 *et seq.* of the California Government Code) (the "Act"); and

WHEREAS, by its Ordinance No. 2542, as amended by Ordinance 2592 (collectively, the "Ordinance") the City Council authorized the levy of special taxes (the "Special Taxes") within CFD No. 2 to fund services and expenses authorized in the Resolution of Formation; and

WHEREAS, the City Council desires to cause the levy and collection of the Special Taxes for Fiscal Year 2026-27 for the purposes specified in the Resolution of Formation and the Ordinance, by the adoption of this resolution; and

WHEREAS, a Final Billing Detail Report has been prepared by NBS Financial Group ("NBS") listing each parcel in CFD No. 2 for which a levy of the Special Tax is proposed for Fiscal Year 2026-27 and the amount of the proposed Special Tax for Fiscal Year 2026-27 (the "Report"); and

WHEREAS, the proposed levy is in conformance with the requirements of Proposition 218 (Articles XIII C and XIII D of the California Constitution); and

WHEREAS, the proposed levy does not exceed the tax rate authorized by the Ordinance.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF OXNARD, ACTING IN ITS CAPACITY AS THE LEGISLATIVE BODY OF COMMUNITY FACILITIES DISTRICT NO. 2 (WESTPORT AT MANDALAY BAY), DOES HEREBY RESOLVE, DETERMINE AND ORDER AS FOLLOWS:

SECTION 1. The above recitals are true and correct.

SECTION 2. The special tax is imposed without regard to property valuation and is levied in compliance with the Act and the Ordinance.

SECTION 3. In accordance with the Act and the Ordinance, there is hereby levied upon the parcels within the CFD No. 2 the Special Taxes for Fiscal Year 2026-27 as shown in the Report, which is approved and on file in the Office of the City Clerk, available for public inspection, and

incorporated herein by reference. No Special Tax is levied upon any parcel that is exempt from taxation under applicable law. After adoption of this Resolution, the Chief Financial Officer of the City, or designee, may make any necessary modifications of the levy to correct any errors, omissions or inconsistencies in the listing or categorization of parcels to be taxed or in the amount to be charged to any category of parcels; provided, however, that any such modifications shall not result in an increase in the Special Tax applicable to any category of parcels and is made prior to the submission of the tax rolls to the Ventura County Auditor.

SECTION 4. Proceeds of the levy shall be used only as provided for in the Act and the Resolution of Formation.

SECTION 5. The levy shall be collected in the same manner as ordinary ad valorem taxes are collected and shall be subject to the same penalties and the same procedure and sale in cases of delinquency as provided for ad valorem taxes except as such procedure may be modified by law and by this City Council.

SECTION 6. The Chief Financial Officer or designee, is hereby authorized and directed to transmit a certified copy of this Resolution and of the Report to the Ventura County Auditor, together with other supporting documentation as may be required to place said special taxes on the secured property tax roll for the Fiscal Year 2026-27, and to perform all other acts which are required by the Act, the Ordinance, or by law in order to accomplish the purpose of this Resolution.

CITY COUNCIL OF THE CITY OF OXNARD

RESOLUTION NO.

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD ACTING AS THE LEGISLATIVE BODY OF COMMUNITY FACILITIES DISTRICT NO. 3 (SEABRIDGE AT MANDALAY BAY) OF THE CITY OF OXNARD AUTHORIZING THE LEVY OF SPECIAL TAXES WITHIN COMMUNITY FACILITIES DISTRICT NO. 3 (SEABRIDGE AT MANDALAY BAY) FOR THE FISCAL YEAR 2026-27

WHEREAS, by its Resolution No. 12,737 (the "Resolution of Formation"), the City Council of the City of Oxnard (the "City") established Community Facilities District No. 3 (Seabridge at Mandalay Bay) of the City of Oxnard ("CFD No. 3") pursuant to the Mello-Roos Community Facilities Act of 1982 (Section 53311 *et seq.* of the California Government Code) (the "Act"); and

WHEREAS, by its Ordinance No. 2676 (the "Ordinance") the City Council authorized the levy of special taxes (the "Special Taxes") within CFD No. 3 to fund services and expenses authorized in the Resolution of Formation; and

WHEREAS, at a November 6, 2018 election, the voters of CFD No. 3 approved an amendment to Ordinance No. 2676, which amendment was set forth in the Council's Resolution No. 15,138; and

WHEREAS, references in this Resolution to the "Ordinance" refer to Ordinance No. 2676 as amended by the voters; and

WHEREAS, the City Council desires to cause the levy and collection of the Special Taxes for Fiscal Year 2026-27 for the purposes specified in the Resolution of Formation and the Ordinance, by the adoption of this resolution; and

WHEREAS, a Final Billing Detail Report has been prepared by NBS Financial Group ("NBS") listing each parcel in CFD No. 3 for which a levy of the Special Tax is proposed for Fiscal Year 2026-27 and the amount of the proposed Special Tax for Fiscal Year 2026-27 (the "Report"); and

WHEREAS, the proposed levy is in conformance with the requirements of Proposition 218 (Articles XIII C and XIII D of the California Constitution); and

WHEREAS, the proposed levy does not exceed the tax rate authorized by the Ordinance.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF OXNARD, ACTING IN ITS CAPACITY AS THE LEGISLATIVE BODY OF COMMUNITY FACILITIES DISTRICT NO. 3 (SEABRIDGE AT MANDALAY BAY), DOES HEREBY RESOLVE, DETERMINE AND ORDER AS FOLLOWS:

SECTION 1. The above recitals are true and correct.

SECTION 2. The special tax is imposed without regard to property valuation and is levied in compliance with the Act and the Ordinance.

SECTION 3. In accordance with the Act and the Ordinance, there is hereby levied upon the parcels within the CFD No. 3 the Special Taxes for Fiscal Year 2026-27 as shown in the Report, which is approved and on file in the Office of the City Clerk, available for public inspection, and incorporated herein by reference. No Special Tax is levied upon any parcel that is exempt from taxation under applicable law. After adoption of this Resolution, the Chief Financial Officer of the City, or designee, may make any necessary modifications of the levy to correct any errors, omissions or inconsistencies in the listing or categorization of parcels to be taxed or in the amount to be charged to any category of parcels; provided, however, that any such modifications shall not result in an increase in the Special Tax applicable to any category of parcels and is made prior to the submission of the tax rolls to the Ventura County Auditor.

SECTION 4. Proceeds of the levy shall be used only as provided for in the Act and the Resolution of Formation.

SECTION 5. The levy shall be collected in the same manner as ordinary ad valorem taxes are collected and shall be subject to the same penalties and the same procedure and sale in cases of delinquency as provided for ad valorem taxes except as such procedure has been modified by law and this City Council as set forth in the Indenture Between CFD No. 3 and Wells Fargo Bank, National Association, as Fiscal Agent dated as of October 1, 2005.

SECTION 6. As a cumulative remedy, if any amount levied as a special tax for payment of bond interest or principal, together with any penalties and other charges accruing under this Resolution, are not paid when due, the City Council may, not later than four years after the due date of the last installment of principal on the Bonds, order that the same be collected by an action brought in the superior court to foreclose the lien of such special tax.

SECTION 7. The Chief Financial Officer or designee, is hereby authorized and directed to transmit a certified copy of this Resolution and of the Report to the Ventura County Auditor, together with other supporting documentation as may be required to place said special taxes on the secured property tax roll for the Fiscal Year 2026-27, and to perform all other acts which are required by the Act, the Ordinance, or by law in order to accomplish the purpose of this Resolution.

CITY COUNCIL OF THE CITY OF OXNARD

RESOLUTION NO.

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD ACTING AS THE LEGISLATIVE BODY OF COMMUNITY FACILITIES DISTRICT NO. 4 (SEABRIDGE AT MANDALAY BAY) OF THE CITY OF OXNARD AUTHORIZING THE LEVY OF SPECIAL TAXES WITHIN COMMUNITY FACILITIES DISTRICT NO. 4 (SEABRIDGE AT MANDALAY BAY) FOR THE FISCAL YEAR 2026-27

WHEREAS, by its Resolution No. 12,739 (the "Resolution of Formation"), the City Council of the City of Oxnard (the "City") established Community Facilities District No. 4 (Seabridge at Mandalay Bay) of the City of Oxnard ("CFD No. 4") pursuant to the Mello-Roos Community Facilities Act of 1982 (Section 53311 *et seq*. of the California Government Code) (the "Act"); and

WHEREAS, by its Ordinance No. 2677 (the "Ordinance") the City Council authorized the levy of special taxes (the "Special Taxes") within CFD No. 4 to fund services and expenses authorized in the Resolution of Formation; and

WHEREAS, at a November 6, 2018 election, the voters of CFD No. 4 approved an amendment to Ordinance No. 2677, which amendment was set forth in the Council's Resolution No. 15,104; and

WHEREAS, at a November 6, 2018 election, the voters of CFD No. 4 also approved another amendment to Ordinance No. 2677, which amendment was set forth in the Council's Resolution No. 15,139; and

WHEREAS, references in this Resolution to the "Ordinance" refer to Ordinance No. 2677 as amended by the voters; and

WHEREAS, the City Council desires to cause the levy and collection of the Special Taxes for Fiscal Year 2026-27 for the purposes specified in the Resolution of Formation and the Ordinance, by the adoption of this resolution; and

WHEREAS, a Final Billing Detail Report has been prepared by NBS Financial Group ("NBS") listing each parcel in CFD No. 4 for which a levy of the Special Tax is proposed for Fiscal Year 2026-27 and the amount of the proposed Special Tax for Fiscal Year 2026-27 (the "Report"); and

WHEREAS, the proposed levy is in conformance with the requirements of Proposition 218 (Articles XIII C and XIII D of the California Constitution); and

WHEREAS, the proposed levy does not exceed the tax rate authorized by the Ordinance.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF OXNARD, ACTING IN ITS CAPACITY AS THE LEGISLATIVE BODY OF COMMUNITY FACILITIES DISTRICT NO.

4 (SEABRIDGE AT MANDALAY BAY), DOES HEREBY RESOLVE, DETERMINE AND ORDER AS FOLLOWS:

SECTION 1. The above recitals are true and correct.

SECTION 2. The special tax is imposed without regard to property valuation and is levied in compliance with the Act and the Ordinance.

SECTION 3. In accordance with the Act and the Ordinance, there is hereby levied upon the parcels within the CFD No. 4 the Special Taxes for Fiscal Year 2026-27 as shown in the Report, which is approved and on file in the Office of the City Clerk, available for public inspection, and incorporated herein by reference. No Special Tax is levied upon any parcel that is exempt from taxation under applicable law. After adoption of this Resolution, the Chief Financial Officer of the City, or designee, may make any necessary modifications of the levy to correct any errors, omissions or inconsistencies in the listing or categorization of parcels to be taxed or in the amount to be charged to any category of parcels; provided, however, that any such modifications shall not result in an increase in the Special Tax applicable to any category of parcels and is made prior to the submission of the tax rolls to the Ventura County Auditor.

SECTION 4. Proceeds of the levy shall be used only as provided for in the Act and the Resolution of Formation.

SECTION 5. The levy shall be collected in the same manner as ordinary ad valorem taxes are collected and shall be subject to the same penalties and the same procedure and sale in cases of delinquency as provided for ad valorem taxes except as such procedure may be modified by law and by this City Council.

SECTION 6. The Chief Financial Officer or designee, is hereby authorized and directed to transmit a certified copy of this Resolution and of the Report to the Ventura County Auditor, together with other supporting documentation as may be required to place said special taxes on the secured property tax roll for the Fiscal Year 2026-27, and to perform all other acts which are required by the Act, the Ordinance, or by law in order to accomplish the purpose of this Resolution.

CITY COUNCIL OF THE CITY OF OXNARD

RESOLUTION NO.

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD ACTING AS THE LEGISLATIVE BODY OF COMMUNITY FACILITIES DISTRICT NO. 5 (RIVERPARK) OF THE CITY OF OXNARD AUTHORIZING THE LEVY OF SPECIAL TAXES WITHIN COMMUNITY FACILITIES DISTRICT NO. 5 (RIVERPARK) FOR THE FISCAL YEAR 2026-27

WHEREAS, by its Resolution No. 12,936 (the "Resolution of Formation"), the City Council of the City of Oxnard (the "City") established Community Facilities District No. 5 (Riverpark) of the City of Oxnard ("CFD No. 5") pursuant to the Mello-Roos Community Facilities Act of 1982 (Section 53311 *et seq.* of the California Government Code) (the "Act"); and

WHEREAS, by its Ordinance No. 2701 (the "Ordinance") the City Council authorized the levy of special taxes (the "Special Taxes") within CFD No. 5 to fund services and expenses authorized in the Resolution of Formation; and

WHEREAS, at a November 5, 2024 election, the voters of CFD No. 5 approved an amendment to Resolution No. 2701, which amendment was set forth in the Council's Ordinance No. 3051; and

WHEREAS, references in this Resolution to the "Ordinance" refer to Ordinance No. 2701 as amended by the voters; and

WHEREAS, the City Council desires to cause the levy and collection of the Special Taxes for Fiscal Year 2026-27 for the purposes specified in the Resolution of Formation and the Ordinance, by the adoption of this resolution; and

WHEREAS, a Final Billing Detail Report has been prepared by NBS Financial Group ("NBS") listing each parcel in CFD No. 5 for which a levy of the Special Tax is proposed for Fiscal Year 2026-27 and the amount of the proposed Special Tax for Fiscal Year 2026-27 (the "Report"); and

WHEREAS, the proposed levy is in conformance with the requirements of Proposition 218 (Articles XIII C and XIII D of the California Constitution); and

WHEREAS, the proposed levy does not exceed the tax rate authorized by the Ordinance.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF OXNARD, ACTING IN ITS CAPACITY AS THE LEGISLATIVE BODY OF COMMUNITY FACILITIES DISTRICT NO. 5 (RIVERPARK), DOES HEREBY FIND, RESOLVE, DETERMINE, AND ORDER AS FOLLOWS:

SECTION 1. The foregoing recitals, and each of them, are true and correct.

SECTION 2. The special tax is imposed without regard to property valuation and is levied in compliance with the Act and the Ordinance.

SECTION 3. In accordance with the Act and the Ordinance, there is hereby levied upon the parcels within the CFD No. 5 the Special Taxes for Fiscal Year 2026-27 as shown in the Report, which is approved and on file in the Office of the City Clerk, available for public inspection, and incorporated herein by reference. No Special Tax is levied upon any parcel that is exempt from taxation under applicable law. After adoption of this Resolution, the Chief Financial Officer of the City, or designee, may make any necessary modifications of the levy to correct any errors, omissions or inconsistencies in the listing or categorization of parcels to be taxed or in the amount to be charged to any category of parcels; provided, however, that any such modifications shall not result in an increase in the Special Tax applicable to any category of parcels and is made prior to the submission of the tax rolls to the Ventura County Auditor.

SECTION 4. Proceeds of the levy shall be used only as provided for in the Act and the Resolution of Formation.

SECTION 5. The levy shall be collected in the same manner as ordinary ad valorem taxes are collected and shall be subject to the same penalties and the same procedure and sale in cases of delinquency as provided for ad valorem taxes except as such procedure may be modified by law and by this City Council.

SECTION 6. The Chief Financial Officer or designee, is hereby authorized and directed to transmit a certified copy of this Resolution and of the Report to the Ventura County Auditor, together with other supporting documentation as may be required to place said special taxes on the secured property tax roll for the Fiscal Year 2026-27, and to perform all other acts which are required by the Act, the Ordinance, or by law in order to accomplish the purpose of this Resolution.

CITY COUNCIL OF THE CITY OF OXNARD

RESOLUTION NO.

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD ACTING AS THE LEGISLATIVE BODY OF COMMUNITY FACILITIES DISTRICT NO. 8 (SAKIOKA FARMS) OF THE CITY OF OXNARD AUTHORIZING THE LEVY OF SPECIAL TAXES WITHIN COMMUNITY FACILITIES DISTRICT NO. 8 (SAKIOKA FARMS BUSINESS PARK) FOR THE FISCAL YEAR 2026-27

WHEREAS, by its Resolution No. 15,349 (the "Resolution of Formation"), the City Council of the City of Oxnard (the "City") established Community Facilities District No. 8 (Sakioka Farms Business Park) of the City of Oxnard ("CFD No. 8") pursuant to the Mello-Roos Community Facilities Act of 1982 (Section 53311 *et seq.* of the California Government Code) (the "Act"); and

WHEREAS, by its Ordinance No. 2982 (the "Ordinance") the City Council authorized the levy of special taxes (the "Special Taxes") within CFD No. 8 to fund services and expenses authorized in the Resolution of Formation; and

WHEREAS, the City Council desires to cause the levy and collection of the Special Taxes for Fiscal Year 2026-27 for the purposes specified in the Resolution of Formation and the Ordinance, by the adoption of this resolution; and

WHEREAS, a Final Billing Detail Report has been prepared by NBS Financial Group ("NBS") listing each parcel in CFD No. 8 for which a levy of the Special Tax is proposed for Fiscal Year 2026-27 and the amount of the proposed Special Tax for Fiscal Year 2026-27 (the "Report"); and

WHEREAS, the proposed levy is in conformance with the requirements of Proposition 218 (Articles XIII C and XIII D of the California Constitution); and

WHEREAS, the proposed levy does not exceed the tax rate authorized by the Ordinance.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF OXNARD, ACTING IN ITS CAPACITY AS THE LEGISLATIVE BODY OF COMMUNITY FACILITIES DISTRICT NO. 8 (SAKIOKA FARMS BUSINESS PARK), DOES HEREBY RESOLVE, DETERMINE AND ORDER AS FOLLOWS:

SECTION 1. The above recitals are true and correct.

SECTION 2. The special tax is imposed without regard to property valuation and is levied in compliance with the Act and the Ordinance.

SECTION 3. In accordance with the Act and the Ordinance, there is hereby levied upon the parcels within the CFD No. 8 the Special Taxes for Fiscal Year 2026-27 as shown in the Report, which is approved and on file in the Office of the City Clerk, available for public

inspection, and incorporated herein by reference. No Special Tax is levied upon any parcel that is exempt from taxation under applicable law. After adoption of this Resolution, the Chief Financial Officer of the City, or designee, may make any necessary modifications of the levy to correct any errors, omissions or inconsistencies in the listing or categorization of parcels to be taxed or in the amount to be charged to any category of parcels; provided, however, that any such modifications shall not result in an increase in the Special Tax applicable to any category of parcels and is made prior to the submission of the tax rolls to the Ventura County Auditor.

SECTION 4. Proceeds of the levy shall be used only as provided for in the Act and the Resolution of Formation.

SECTION 5. The levy shall be collected in the same manner as ordinary ad valorem taxes are collected and shall be subject to the same penalties and the same procedure and sale in cases of delinquency as provided for ad valorem taxes except as such procedure may be modified by law and by this City Council.

SECTION 6. The Chief Financial Officer or designee, is hereby authorized and directed to transmit a certified copy of this Resolution and of the Report to the Ventura County Auditor, together with other supporting documentation as may be required to place said special taxes on the secured property tax roll for the Fiscal Year 2026-27, and to perform all other acts which are required by the Act, the Ordinance, or by law in order to accomplish the purpose of this Resolution.

CITY COUNCIL OF THE CITY OF OXNARD

RESOLUTION NO.

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD ACTING AS THE LEGISLATIVE BODY OF COMMUNITY FACILITIES DISTRICT NO. 9 (NORTHSHORE AT MANDALAY BAY) OF THE CITY OF OXNARD AUTHORIZING THE LEVY OF SPECIAL TAXES WITHIN COMMUNITY FACILITIES DISTRICT NO. 9 (NORTHSHORE AT MANDALAY BAY) FOR THE FISCAL YEAR 2026-27

WHEREAS, by its Resolution No. 15,492 (the "Resolution of Formation"), the City Council of the City of Oxnard (the "City") established Community Facilities District No. 9 (Northshore at Mandalay Bay) of the City of Oxnard ("CFD No. 9") pursuant to the Mello-Roos Community Facilities Act of 1982 (Section 53311 *et seq.* of the California Government Code) (the "Act"); and

WHEREAS, by its Ordinance No. 3004 (the "Ordinance") the City Council authorized the levy of special taxes (the "Special Taxes") within CFD No. 9 to fund services and expenses authorized in the Resolution of Formation; and

WHEREAS, the City Council desires to cause the levy and collection of the Special Taxes for Fiscal Year 2026-27 for the purposes specified in the Resolution of Formation and the Ordinance, by the adoption of this resolution; and

WHEREAS, a Final Billing Detail Report has been prepared by NBS Financial Group ("NBS") listing each parcel in CFD No. 9 for which a levy of the Special Tax is proposed for Fiscal Year 2026-27 and the amount of the proposed Special Tax for Fiscal Year 2026-27 (the "Report"); and

WHEREAS, the proposed levy is in conformance with the requirements of Proposition 218 (Articles XIII C and XIII D of the California Constitution); and

WHEREAS, the proposed levy does not exceed the tax rate authorized by the Ordinance.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF OXNARD, ACTING IN ITS CAPACITY AS THE LEGISLATIVE BODY OF COMMUNITY FACILITIES DISTRICT NO. 9 (NORTHSHORE AT MANDALAY BAY), DOES HEREBY FIND, RESOLVE, DETERMINE, AND ORDER AS FOLLOWS:

SECTION 1. The foregoing recitals, and each of them, are true and correct.

SECTION 2. The special tax is imposed without regard to property valuation and is levied in compliance with the Act and the Ordinance.

SECTION 3. In accordance with the Act and the Ordinance, there is hereby levied upon the parcels within the CFD No. 9 the Special Taxes for Fiscal Year 2026-27 as shown in the Report, which is approved and on file in the Office of the City Clerk, available for public inspection, and incorporated herein by reference. No Special Tax is levied upon any parcel that is exempt from taxation under applicable law. After adoption of this Resolution, the Chief Financial Officer of the City, or designee, may make any necessary modifications of the levy to correct any errors, omissions or inconsistencies in the listing or categorization of parcels to be taxed or in the amount to be charged to any category of parcels; provided, however, that any such modifications shall not result in an increase in the Special Tax applicable to any category of parcels and is made prior to the submission of the tax rolls to the Ventura County Auditor.

SECTION 4. Proceeds of the levy shall be used only as provided for in the Act and the Resolution of Formation.

SECTION 5. The levy shall be collected in the same manner as ordinary ad valorem taxes are collected and shall be subject to the same penalties and the same procedure and sale in cases of delinquency as provided for ad valorem taxes except as such procedure may be modified by law and by this City Council.

SECTION 6. The Chief Financial Officer or designee, is hereby authorized and directed to transmit a certified copy of this Resolution and of the Report to the Ventura County Auditor, together with other supporting documentation as may be required to place said special taxes on the secured property tax roll for the Fiscal Year 2026-27, and to perform all other acts which are required by the Act, the Ordinance, or by law in order to accomplish the purpose of this Resolution.

CITY COUNCIL OF THE CITY OF OXNARD

RESOLUTION NO.

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD, ACTING AS LEGISLATIVE BODY OF COMMUNITY FACILITIES DISTRICT NO. 2000-3 (OXNARD BOULEVARD/HIGHWAY 101 INTERCHANGE), SETTING THE LEVY OF AN ANNUAL SPECIAL TAX FOR SUCH COMMUNITY FACILITIES DISTRICT FOR FISCAL YEAR 2026-27

WHEREAS, by its Resolution No. 12,019 (the "Resolution of Formation"), the City Council of the City of Oxnard (the "City") established Community Facilities District No. 2000-3 (Oxnard Boulevard/Highway 101 Interchange) of the City of Oxnard ("CFD No. 2000-3") pursuant to the Mello-Roos Community Facilities Act of 1982 (Section 53311 *et seq.* of the California Government Code) (the "Act"); and

WHEREAS, by its Ordinance No. 2570 (the "Ordinance") the City Council authorized the levy of special taxes (the "Special Taxes") within CFD No. 2000-3 to fund services and expenses authorized in the Resolution of Formation; and

WHEREAS, the City Council desires to cause the levy and collection of the Special Taxes for Fiscal Year 2026-27 for the purposes specified in the Resolution of Formation and the Ordinance, by the adoption of this resolution; and

WHEREAS, a Final Billing Detail Report has been prepared by NBS Financial Group ("NBS") listing each parcel in CFD No. 2000-3 for which a levy of the Special Tax is proposed for Fiscal Year 2026-27 and the amount of the proposed Special Tax for Fiscal Year 2026-27 (the "Report"); and

WHEREAS, the proposed levy is in conformance with the requirements of Proposition 218 (Articles XIII C and XIII D of the California Constitution); and

WHEREAS, the proposed levy does not exceed the tax rate authorized by the Ordinance.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF OXNARD, ACTING AS THE LEGISLATIVE BODY OF COMMUNITY FACILITIES DISTRICT NO. 2000-3 (OXNARD BOULEVARD/HIGHWAY 101 INTERCHANGE), AS FOLLOWS:

SECTION 1. The above recitals are true and correct.

SECTION 2. The special tax is imposed without regard to property valuation and is levied in compliance with the Act and the Ordinance.

SECTION 3. In accordance with the Act and the Ordinance, there is hereby levied upon the parcels within the CFD No. 2000-3 the Special Taxes for Fiscal Year 2026-27 as shown in the Report, which is approved and on file in the Office of the City Clerk, available for public

inspection, and incorporated herein by reference. No Special Tax is levied upon any parcel that is exempt from taxation under applicable law. After adoption of this Resolution, the Chief Financial Officer of the City, or designee, may make any necessary modifications of the levy to correct any errors, omissions or inconsistencies in the listing or categorization of parcels to be taxed or in the amount to be charged to any category of parcels; provided, however, that any such modifications shall not result in an increase in the Special Tax applicable to any category of parcels and is made prior to the submission of the tax rolls to the Ventura County Auditor.

SECTION 4. Proceeds of the levy shall be used only as provided for in the Act and the Resolution of Formation.

SECTION 5. The levy shall be collected in the same manner as ordinary ad valorem taxes are collected and shall be subject to the same penalties and the same procedure and sale in cases of delinquency as provided for ad valorem taxes except as such procedure may be modified by law and by this City Council.

SECTION 6. The Chief Financial Officer or designee, is hereby authorized and directed to transmit a certified copy of this Resolution and of the Report to the Ventura County Auditor, together with other supporting documentation as may be required to place said special taxes on the secured property tax roll for the Fiscal Year 2026-27, and to perform all other acts which are required by the Act, the Ordinance, or by law in order to accomplish the purpose of this Resolution.

(Note: <u>Must</u> be submitted on agency letterhead.)

AGREEMENT FOR BILLING OF DIRECT ASSESSMENTS

This Agreement For Billing of Direct Assessments ("Agreement") is made and entered into between the *Ventura County Auditor-Controller and* _____ ("Agency") to provide the service of placement of direct assessments on the Secured Tax Roll and distribution of collections to the ***Agency.***

I. PROPERTY TAX SERVICES

Ventura County will place direct assessments on the Secured Tax Roll and distribute collections to the ***Agency*** at the same time and in the same manner as Ventura County property taxes are collected and distributed, and as authorized by law. The ***Agency*** will adhere to the policies and procedures established by the Ventura County Auditor-Controller as outlined in the Direct Assessment Submission Letter.

II. FEES FOR SERVICES

For billing, collection, correction and administration of direct assessments, the Ventura County Auditor-Controller shall collect the following charges:

A. A Direct Assessment Line Fee for the original submission will be charged **$0.40** per assessment per parcel set by the County via resolution by the Board of Supervisors at its annual Countywide Rates and Fees public hearing.

B. For correction or removal of direct assessments requested by the ***Agency*** after extension of the tax roll, the Ventura County Auditor-Controller will collect **$30.00** per correction or removal. All corrections and removals must be submitted by the third Friday in February.

C. An administration and collection fee shall be charged in an amount not to exceed one-fourth of 1 percent of amounts collected.

D. Collection fees and charges herein provided are subject to adjustment by the County via resolution of the Board of Supervisors at its annual Countywide Rates and Fees public hearing. The Ventura County Auditor-Controller reserves the right to increase or decrease any charges herein provided, in proportion to any

changes in costs incurred by the Auditor-Controller in providing the services described herein, provided that written notice of any increase or decrease in charges is given to the ***Agency.***

III. COLLECTION OF AUDITOR-CONTROLLER FEES

Direct Assessment billing, correction and removal charges are deducted once a year, in the April Secured Apportionment. Collection and administrative fees are deducted from each Apportionment distribution.

IV. REQUESTS FOR INFORMATION AND ACCOUNTING SERVICES

The Ventura County Auditor-Controller publishes a report of direct assessments levied for the tax year by parcel to the Auditor-Controller's website in January, May and July. Requests for information and accounting services beyond what is posted to the Website will be considered extended services and will be subject to additional charges and fees.

V. AUTHORITY FOR LEVY AND COMPLIANCE WITH LAW

The authority for any levy, (i.e. resolution, ordinance or election), shall accompany requests for the levy of direct assessments. The ***Agency*** warrants that the taxes, fees, or assessments imposed by the ***Agency*** and collected pursuant to this Agreement comply with all requirements of state law, including but not limited to Articles XIIIC and XIIID of the California Constitution (Proposition 218).

The ***Agency*** hereby releases and forever discharges Ventura County and its officials, officers, agents, representatives and employees from any and all claims, demands, liabilities, costs and expenses, damages, causes of action, and judgments in any manner arising out of the ***Agency's*** responsibilities and representations under this Agreement or other action taken by the ***Agency*** in establishing a special tax, fee, or assessment and implementing collection of special taxes, fees, or assessments, as contemplated in and/or pursuant to this Agreement, including disputes related to lien priority.

The ***Agency*** further agrees to and shall defend, indemnify and hold harmless Ventura County and its officials, officers, agents, representatives and employees ("indemnified parties") from any and all claims, demands, liabilities, costs and expenses, damages, causes of action and judgments in any manner arising out of any of the ***Agency's*** responsibilities and representations under this Agreement, or other action taken by the ***Agency*** in establishing a special tax, fee, or assessment and implementing collection of special taxes, fees, or assessments as contemplated in and/or pursuant to this Agreement, including disputes related to lien priority.

If any judgment is entered against any indemnified party as a result of action taken to implement this Agreement, the ***Agency*** agrees that Ventura County may offset the amount of any judgment paid by any indemnified party from any monies collected by Ventura County on the ***Agency's*** behalf, including property taxes, special taxes, fees, or assessments. Ventura County may, but is not required to, notify the ***Agency*** of its intent to implement any offset authorized by this paragraph.

VI. TERMS OF AGREEMENT

Upon execution, this Agreement terminates, supersedes and replaces all prior agreements between Ventura County Auditor-Controller and the ***Agency*** pertaining to the collection of direct assessments. This Agreement shall continue from year to year and shall be subject to cancellation by either party by giving a thirty-day written notice of cancellation to the other party.

VII. AUTHORITY

The above terms are accepted by the ***Agency*** and the undersigned further certifies that he/she is authorized to sign this Agreement and bind the ***Agency*** to its terms.

Fiscal Year 2026-27 Special Tax Levy for Community Facilities Districts No. 1, 2, 3, 4, 5, 8, 9, and 2000-3

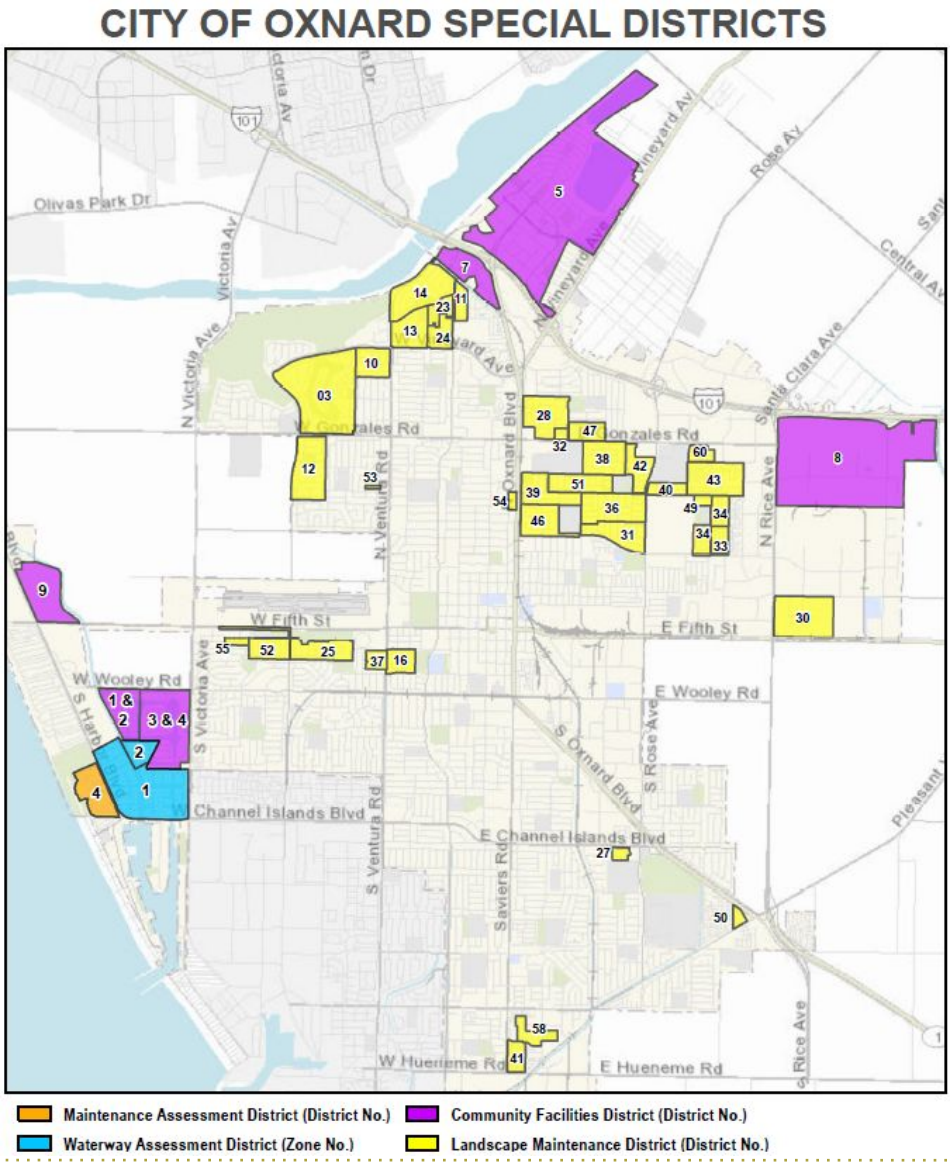
City Council
June 16, 2026

Anthony Miller
Special Districts Manager

CITY OF OXNARD CALIFORNIA

RECOMMENDATION

That the City Council acting as the legislative body for Community Facilities Districts (CFD) No. 1, 2, 3, 4, 5, 8, 9, and 2000-3:



1. Adopt a resolution setting a special tax rate within CFD No. 1 (Westport at Mandalay Bay) for Fiscal Year 2026-27;
2. Adopt a resolution setting a special tax rate within CFD No. 2 (Westport at Mandalay Bay) for Fiscal Year 2026-27;
3. Adopt a resolution setting a special tax rate within CFD No. 3 (Seabridge at Mandalay Bay) for Fiscal Year 2026-27;
4. Adopt a resolution setting a special tax rate within CFD No. 4 (Seabridge at Mandalay Bay) for Fiscal Year 2026-27;
5. Adopt a resolution setting a special tax rate within CFD No. 5 (Riverpark) for Fiscal Year 2026-27;

RECOMMENDATION

That the City Council acting as the legislative body for Community Facilities Districts (CFD) No. 1, 2, 3, 4, 5, 8, 9, and 2000-3:

6. Adopt a resolution setting special tax rates within CFD No. 8 (Sakioka Farms Business Park) for Fiscal Year 2026-27;
7. Adopt a resolution setting special tax rates within CFD No. 9 (North Shore at Mandalay Bay) for Fiscal Year 2026-27;
8. Adopt a resolution setting a special tax rate within CFD No. 2000-3 (Oxnard Boulevard/Highway 101 Interchange) for Fiscal Year 2026-27; and
9. Authorize the Public Works Director, or designee, to execute an agreement for Billing of Direct Assessments with the Ventura County Auditor-Controller to provide the service of placement of direct assessments on the Ventura County Secured Tax Roll.

MAP OF SPECIAL DISTRICTS

Additional information can be found at: oxnard.gov/public-works/special-districts

BACKGROUND

- Special Districts is a Division of the Public Works Department and manages a total of 50 special financing districts which includes eight Community Facilities Districts (CFDs), commonly known as Mello-Roos Districts.

- Through the development process, special financing districts (e.g. CFDs) were authorized to be used by the qualified electors (i.e. property owners/developers) to finance the installation of public improvements and/or to provide funding for certain ongoing public services.

- A CFD can issue bonds to finance the construction of public improvements with a useful life of at least five years (e.g. public infrastructure, park, recreation, and open space facilities, school facilities, libraries, and child care facilities).

BACKGROUND

- CFDs can also fund ongoing services such as police and fire protection, parks, parkways, open space maintenance, and flood and storm protection.

- Typically, the developer constructed the public improvements at the time the project was developed and the property owners pay for the cost of the construction, cost of certain public services, and/or cost of maintaining the improvements through a special tax included on the annual property tax bill.

- Revenue from the special tax is used to make the annual debt service on the bonds, if applicable, and/or to fund the specified public services and maintenance of public improvements.

BACKGROUND

District	Purpose	Resolution of Intention/Formation & Rate and Method of Apportionment (RMA)	Ordinance Levying Special Tax	Modification Initiative
CFD No. 1 Westport at Mandalay Bay	Issue bonds to finance public improvements	ROI No. 11,814 ROF No. 11,823 Amended ROF No. 12,081	No. 2541 No. 2591	N/A
CFD No. 2 Westport at Mandalay Bay	Maintenance services	ROI No. 11,815 ROF No. 11,825 Amended ROF No. 12,082	No. 2542 No. 2592	N/A
CFD No. 3 Seabridge at Mandalay Bay	Issue bonds to finance public improvements	ROI No. 12,715 ROF No. 12,737	No. 2676	Measure H (2018)
CFD No. 4 Seabridge at Mandalay Bay	Public improvements and maintenance services	ROI No. 12,716 Amended ROI No. 15,104 Amended ROI No. 15,139 ROF No. 12,739	No. 2677	Measure I (2018) Measure F (2018)
CFD No. 5 Riverpark	Public improvements and maintenance services	ROI No. 12,920 Amended ROF No. 12,936 (as amended by Ord. No. 3051)	No. 2701	Measure I (2024)
CFD No. 8 Sakioka Farms Business Park	Fire protection and maintenance services	No. 15,349	No. 2982	N/A
CFD No. 9 North Shore at Mandalay Bay	Public improvements and maintenance services	No. 15,492	No. 3004	N/A
CFD No. 2000-3 Oxnard Boulevard/Highway 101 Interchange	Issue bonds to finance public improvements	No. 12,019	No. 2570	N/A

DISCUSSION

- The Mello-Roos Community Facilities Act of 1982 allows the formation of CFDs to finance the construction of public infrastructure improvements by the issuance of bonds and/or to fund certain public services and operation and maintenance of public improvements.

- The qualified electors within the boundaries of the CFDs approved the Rate and Method of Apportionment (RMA) at the time of the CFD's formation and authorized the levy of a special tax on their properties as security for the repayment of bonds or to fund the services of the district.

- The RMA establishes the special tax formula (e.g. rate of annual adjustment, if any, etc.) and how the special tax is apportioned to properties included in each CFD.

DISCUSSION

- The special tax cannot be levied on the property tax roll, nor can adjustments be made to the maximum and applied rates, as previously authorized by the qualified electors, unless the City Council authorizes such actions.

- Adoption of the resolutions sets the maximum and applied special tax rates, approves the calculation of the rates, and approves setting the rates that are placed on the annual tax roll for each CFD.

- The applied special tax rate is the amount that is used to calculate the special tax actually levied on the property tax roll. It is the amount necessary to fund the services of each CFD, including administration and reserves for the upcoming fiscal year.

DISCUSSION

- Specific to CFD 3, pursuant to the voter-approved Measure H (2018), the total amount of "overhead costs of employees of the City of Oxnard" that the CFD is allowed to fund is limited to $5,000 annually.

- This is factored into the calculation of the levy and the remaining costs for staff overhead expenses are funded via non-CFD funds.

- The applied special tax rate cannot exceed the maximum special tax rate.

- The applied rates listed within the staff report are anticipated rates to be applied within each District. Unless changed prior to their presentation to the full Council, they will be reflected in the final tax roll prepared by NBS and incorporated by reference in the attached resolutions.

DISCUSSION

Billing of Direct Assessments

- The County of Ventura requires annual approval of an Agreement for Billing of Direct Assessments for services related to the inclusion of the special taxes/assessments on the Ventura County property tax bills. In the absence of this arrangement, the City will have to directly bill property owners for special taxes/assessments.

- This agreement is applicable to all assessment districts, Community Facilities Districts and other special assessments administered by the City.

FINANCIAL IMPACT

- Property owners pay the special tax as part of their annual property tax bill. The special tax, including annual adjustments where applicable, has been approved by the qualified electors through prior proceedings.
- Funds received for the benefit of each CFD are restricted and can only be used to fund the services and obligations of each district.
- For all districts except CFD 3, there is no General Fund contribution related to these districts.
- The General Fund is not liable for the bonds.

FINANCIAL IMPACT

- The following table provides a summary of the proposed maximum and applied special tax rates for FY 2026-27.

District	FY 2026-27		Applied Rate Annual Change	Qualified Elector Approved Annual Adjustment	Projected Principal Balance
	Maximum Rate	Applied Rate			
CFD No. 1 Westport at Mandalay Bay	$1,034,993.53	$609,540	-4.85%	2%	$4,415,000
CFD No. 2 Westport at Mandalay Bay	$908,799.41	$646,800	10%	2%	N/A
CFD No. 3 Seabridge at Mandalay Bay	$3,146,571.63	$1,899,380	-0.86%	2%	$15,420,000

CITY OF OXNARD CALIFORNIA

CITY COUNCIL AGENDA REPORT

REPORTS
AGENDA ITEM NO. N.5

DATE: June 16, 2026

TO: City Council

FROM: Javier Chagoyen-Lazaro, Chief Financial Officer, (805) 200-5400, javier.chagoyenlazaro@oxnard.org

SUBJECT: Adoption of Fiscal Year 2026-27 Proposed Budget.

RECOMMENDATION

That the City Council adopt the following resolutions:

a. A Resolution of the City Council of the City of Oxnard Approving the City Operating and Capital Improvement Budget for Fiscal Year 2026-27; and
b. A Resolution of the City Council of the City of Oxnard Authorizing Full-Time Equivalent Positions in the City Service Effective July 1, 2026, in accordance with the Operating Budget for the Fiscal Year 2026-27; and
c. A Resolution of the City Council of the City of Oxnard Authorizing Classification and Salary Schedules and Approving the attached Classification and Salary Schedule; and
d. A Resolution of the City Council of the City of Oxnard Establishing Financial Management Policies; and
e. A Resolution of the City Council of the City of Oxnard Establishing an Appropriation Limit for the Fiscal Year 2026-27; and
f. A Resolution of the City Council of the City of Oxnard Adopting a Master Fee Schedule

BACKGROUND

EXECUTIVE SUMMARY

Since the publication of the staff report, which was presented to City Council on June 1, 2026, for the FY 2026-27 Budget Public Hearing, there have been changes in total revenues and total expenditures. Those changes are explained below and are incorporated into the staff recommendation.

Modifications Since Publishing of June 1, 2026 Council Agenda

Measure O Committee Outcome

On May 28, 2026, the Measure O Citizen Oversight Committee met to review the proposed Measure O Fiscal Year 2026-27 proposed budget. The Committee approved the Measure O budget as presented, subject to any changes to specific projects or programs, made by the City Council for inclusion in the budget adoption.

Public Hearing Outcome

A Public Hearing regarding the Fiscal Year 2026-27 Operating and Capital Budget was conducted by the City Council and Housing Authority on June 1, 2026. There were no public speakers. During the Public Hearing meeting, Council members discussed funding reallocation from the General Fund and Measure O Fund for certain capital projects, and align the funding in the proposed budget with the priorities identified in the CIP adopted on May 19, 2026. Additionally, the City Council discussed the funding for other one-time expenditures for the General Fund. This report has included staff understanding of City Council direction and this section references the individual items that were taken in consideration for the latest version of the FY 2026-27 proposed budget.

1. General Fund (101) - Expenditure updates - CIP reallocation and Council directed funding

   Total net change: Appropriation increase by $455,000.
   CIP reallocation - Net Increase of $25,000: Project decreases: $4.3 million - Citywide Alleyway Resurfacing/Reconstruction (funding moved to Measure O), $2 million - Oxnard PD HQ Parking Lot Rehab, $1.1 million - Oxnard Fire Station Overhead Doors Replacement, $0.75 million - Bridge Maintenance Citywide and $0.4 million - Campus Park Phase III. Project Increases $4.4 million - Arterial Street Resurfacing, $4.2 million - Neighborhood Street Resurfacing (funding moved from Measure O)
   Council Directed funding - Total Increase of $430,000: $100,000 - PD citation printers, $60,000 - PD psychologist services, $30,000 - Comm Dev Code Compliance overtime, $100,000 - Recreation temporary labor hours, $110,000 - Recreation youth development programs, $30,000 - Cultural Arts Oxnard Arts Academy

2. Measure O (Fund 104) - CIP reallocation only (no net change to proposed amounts)

   Total net change: No change in appropriation.
   CIP reallocation- Project decreases: $4.2 million - Neighborhood Street Resurfacing (funding replaced with General Fund), $0.1 million - Oxnard PD Sturgis Annex - New Generator. Project increases: $4.3 million - Citywide Alleyway Resurfacing/Reconstruction (funding moved from General Fund)

3. Special Districts - Revenue updates

   Decrease in Bond Assessment Districts (Fund 500) revenues in the amount of $707,760 and an increase in Special Districts (Fund 120) of $15,573 to align to updated consultant provided estimates.

As a result of modifications one and three, the All Funds Revenue is proposed at $610.5 million (a decrease of $0.7 million compared to what was reported on the June 1, 2026 Council Agenda), and All Funds Expenditures are now proposed at $655.8 million (an increase of $0.4 million).

If there are any changes or updates between the date of publishing this report and the Council's June 16th budget adoption meeting, staff will orally state those at the meeting for the Council's consideration.

Once a final budget is approved, staff will then incorporate all Council-approved changes into the final digital online Adopted Budget that will be available to the public via the City's website:
https://www.oxnard.gov/finance/budget/fiscal-year-2026-2027-budget

This agenda report covers the projected revenues, expenditures, and available fund balances for the City's six major funds, including the General Fund, Measure O (Half-Cent Sales Tax) Fund, Water Fund group, Wastewater Fund group, Golf Fund and Environmental Resources (Solid Waste) Fund group. The Citywide Proposed Expenditure Budget is approximately $655.8 million, which includes the General Fund group, landscape maintenance and community facilities district funds, special revenue funds, assessment district funds, enterprise funds, and internal service funds. The Housing Authority's budget (not part of the City All Funds total) is proposed at $44.7 million. The total budget appropriation amount will include transfers to capital projects amounting to $61.4 million. All Funds Revenues are proposed at $610.5 million. The difference between proposed expenditures and proposed revenue will be funded by the existing available fund balance in the respective funds.

The figures presented represent the City of Oxnard funds, excluding the Housing Authority, which is scheduled as an Info/Consent item for City Council approval tonight

Capital Improvement Program (CIP)

Public Works staff presented the update to the five-year Capital Improvement Program for Fiscal Years 2027-31 to the Public Works and Transportation Committee on April 28, 2026 and to City Council on May 19, 2026.

The proposed budget for FY 2026-27 includes recommended CIP Project funding totaling $9.6 million from the General Fund and $8.2 million from Measure O. Other CIP funding sources include $13.1 million from Development Impact Fees (Fund 350) and $2.3 million from Quimby Fees (Fund 351). All CIP projects and funding sources included in the proposed budget are listed in the CIP section of the digital online budget. Prioritizations resulting from May 19, 2026 City Council deliberations and June 1, 2026 City Council decisions resulted in the following funding reassignments: Neighborhood Street Resurfacing: $4.2 million – General Fund and $3.9 million – Measure O; Citywide Alleyway Resurfacing/Reconstruction: $4.3 million – Measure O; Arterial Street Resurfacing: $4.4 million – General Fund.

Special Districts

The budget and assessment process for Special Districts is unique and requires additional steps from many of the other City operating budgets. The City Council reviews and approves the FY 2026-27 operating budget for each of the special financing districts through the annual assessment process. This year, Public Works staff anticipates the annual assessment process to take place at the City Council meetings on June 1, 2026, June 16, 2026, and June 30, 2026 (if needed). Once these annual assessment procedures are concluded, the approved special districts' operating budgets will be included into the overall City operating budget for FY 2026-27.

Note: Amounts shown throughout this report may not sum up to the exact totals shown in the PowerPoint presentation due to rounding differences.

CITY ACCOMPLISHMENTS

The City of Oxnard continues to deliver key services aligned with Council Priorities, with some highlights below:

- Public Safety:
  - Fire Emergency Response: Responded to more than 21,719 emergency calls, resulting in approximately 33,439 individual unit responses. Maintained a Class 2/2X ISO rating (top 3-5% nationally).
  - Community Preparedness Presentations: Conducted 16 preparedness presentations for over 275 attendees and 19 community events with engagement by over 500 people.
  - Homelessness Response & Engagement: The HLOs responded to and/or initiated over 6,611 calls for service, subject stops, traffic stops, and special requests submitted via email, text, 311, or telephone to address complaints of transient encampments or other homelessness issues.

- Quality of Life:
  - Community Cleanup Efforts: Hosted 24 neighborhood cleanups serving 40 neighborhoods.

○ Community Services: Hosted major community events including the Tamale Festival and Insect Fest; continued the Library's reinvention efforts which have resulted in a 50% increase in foot traffic, 183% increase in circulation, 113% increase in programs offered, and 84% increase in program attendance.

- Infrastructure and Natural Resources:
  - ○ Water: Treated and delivered approximately 20 million gallons of safe and reliable drinking water daily.
  - ○ Wastewater: Treated approximately 6.4 billion gallons of wastewater.
  - ○ Stormwater: Inspected and cleaned approximately 4,870 catch basins.
  - ○ Infrastructure Maintenance: Repaired or patched 1,433 potholes and pruned 3,726 trees.
  - ○ Street Improvements: Completed construction of major arterial resurfacing projects, including Hueneme Road, Gonzales Road, and Oxnard Boulevard.

- Economic Development:
  - ○ Development Processing: Performed over 23,000 building inspections, issued approximately 500 encroachment permits, and issued nearly 5,000 building permits.
  - ○ Housing: Oversaw the completion of 270 units of affordable housing.

- Organizational Effectiveness:
  - ○ Drafted a wide range of ordinances and resolutions this year, covering tenant protections, rent stabilization updates, solid waste rates, public safety regulations, environmental standards, and multiple other Council-directed policy areas.
  - ○ Citywide cybersecurity prioritization included awareness training for all city staff, improved multifactor authentication for Police mobile devices, and upgraded badge access systems for several City and Police buildings.
  - ○ Financial Stewardship: The City has received nine S&P credit rating upgrades in the past four years, and all major funds now hold ratings of A or better, including the City's AA- issuer rating and A+ ratings for Water and Wastewater.
  - ○ Sustainability: The City continues to implement its 2022 CAAP and is making plans for a solar and battery storage system and to further develop its EV charging infrastructure. These efforts will continue to help save the city money while helping the environment.

For the FY 2026-27 Proposed Budget, staff continue to acknowledge challenges including the various impacts of House of Representatives 1 (Public Law No. 119-21) and the war-driven price of petroleum which makes economic forecasting extremely difficult. We are also facing another state budget shortfall (~$20B) which will again cause downstream struggles to all cities. Camarillo's new Costco has now opened its gas station and the store is expected to be online at the end of the calendar year. Finally, the 2029 termination of the Measure O half-cent sales (transactions and use) tax is right around the corner.

These challenges continue to influence the City's conservative approach in the recommended budget, slowing the pace of investing in infrastructure and enhancing the quality of life. While there has been a decline in Franchise fees and Transient Occupancy Tax, with Business License and Cannabis tax remaining stable, overall the City continues to benefit from increases in a number of general tax categories, most notably sales tax, as a result of the Amazon Fulfillment Center operating within the City limits over the last few years. However, as mentioned in past budgets, pending State efforts to reallocate the sales taxes generated by fulfillment centers, and the opening of a Costco store in a neighboring city, will negatively impact the City's sales tax revenue in the upcoming years.

Recent geopolitical events are impacting the economy in ways that are making it harder to project interest rates under the new Federal Reserve Chair, making interest revenue a less reliable funding source in the future, and potentially impacting future borrowing costs. Staff will continue to apply the principles of safety, liquidity, and yield when investing City funds, and will monitor the changing interest rate environment, while recommending limited additions of ongoing programs and one-time projects in the budget, which are described in the following major fund areas.

Since the voter's approval of Measure E in 2020, the City has been able to overcome a $9.2 million structural deficit

and has been on a path to restore services by maintaining adequate public safety, restoring proper paving street cycles, improving cybersecurity, and maintaining financial stability. These restorations have continued to be measured with the Proposed Budget for FY 2026-27 recommending a 5.5% General Fund increase ($13 .4 million) in expenditures, primarily in one-time expenses funded with Available Fund Balance from FY 2025-26.

Despite the many needs for the city, the recommended increases within the General Fund reflect mandates, contractual obligations, and are mainly one-time expenditures. For example, despite needing to replace over 23 police vehicles, additional capital project needs, and recreation & arts needs, staff recommendations are centered around limited General Fund expenditure increases tied to mandatory requirements, and other one-time expenditures.

Similarly, staff continues to recommend one-time expenditures within the Measure O half-cent sales (transactions and use) tax, as well as implementation of the Council approved Measure O Weaning Schedule. This approach reflects the long-term planning strategy to address the termination of the Measure O half-cent sales tax on March 31, 2029. This approach has allowed for one-time funding of projects, primarily capital improvement projects, within Measure O. The FY 2025-26 Adopted Budget included a $1.7 million Measure O decrease in revenues compared to the FY 2024-25 Adopted Budget. The Proposed Budget for FY 2026-27 is recommending a modest increase of $0.3 million in revenues to $20.2 million, and recommended expenditures of $19.5 million.

In addition, staff recommends leaving the $14.9 million Recession Protection Fund (RPF) intact. The RPF was created in the FY 2025-26 Budget through one-time available funds at the time.

Lasting Impact of Bond Litigation

Oxnard City Council approved on October 17, 2022, a not to exceed $36,000,000 of Series 2022A (Tax Exempt) bonds to support Street projects and $9,000,000 Series 2022B (Federally Taxable) bonds to support additional implementation phases of the City's ERP. Issuing debt service is a strategic tool utilized by cities across the nation to implement CIP projects, while maintaining reserves, and aligning the benefits provided to the community by major infrastructure projects with how to pay for the cost to execute those projects.

In 2022, litigation was brought against the City that effectively halted the issuance of those bonds, forcing the City to limit or delay the scope of certain projects supported by the bond financing and fund the modified projects with existing reserves. This litigation caused the City to:

- Miss historically low interest rates.
- Cash fund ERP and Street projects primarily through Measure O instead of through Bond Payments.
- Prevented the City's ability to pay for other community-needed services and projects and also limited the number of streets that could be repaired.
    - If these projects were bond-financed the cost would be approximately $3M in one fiscal year rather than approximately $17.5M year over year.
    - In the FY 25-26 Adopted Budget, there was $3 million in reduced CIP funding from the General Fund.

In April 2025, the California Court of Appeal ruled in favor of the City of Oxnard, affirming the legality of the City's bond mechanisms, and removing the legal barriers to using lease-leaseback financing for large-scale public capital improvements. The City welcomed the Court ruling. However, the current interest rate environment demonstrates that the City lost an opportunity to use low-cost financing to improve City infrastructure.

Recruitment and hiring efforts in compliance with Government Code 3502.3

Assembly Bill (AB) 2561 added Government Code Section 3502.3 to the Meyers-Milias-Brown Act (MMBA). This law mandates that local public agencies in California annually report staffing vacancies and recruitment efforts to promote transparency and address ongoing staffing shortages in the public sector. If vacancies within a single bargaining unit reach or exceed 20% of the total authorized full-time positions, and upon request by the recognized employee organization, the agency must provide additional information during a public hearing.

As of May 1, 2026, the City of Oxnard's overall vacancy rate for allocated positions stands at 9.35% (the single highest bargaining unit vacancy is International Union of Operating Engineers at 14.46%). The overall vacancy rate

is a reduction from last year's vacancy rate of 9.66%. Vacancy rates across all bargaining units remain well below the 20% threshold. In the Fiscal Year 2025-26, the City hired 89 new employees, promoted 110 existing staff members, and experienced 91 separations. We currently have 140.25 total vacant positions and 45 active job postings.

DISCUSSION

The following is information about the FY 2026-27 proposed budget for each of the major funds. The Environmental Resources fund includes the third year of approved multiyear rates, the Water fund reflects the fourth year of the multiyear water rates adopted by City Council, while Wastewater and Golf continue to budget for the expenditures necessary to maintain infrastructure and deliver services similar to last year's budget. Capital programs are proposed with revenue availability, staff capacity, and funding deadlines taken into consideration.

General Fund (101)

The City has made significant progress towards fiscal sustainability since facing a structural budget deficit of $9.2 million in 2019. Today, the City anticipates an available fund balance of approximately $12.7 million by the end of FY 2025-26. While the available fund balance is an important milestone, we should consider this as one-time funding that is attributed to the sales tax allocation from the single Amazon Fulfillment Center, and one-time funding from Federal and State grants, and slightly higher interest earnings. This one-time available fund balance provides the necessary buffer that can help the City mitigate the impact of the economic uncertainties generated by the federal economic policies, and staff recommends to appropriate those funds in FY 2026-27 proposed budget for one-time projects while maintaining the recession protection fund in abeyance as we navigate upcoming challenges.

Revenues

General Fund revenues are projected at $247.0 million, $3.4 million (1.4%) greater than the prior year Adopted Budget. The projected change is primarily due to a $3.5 million increase in general taxes, with non-tax revenue decreasing by $0.1 million from the prior year Adopted Budget.

Sales tax revenue is projected to grow by $3.3 million, with the 1% Bradley Burns sales tax adding an additional $2.2 million (3.7%) in Fiscal Year 2026-27 compared to the prior year's adopted budget. The 1.5% Measure E local sales and use tax is projected to increase by $1.0 million (1.8%) with respect to the prior year's adopted budget.

Property values have fluctuated in 2026; the median home price in Oxnard decreased 1.6% to $765,000 in March 2026 compared to March 2025. The City's revenue projection for its portion of levied property tax, including real property transfer tax for FY 2026-27, is projected to grow by $1.4 million (1.9%) to $77.3 million.

Franchise Tax revenue is projected to decrease in FY 2026-27 to $3.3 million, a decrease of $1.6 million, or 32.6%, compared to the FY 2025-26 Adopted Budget. The decrease is driven by lower natural gas prices projected to continue over the fiscal year.

Finally, non-tax revenues are projected to decrease by $0.1 million (0.3%) lower compared to last fiscal year's Adopted Budget, primarily a result of conservative estimates on future interest rates and lower plan checks and inspection fee revenue.

Expenditures

Total General Fund proposed expenditures are projected at $257.1 million, including $9.6 million of one-time projects paid with available fund balance. The FY 2026-27 Proposed Budget represents a $13.4 million (5.5%) increase compared to the FY 2025-26 Adopted Budget of $243.7 million. Of this total $257.1 million expenditure projection, $0.3 million is included as mandatory one-time items related to election costs and zero emission vehicle acquisition requirements, $9.6 million is recommended as one-time CIP funding and $2.1 million is recommended to fund one-time critical needs, largely comprised of Public Safety acquisition of vehicles, motorcycles, radios, citation

printers, disaster preparedness costs and other services (total of $1.4 million), as well as $0.2 million for anticipated legal costs and other miscellaneous supplies, training, and services (total of $0.5 million). After adjusting for total one-time related funding recommendations of $12.0 million, the FY 2026-27 proposed General Fund expenditure budget is $245.1 million, which is $1.9 million below General Fund ongoing revenues of $247.0 million. Most importantly, the recommended ongoing amounts, with ongoing expenditures slightly below ongoing revenues, ensures prudent growth with no structural imbalance.

The FY 2026-27 Proposed Budget includes $3.9 million, across all departments, in ongoing expenditures in relation to employee pay and benefit increases for all represented (per existing MOUs) and unrepresented employees, as applicable, $3.2 million additional funding for the City's Internal Service Funds (ISF) – primarily driven by higher insurance costs. The General Fund required CalPERS UAL (Unfunded Accrued Liability) contribution increased by $1.0 million. There is a net General Fund impact in positions of 6.17 FTE additions (7.25 FTE additions minus 1.08 FTE deletions) as well as various reclassifications, resulting in a net cost of $0.8 million. Various position funding reallocations from Measure O (per approved weaning schedule), grant or other funds based on reassignment of staff for services provided under the General Fund total $1.3 million.

Departmental increases, include $5.4 million in Public Safety budgets with the Oxnard Police Department increasing by $4.3 million for items including: one-time vehicle and motorcycle acquisition costs of $0.8 million, one-time citation printer costs of $0.1 million, ongoing costs including $0.06 million in psychologist services, $1.7 million in approved (MOU) salary and benefit increases, $0.3 million increase in Ventura County Animal Shelter costs, and increased Internal Service Funds costs of $1.3 million, primarily due to rising liability insurance and workers compensation insurance costs. The Fire Department proposed increase of $1.1 million in funding includes: one-time increases totaling $0.4 million related to disaster preparedness, radio acquisition, plan check consulting costs and mutual aid overtime, and ongoing increased labor costs of $1.2 million in approved (MOU) salary and benefit increases, including 3.9 FTEs shifted to the General Fund ($0.5 million) from expiring grant funding, and $0.5 million in increased Internal Service Fund costs, mainly from rising liability insurance and workers compensation costs, partially offset by reduced proposed capital spending of $1.0 million.

Public Works increase in proposed funding is $4.0 million, mainly due to increased one-time CIP funding of $1.9 million, increased ongoing labor costs of $0.8 million, including $0.6 million in approved (MOU) salary and benefit increases, $0.2 million increases resulting from shifts in FTE allocations from reassignment of engineering staff for services provided under the General Fund and weaning of Measure O funds (0.8 FTE per approved MO weaning schedule), utilities adjustments due to inflation of $0.2 million, $0.3 million in increased Internal Service Fund costs, mainly from rising liability insurance, $0.2 million increase for Riverpark landscaping ballfield maintenance, zero emission vehicle leasing of $0.3 million and $0.3 million for one-time outfitting of zero emission vehicles plus one vehicle replacement.

Community and Cultural Services proposes an additional $1.5 million in funding primarily due to increased ongoing labor costs of $0.7 million, including approved (MOU) salary and benefit increases of $0.5 million and $0.2 million due to: the proposed addition of 0.25 FTE, FTE allocation shifts to the General Fund from grant (1.0 FTE) and Measure O funds (0.5 FTE per approved MO weaning schedule), a total of $0.3 million necessary to maintain temporary labor hours due to required minimum wage increases and funding of youth development and Oxnard Arts Academy programs, as well as $0.5 million in increased Internal Service Funds costs, mainly from rising liability insurance costs.

Community Development proposes an increase of $1.0 million, mainly due to increased ongoing labor costs of $0.7 million, including $0.5 million approved (MOU) salary and benefit increases and $0.2 million due to FTE allocation shifts to the General Fund from Measure O (2.0 FTE per approved MO weaning schedule), $0.03 millionin code compliance overtime necessary for after-hours activity to support Hazard Elimination & Reduction Operations (HERO), as well as $0.3 million in increased Internal Service Fund costs, mainly from rising liability insurance costs.

The total increase from all other departments not specified above is a combined net increase of $1.5 million. This

includes a decrease in non-departmental of $1.0 million (primarily due to less capital project funding), increases of: $0.2 million in City Clerk, $0.6 million in City Manager's Office, $0.4 million in City Attorney's office, $0.8 million in Finance (including $0.6 million for the addition of 4.92 FTE), $0.1 million increase in Human Resources, $0.3 million increase in the Housing Department, and $0.1 million increase in the City Treasurer's department. Most of the increases are driven primarily by ongoing increases from approved (MOU) salary and benefit increases, increases in Internal Service Fund costs, and increases in transfers to other funds (non-departmental).

The Proposed Budget for the FY 2026-27 CIP component is $9.6 million, including $1.0 million for the ongoing implementation of the ERP project, as well as $4.4 million for Arterial Street Resurfacing and $4.2 million for Neighborhood Street Resurfacing , that will be paid on pay-go or cash-fund basis. As stated in previous budgets, and is reflected in the Proposed Budget, the City cannot continue to fund CIP projects with cash at these levels, especially with Measure O ending March 31, 2029.

The General Fund's current debt service is budgeted at $4.2 million and represents approximately 1.7 % of the General Fund proposed operating expenses. This is below the 10% limit established by the City's Debt Management Policy.

Included in the Proposed Budget is $11.0 million of anticipated net personnel savings resulting from unfilled positions in the General Fund. The vacancy savings are based on recent trends experienced by the City. The Proposed Budget for FY 2026-27 assumes a vacancy rate of 8.1% in dollar terms, a reduction from prior year 8.4%, consistent with the vacancy levels projected in FY 2025-26 and with current vacancy levels as of April 2026.

Fund Balance

The Fiscal Year 2024-25 ACFR will provide updated General Fund fund balance information. The latest estimates include operating reserves at the 16.6% policy target, $14.9 million in Economic Protection reserves, and $11.6 million in one-time available funds as of June 30, 2025.

Staff projects for FY 2025-26 an increase in operating reserves to maintain the 16.6% funding, $14.9 million in Economic Protection Reserves, estimating one-time available fund balance of $12.7 million at the end of FY 2025-26.

Given economic uncertainty, the City Manager recommends appropriating a portion of the available fund balance for one-time projects, and maintaining the Economic Protection Reserves in abeyance and evaluating economic conditions at mid-year.

For additional detail, refer to the General Fund tables in Attachment 8.

Measure O Fund (104)

Revenues

FY 2026-27 revenue from the Measure O half-cent sales (transactions and use) tax is proposed at $20.2 million, a $0.3 million (2%) increase over the FY 2025-26 budget. Similar to Measure E sales taxes mentioned in the General Fund narrative, local sales tax receipts are projected to experience modest growth. This is reflected in a $0.3 million increase (2%) in FY 2026-27 to $19.5 million proposed. Interest income is projected to be flat compared to the FY 2025-26 Adopted Budget, at $0.7 million.

Expenditures

As mentioned earlier in the report, long-term planning must incorporate that the Measure O half-cent sales tax will terminate on March 31, 2029. Council adopted a Measure O Weaning Schedule on June 7, 2022, updated on April 25, 2024 to ensure the City is slowly and methodically moving Measure O funded ongoing programs to an

alternative funding source such as the General Fund. As previously adopted by Council, staff is weaning $1.0 million from Measure O to the General Fund in FY2026-27. Of this, $0.4 million relates to Safe Homes Safe Family $0.2 million for PAL Operational funding, with the remaining $0.4 million reflecting the East Village Operational maintenance, College Park and Fire Advanced Life Support programs.

The FY 2026-27 Measure O Proposed Budget total expenses are $19.5 million and includes a $10.5 million transfer to the Capital Outlay Fund to pay for projects. $8.2 million is identified in the CIP page in the City's Proposed Budget. The list includes funding for Neighborhood Street Resurfacing $3.9 million and Citywide Alleyway Resurfacing/Reconstruction $4.3 million. Recommended one-time Public Safety-related funding includes $2.3 million for the purchase of a Fire Ladder Truck to replace an aerial T68 ladder truck that has been in service for 12 years, and a total of $3.5 million to fund a Fire Academy, including program costs and funding for 21 limited term cadets. The City is also continuing to support the Rent Stabilization - Housing program and various ongoing Recreation-related programs.

Fund Balance

Measure O Fund one-time available fund balance was $12.8 million as of June 30, 2025, and it is projected to be $3.6 million at the end of FY 2025-26. The projected ending fund balance as of June 30, 2026, along with the Weaning Schedule, is adequate to support paying down debt in future years and supporting one-time projects until Measure O sunsets in FY 2028-29.

For additional detail, refer to the Measure O tables in Attachment 8.

Enterprise Funds

The Water, Wastewater, Environmental Resources and Golf Funds section of this staff report excludes the capital funds transfer in and expenditure transactions necessary to move money between funds within the same division as they can have the effect of doubling up the expenditures (duplicate expenditure amounts in the transfer out funding source as well as capital fund expenditure) related to CIP transfers. All numbers quoted for total revenue and expenses net these transactions. Additionally, the Budget Forecast section of the annual budget publication shows a five-year forecast for each enterprise fund.

Water Funds (601-609)

Revenues

FY 2026-27 Water Fund revenues are projected to be $76.5 million, an increase of $2.9 million (4%) compared to FY 2025-26 Adopted Budget of $73.6 million. Water Sales, of which approximately 94% result from utility fees paid by users, are projected to total $72.1 million, a $3.7 million (5.5%) increase when compared to the FY 2025-26 Adopted Budget. FY 2026-27 marks the third year of the adopted rate study that drives the revenue change with respect to the prior fiscal year. Water consumption is projected at similar levels as in Fiscal Year 2025-26.

Expenditures

FY 2026-27 Water Fund expenditures are proposed at $78.1 million, which is $2.9 million (3.9%) higher than the Adopted Budget for FY 2025-26 of $75.2 million. Of the proposed Fiscal Year 2026-27 budget, $2.3 million is appropriated for capital projects identified within the Capital Improvement Plan (CIP)

Fund Balance

The combined Water Funds had a total spendable fund balance of $19.2 million, which was $1.2 million above the reserve target amount of $18.0 million at June 30, 2025. A deficit of $2.8 million is projected for FY 2025-26, with the projected available fund balance as of June 30, 2026, at $16.4 million.

The proposed FY 2026-27 budget revenues of $76.5 million and expenditures of $78.1 million result in a use of available fund balance of $1.6 million in the year. The predicted FY 2026-27 ending available fund balance at June 30, 2027, is $4.2 million below the City Council reserve policy target of 25% for utility funds. This results in a projected ending fund balance of $14.8 million.

For additional detail, refer to the Water Fund tables in Attachment 8 .

Wastewater Funds (611-617 & 628)

Revenues

FY 2026-27 Wastewater Fund revenues are projected to total $46.7 million, excluding SRF loan proceeds. Compared to the FY 2025-26 Adopted Budget of $45.0 million, operating revenues increased by $1.7 million (3.8%). Utility fees are projected at $43.8 million, a $2.1 million (5.2%) increase over FY 2025-26. Interest Income is proposed to be $2.5 million, a decrease of $0.4 million (15.2%) compared to FY 2025-26, based on projected cash balances and interest rates for FY 2026-27.

The City has secured $88.6 million in a State Revolving Fund (SRF) Loan at 0.9% interest rate to support capital projects. Debt service payments are expected to commence starting in FY 2028-29.

Expenditures

FY 2026-27 Wastewater Fund expenditures are proposed at $49.3 million, which is $38.2 million (43.6%) less than the Adopted Budget for FY 2025-26 of $87.5 million, which is primarily driven by SRF-funded CIP projects, with actual operating expenses actually down $0.6 million from FY 2025-26. Of the proposed Fiscal Year 2026-27 budget, $6.4 million is appropriated for capital projects identified within the CIP.

Fund Balance

The combined Wastewater Funds had a total spendable fund balance of $54.5 million, which is $43.6 million above the reserve target amount of $10.9 million at June 30, 2025. A use of fund balance of $41.3 million is projected in FY 2025-26, reflecting the SRF loan proceeds, resulting in a projected available fund balance of $13.3 million at June 30, 2026.

The Proposed FY 2026-27 budget revenues of $46.7 million, $14.8 million in SRF loan proceeds, and expenditures of $49.3 million result in a net positive activity of $12.3 million in the year. The predicted FY 2026-27 ending fund balance as at June 30, 2027, is $25.5 million, which is $14.8 million above the Council reserve policy target of 25% for utility funds.

For additional detail, refer to the Wastewater Fund tables in Attachment 8 .

Environmental Resources Funds (631-638)

Revenues

FY 2026-27 Environmental Resources Fund revenues are projected to total $71.2 million, an increase of $2.5 million (3.7%) compared to the FY 2025-26 Adopted Budget of $68.7 million. A majority of all revenue is derived from ratepayer utility fees in line with Council-approved rates, which are projected for FY 2026-27 at $70.5 million, a $2.7 million (4%) increase over FY 2025-26 of $67.8 million. Interest income is proposed at $0.5 million, a decrease of $0.2 million (26%) from the prior fiscal year.

Expenditures

FY 2026-27 Environmental Resources Fund expenditures are proposed at $73.4 million, a $3.7 million (5%) increase

compared to the FY 2025-26 Adopted Budget of $69.7 million. Solid waste disposal fees at Simi Landfill increased by 65% ($58.06 per ton) from the prior year, impacting the budget by $10.6 million.

Fund Balance

The combined Environmental Resources Funds had a total fund balance of $13.9 million, which is $2.2 million below the Council policy reserve target amount of $16.1 million (25% of operating expenses) as of June 30, 2025. For FY 2025-26, projected expenses are $0.3 million more than projected revenues, leaving the spendable fund balance at $13.6 million, which is $2.5 million below the reserve target.

The Proposed FY 2026-27 Budget revenues of $71.2 million and expenditures of $73.4 million result in a use of $2.2 million of fund balance in the year. The predicted FY 2026-27 ending fund balance of $11.4 million will be $6.5 million below the 25% reserve policy. Going below, and staying below, the 25% reserve policy is consistent with the Council-approved Environmental Resources Cost of Service Study.

For additional detail, refer to the Environmental Resources Fund tables in Attachment 8 .

Golf Funds

Revenues

FY 2026-27 Golf Fund revenues are projected to total $7.2 million, an increase of $0.2 million (3.5%) compared to the FY 2025-26 Adopted Budget of approximately $7 million. Revenues are primarily generated from golf course fees, along with food and beverage operations, and merchandise sales.

Expenditures

FY 2026-27 Golf Fund expenditures are proposed at $6.6 million, an increase of $0.1 million (1.6%) compared to the FY 2025-26 Adopted Budget of $6.5 million. Expenditures comprise the golf course operational costs—outlined in the City-approved Annual Plan provided by the operator—as well as city costs.

Fund Balance

The combined Golf Funds had a total spendable fund balance of $5.1 million, which includes a one-time available fund balance of $3.8 million above the reserve target amount of $1.3 million as of June 30, 2025. A decrease in fund balance of $2.3 million is projected for FY 2025-26, resulting in a projected ending fund balance of $2.8 million as of June 30, 2026.

The Proposed FY 2026-27 budget revenues of $7.2 million and expenditures of $6.6 million result in an increase of fund balance of approximately $0.7 million in the year. The estimated ending available fund balance is $3.4 million, which is $1.8 million above the operating reserve target amount of $1.6 million (25.0% of expenses).

For additional detail, refer to the Golf Fund tables in Attachment 8

STRATEGIC PRIORITIES

This agenda item supports the Organizational Effectiveness strategy. The purpose of the Organizational Effectiveness strategy is to reinforce, stabilize, improve, and strengthen the organizational foundation of the City in order to build a modern, high-functioning City government that effectively and efficiently supports the operating departments in providing high-quality services and programs for our residents and businesses.

FINANCIAL IMPACT

The financial impact of each recommended action is described in the applicable discussion section. The digital version of our Proposed Budget public hearing publication is available on the City's website at: https://www.oxnard.gov/finance/budget/fiscal-year-2026-2027-budget

COMMITTEE OUTCOME

This item did not originate in Committee.

CITY COUNCIL OF THE CITY OF OXNARD

RESOLUTION NO._____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD APPROVING THE CITY OPERATING AND CAPITAL IMPROVEMENT BUDGET FOR THE FISCAL YEAR 2026-2027

WHEREAS, the City Manager submitted for the consideration of the City Council a proposed City Operating and Capital Budget for fiscal year 2026-2027; and

WHEREAS, in accordance with City Code, Section 2-179, a public hearing on these budgets was duly scheduled, advertised and held, and there was an opportunity for all persons to be heard and for their suggestions or objections to be carefully considered.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF OXNARD HEREBY RESOLVES AS FOLLOWS:

1. The City Council has reviewed the proposed Operating and Capital Improvement Budget and the funds included therein for the period of July 1, 2026 through June 30, 2027 and hereby finds that such budgets, as revised, are sound plans for the financing during fiscal year 2026-2027 of required City operations, services, and capital improvements. Such budgets are hereby adopted as follows:

2. To the extent funds are available, any unused appropriations at the end of fiscal year 2025-2026 in active capital improvement projects and multi-year programs are hereby re-appropriated for continued use in fiscal year 2026-2027.

3. The Council authorizes the City Manager to transfer and make adjustment of interfund transfers at the close of fiscal year 2025-2026, to eliminate cash deficits in funds within the same fund group as authorized in section 10 per Financial Policy – Section I.D 3. And 4., when necessary, including: Utility Enterprise Funds, Capital Growth Funds, Impact Fee Funds, Assessment District Funds, Grant Funds, Debt Service Funds, and all other funds that may need such adjustments.

4. Any remaining balances in approved grant programs, capital improvement, developer deposit and trust fund projects at the end of fiscal year 2025-2026, except for balances reallocated as part of the budget process, are hereby re-appropriated for continuing use in fiscal year 2026-2027 and all estimated revenues from such approved grants, capital improvement, developer deposit and trust fund projects for fiscal year 2025-2026 that are not realized by year end are authorized to be continued.

5. To the extent funds are available, General Fund encumbrances whereby contracts remained active at the close of fiscal year 2025-2026 are carried forward and any corresponding remaining balance of special one-time authorized appropriations are also carried forward with the approval of the City Manager and Chief Financial Officer.

6. To the extent funds are available and requested by the operating department, any unused capital expenditure appropriation in the operating budget may be carried forward with the approval of the City Manager and Chief Financial Officer.

7. All General Fund revenues in excess of expenditures and encumbrances at the close of fiscal year 2025-2026, not otherwise provided for in City Council budget policies or re-appropriated above, are hereby appropriated to the General Fund Operating Reserve on June 30, 2026. Current projections, however, do not anticipate any such excess.

8. Staff is directed to correct any clerical errors in the proposed budget document.

9. Staff is directed to ensure that the final adopted budget documents containing the Operating Budget and the Capital Improvement Budget for fiscal year 2026-2027 shall contain all revisions made by the City Council prior to final budget adoption.

10. The City Manager or designee is authorized to approve any appropriation transfers between departments within a fund or subfund. Any department director is authorized to transfer appropriations between programs, within the same fund or subfund, as long as funding is available in the department as a whole (see Financial Policy-Section I.D 3. and 4.)

11. Adoption of this resolution provides Council the authority to expend any and all funds appropriated for purposes as determined in the budget.

CITY COUNCIL OF THE CITY OF OXNARD

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD ESTABLISHING FINANCIAL MANAGEMENT POLICIES

WHEREAS, the City Council wishes to establish financial management policies to be followed in the development and implementation of the City budget.

NOW, THEREFORE, the City Council of the City of Oxnard hereby resolves that the following policies will guide the development and implementation of the City's Operating and Capital Improvement Project Budgets.

I. BUDGET POLICIES

A. Budget Guidelines

1. The City Manager will prepare a multi-year revenue and expenditure forecast, which will provide parameters for the budget development process.

2. The budget process will include the development of a balanced two-year budget when financial circumstances are appropriate for a two-year budget. Any two-year budget will include an approach that City Council approves appropriations for a one-year operating budget and capital improvement plan.

3. The budget will be organized in a department/service level format.

4. The budget development process will include the identification and evaluation of policy options for service levels. However, the adopted budget will include only those policy options approved by the City Council.

B. Appropriation Priorities

1. In evaluating the level of appropriations for department enhancements, or expense reductions, staff will apply the following principles in the priority order given:

   a. Essential services that provide for the health, safety and welfare of residents.

   b. Contractual obligations to bondholders and other debts.

   c. Adequate ongoing maintenance of facilities and equipment.

   d. All other services.

2. When reductions in personnel are necessary to reduce expenditures, to the greatest extent possible this will be accomplished through normal attrition.

C. Supplemental Services

The City Council may budget for certain services that may also be provided by other governmental agencies or the private sector. The provision of these services will be based on a demonstrated community need or benefit over time. When appropriate, these services will be supported in whole or in part by user fees.

D. Appropriation Changes

1. Changes to the City Council adopted budget for the fiscal year shall occur as follows:

2. By City Council action for all changes that either increase or decrease fund or subfund appropriations adopted in the annual budget appropriation resolution.

3. By the City Manager for appropriation transfers between departments within a fund or subfund.

4. By the City Manager for deductive grant revisions where appropriated grant funding becomes unavailable.

5. By the Department Director for appropriation transfers between programs and between projects within the same fund or subfund, as long as funding is available in the department as a whole.

II. CAPITAL IMPROVEMENT PROGRAM POLICIES

A. Capital Planning Period

1. Staff will budget all capital improvements in accordance with an adopted Capital Improvement Program (CIP).

2. The City's long-range capital planning period will be a minimum of five years, or longer where appropriate.

3. The Five-Year Capital Improvement Program will be reviewed and approved by City Council on a two-year cycle, or more frequently, as needed based on economic and funding outlooks. Individual projects will be postponed or canceled if their funding fails to materialize. Conversely, individual projects may be moved up on the timeline if their funding materializes sooner than anticipated. City Council will review and approve appropriations at least annually, and also as necessary during the year if funding and timelines change. Appropriation changes will be in accordance with Section I.D.

4. The CIP will be in conformance with and support the City's major planning documents: the most current General Plan, project specific plans, and citywide master plans for related infrastructure improvements.

5. Public Works staff will prepare strategic plans and master plans for major infrastructure and utility improvements with a 10- or 20-year planning horizon when appropriate.

6. For CIP projects paid for by the General Fund, the Finance Department will transfer Council-approved appropriations from the General Fund to the capital project fund from which the capital expenditures are to be made. Most often, this will be Fund 301 Capital Outlay. Such transfers will be made only as actual expenditures occur, not on a fixed regular schedule. Any transfer authorized but not yet made at the end of the fiscal year will be carried-forward into the next fiscal year(s) until project has been completed.

7. To the extent funds are available, any unused appropriations at the end of the fiscal year in active CIP projects will be carried-forward into the next fiscal year(s) until the project has been completed.

8. During the life of a CIP project, any funding source that is replaced by an alternate funding source may be unappropriated from the project upon approval of the City Manager.

9. Any unused funds after the completion of the project, will be returned to the funding source. This should happen within 90-days of notification to the Finance department.

B. Capital Project Priorities

1. Public Works staff will evaluate and prioritize each proposed capital project against the following criteria:

   a. Health and Safety: Projects needed to maintain or improve human health or safety.

   b. Asset Preservation: Projects needed to maintain or protect the City's existing assets.

   c. New or Expanded Services: Projects that create something new, like a new park, or increase the capacity of existing facilities, like larger water or sewer lines.

C. Capital Project Management by the Public Works Department

1. Capital projects will be managed in a phased approach as needed. The project phases will become a framework for appropriate decision points and reporting. The phasing will consist of:

   a. Conceptual/schematic proposal
   b. Preliminary design and cost estimate
   c. Engineering and final design
   d. Bid administration
   e. Acquisition/construction

f. Project closeout

2. Each capital improvement project will have a project manager who will prepare the project proposal, ensure that required phases are completed on schedule, authorize payment of expenditures as required by the City's Purchasing Manual, ensure that all regulations and laws are observed, periodically report project status, track project expenditures and perform the project closeout according to current procedures.

III. REVENUE POLICIES

A. Maintenance of Revenues

1. The City Council will attempt to maintain a diversified and stable revenue base to shelter the City from short term fluctuations in any one revenue source.

2. The City Council will promote an increase in the City's revenue base through economic development programs that maintain and enhance a vigorous local economy.

3. The City Council will seek to supplement the City's revenue base through the identification of and application for State and federal grant funds, which will support identified needs.

B. User Fees and Rates

1. The City Council will attempt to recover the costs of services providing a private benefit to users through the imposition of user fees and charges.

2. The City Council will establish all user fees and charges at a level related to the direct and indirect costs of providing services and the degree of public versus private benefit.

3. Staff will recalculate periodically the full costs of activities supported by user fees and rates to identify the impact of inflation and other cost increases.

4. The City Council will set fees and user rates for each enterprise fund (water, wastewater, environmental resources) at a level that fully supports the total direct and indirect costs of the activity.

C. Revenue Collection

1. Staff will take all cost effective actions available to collect revenues.

2. Staff will grant user fee waivers and debt forgiveness only as authorized by City Council approved policies.

3. Staff will not grant development and permit fee waivers.

D. Interest Earnings

1. Staff will assign interest earnings to the appropriate funds, where required, based on invested cash balances.

2. Investment policies will be reviewed annually by the Finance and Governance Committee.

IV. FUND BALANCE POLICY

This Fund Balance Policy establishes the procedures for reporting unrestricted fund balance in the General Fund financial statements. Certain commitments and assignments of fund balance will help ensure that there will be adequate financial resources to protect the City against unforeseen circumstances, economic downturns and events such as revenue shortfalls and unanticipated expenditures. The policy also authorizes and directs the Chief Financial Officer to prepare financial reports which categorize fund balance in accordance with Governmental Accounting Standards Board (GASB) Statement No. 54, Fund Balance Reporting and Governmental Fund Type Definitions.

A. Procedures

Fund balance is essentially the difference between the assets and liabilities reported in a governmental fund. There are five separate components of fund balance, each of which identifies the extent to which the City is bound to honor constraints on the specific purposes for which amounts can be spent.

- Non-spendable
- Restricted
- Committed
- Assigned
- Unassigned

The first two components listed above are not addressed in this policy due to the nature of their restrictions. An example of non-spendable fund balance is a prepaid item. Restricted fund balance is either imposed by law or constrained by grantors, contributors, or laws or regulations of other governments. This policy is focused on financial reporting of unrestricted fund balance, or the last three components listed above. These three components are further defined below.

B. Committed Fund Balance

The City Council, as the City's highest level of decision-making authority, may commit fund balance for specific purposes pursuant to constraints imposed by formal actions taken, such as ordinance or resolution. These committed amounts cannot be used for any other purposes unless the City Council removes or changes the specified use by taking the same type of action it

employed to commit those amounts. City Council action to commit fund balance should occur within the fiscal reporting period; however the amount can be determined in the subsequent period.

C. Assigned Fund Balance

1. Amounts that are constrained by the City's intent to be used for specific purposes, but are neither restricted nor committed, should be reported as assigned fund balance.

2. This policy hereby designates the authority to assign amounts to be used for specific purposes to the Chief Financial Officer for the purpose of reporting these amounts in the annual financial statements.

D. Unassigned Fund Balance

These are residual positive net resources of the general fund in excess of what can be properly classified in one of the other four categories.

V. RESERVE POLICIES

A. Adequate reserves will be maintained for all known liabilities, including payable employee leave balances, workers' compensation, and self-insured retention limits.

B. The City Council will endeavor to maintain an operating reserve equal to a minimum 16.6% of the General Fund adopted budget for operating expenses. The operating reserve shall be available to: cover cash flow requirements; meet unanticipated revenue shortfalls; take advantage of unexpected opportunities; invest in projects with a rapid payback; ensure against physical or natural disasters; and provide interest earnings.

C. The City Council will endeavor to maintain operating reserves in the utility funds equal to 25 percent (25%) of the adopted budget for operating expenses.

VI. INTERFUND BORROWING POLICIES

A. Interfund borrowing requires City Council approval.

B. Such loans will carry a market rate of interest.

C. Such loans may, at City Council's discretion, include interest-only payments by the borrowing fund for the first year or two.

D. Once principal repayments begin, amortization schedules will be for level or decreasing annual debt service, not for increasing annual debt service.

E. The borrowing fund may prepay all or a portion of the principal and interest at any time, without penalty.

F. The lending fund may call all or part of the loan immediately at the lending fund's discretion, also without penalty.

VII. DEBT POLICIES

A. Use of Debt

1. Any use of tax and revenue anticipation borrowing will be consistent with State and federal laws and regulations.

B. Conditions of Use

1. The City Council will use long term debt to finance a land purchase, major equipment acquisition, a capital project, or reserve only if a cost/benefit analysis establishes that the financial and community benefits of the financing exceed the costs.

2. Benefits can include, but are not limited to, the following:

   a. Present value benefit: The current cost plus the financing cost is less than the future cost of the project or acquisition.

   b. Maintenance value benefit: The financing cost is less than the maintenance cost of deferring the project or acquisition.

   c. Equity benefit: Financing provides a method of spreading the cost of a project or acquisition back to the users of the project or acquisition over time.

   d. Community benefit: Debt financing of the project or acquisition enables the City Council to meet an immediate community need.

3. Debt financing will be used only when project revenues or other identified revenue sources are sufficient to service the term of the debt.

4. The City Council by resolution will periodically establish industry standard bond debt ratios to assess maximum debt carrying capacity and will apply these ratios to each proposed debt.

5. When the City obtains debt financing on behalf of or benefiting a third party (as with assessment districts) such debt will be issued in conformance with existing City Council priorities and policies without contingent liability of the City and with all costs of issuance and administration fully reimbursed by the third party.

C. Methods

1. Staff will retain the following contract advisors for the issuance of debt:

a. Bond Counsel - To be selected by RFP periodically.

b. Disclosure Counsel – To be selected by RFP periodically.

c. Special Counsel - To be selected by RFP periodically to protect the City's interest in complex negotiations and document review.

d. Municipal Advisor - To be selected by RFP periodically to assist the City in assessing financing opportunities and options, selection of underwriters, preparation of all required financing documents, and other financial advisory assistance as required.

e. Underwriters - To be selected periodically by RFP for negotiated financings. For bond issues that are competitively bid, underwriter will be selected on the basis of lowest true interest cost (TIC).

2. The City Council's preference is to issue fixed rate, long-term debt with level debt service, but variable rate debt or other debt service structure may be considered if an economic advantage is identified for a particular project.

3. Bond proceeds will be held by an independent bank acting as trustee or fiscal agent.

4. The City Council's bond rating objective for the City for all debt issues is a Standard & Poor's rating of AA. Credit enhancements will be used to achieve higher ratings when there is an economic benefit.

VIII. ACCOUNTING POLICIES

A. Accounting Standards

1. The City's accounting systems and procedures will comply with Generally Accepted Accounting Principles (GAAP) and the Governmental Accounting Standards Board (GASB) to the extent necessary to achieve an unmodified audit opinion and adequate internal controls.

2. The City has adopted the historical cost method of fixed asset reporting to comply with GASB. The capitalization policy is $5,000 or more for equipment, $20,000 for buildings and improvements other than buildings, and $100,000 for infrastructure.

3. Staff will prepare quarterly and annual financial reports to present a summary of financial performance and position for major operating funds.

4. Staff will provide full disclosure in the annual financial statements and bond representations.

B. Independent Auditor

1. The City will retain an independent certified auditing firm to annually conduct an audit of the financial records in accordance with all state and federal requirements.

2. The selection of the City's audit firm will be by an RFP submitted to a limited number of qualified audit firms with recognized credentials in municipal auditing.

3. In order to promote continuity in the audit process, the engagement of the audit firm will be for a minimum period of three years. Such three-year engagement may be extended on an annual basis at the option of the City Manager.

IX. RISK MANAGEMENT POLICIES

A. The City will maintain a risk management program for public liability, workers' compensation, and loss of property exposures. This program will emphasize the prevention and avoidance of risk, whenever possible, funding for losses which cannot be avoided, and transfer of risk to third parties whenever appropriate.

B. The risk management process will include the systematic and continuous identification of loss perils and exposures, the analysis of these perils and exposures in terms of frequency and severity probabilities, the application of sound risk control procedures and the financing of risk consistent with the City's financial resources.

C. If the loss potential in dollars for a particular risk is substantial and cannot be absorbed within the City's annual operating budget, the staff will develop and maintain a program of purchased insurance, funded self-insurance, or debt.

D. Staff will endeavor to promptly settle justified claims but will vigorously defend claims which are doubtful, frivolous, or unsupported.

E. Staff will maintain separate self-insurance funds to identify and segregate the financial resources necessary to cover insurance premiums and self-insured retentions.

1. Revenues into the insurance funds will be generated by charges to operating programs allocated to reflect loss experience.

2. Resources will be established at the end of each year to fund liability for open claims, incurred but not reported claims, and a catastrophic loss reserve as periodically recommended by an independent actuarial consultant, or as authorized for GAAP.

3. The Confidence Interval for all risk management reserve funds will be maintained at a minimum of 50% confidence interval.

F. To assist in the overall administration of the risk management program, the City Council will utilize the following consultants:

1. Claims adjuster for workers' compensation and public liability/property damage.

2. Claims auditor, actuarial consultant, and risk management program auditor.

3. Insurance broker of record.

X. DEVELOPER DEPOSIT POLICIES

A. The City collects developer deposits often identified in a development agreement (DA) and/or ownership participation agreement (OPA), along with developer deposits and deposit based fees associated with Building and Planning permits. The developer deposits and deposit based fees are used by the City for costs associated with project review and conceptual planning, City staff time, and other third party services required for the project, including, but not limited to, contract planning, engineering, architectural, onsite posting, legal advertising, and attorney review. As charges pertaining to the project accrue, the Department shall keep records of actual staff time and costs of consultant and other third party service providers used.

B. To the extent the City receives deposits from developers as advanced payments to cover staff time and third-party expenses required to issue permits, and these deposits were not accounted for in the Adopted Budget, the Council authorizes the City Manager to administratively appropriate funds to the relevant tracking project and expenditure accounts within the Developer & Other Deposits Fund [Fund 541] up to the amount of the deposits received.

XI. CONTRIBUTION TRUST FUND

A. The contribution trust fund is used to receive and hold donations and other monies on the balance sheet until such time that they are used for their intended purposes or returned to the originators. An appropriation is required for the City to expend these funds on eligible items as determined by the donor or fee type. Items held in the fund include business license fees for development, private donations, Arctic Cold Fire donations, library fundraising monies, Multicultural Festival funds, witness fees, and donations for youth programs.

B. The Council authorizes the City Manager to administratively appropriate funds to the relevant tracking project and expenditure accounts within the Contribution Trust Fund [Fund 571] up to the amount of the donation / fee received.

CITY COUNCIL OF THE CITY OF OXNARD
RESOLUTION NO._____
A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD ESTABLISHING AN APPROPRIATION LIMIT FOR THE FISCAL YEAR 2026-2027

WHEREAS, Government Code section 7900 provides for the implementation of Article XIIIB of the California Constitution; and

WHEREAS, Government Code sections 7901 through 7914 provide that each year the City Council shall, by resolution, establish its proceeds of taxes appropriation limit at a regularly scheduled meeting; and

WHEREAS, all documentation used in the determination of the proceeds of taxes appropriation limit has been and will continue to be available to the public from the Chief Financial Officer of the City of Oxnard as required by law; and

WHEREAS, the proceeds of taxes appropriation limit for the fiscal year 2026-2027 is calculated by adjusting the prior fiscal year, 2025-2026; and

WHEREAS, the adjustment factors are:

1. change in the population of the County = -0.68%
2. change in the population of the City =- 0.38%
3. change in the per capita income in California = 4.95%; and

WHEREAS, the formula provides that the City can use the greater of either factors 1 or 2, plus factor 3; and

WHEREAS, the City's fiscal year 2026-2027 appropriation limit for proceeds of taxes is determined to be $505,786,738 using factors 2 and 3.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF OXNARD resolves as follows: The proceeds of taxes appropriation limit for the fiscal year 2026-2027 is established as $505,786,738 and the "proceeds of taxes" revenue subject to this limitation is $249,116,308, an amount well below the established limit. Documentation used in the determination of the proceeds of taxes appropriation limit is available to the public at the City of Oxnard Finance Department, 300 West Third Street, Oxnard, CA 93030.

CITY COUNCIL OF THE CITY OF OXNARD

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD ADOPTING AN UPDATED MASTER FEE SCHEDULE FOR FISCAL YEAR 2026/2027

WHEREAS, the City Council has previously adopted Resolutions ordering the consolidation of all of the fees adopted by the City Council into one Master Fee Schedule; and

WHEREAS, the purpose of the Master Fee Schedule is to assist the public, as well as City staff in readily locating City fees; and

WHEREAS, the Master Fee Schedule is updated annually and adopted by Resolution prior to the beginning of each fiscal year; and

WHEREAS, the adoption of this Master Fee Schedule is consistent with the City Council's Revenue Policies adopted annually in its Financial Management Policies Resolution; and

WHEREAS, this updated Master Fee Schedule Resolution supersedes the former master fee schedule Resolution 15,889 adopted on June 17, 2025; and

WHEREAS, the adoption of this Master Fee Schedule will not supersede or modify any fees previously adopted by ordinance or resolution; rather, it is a schedule that reflects the current fee amounts for the upcoming fiscal year.

NOW, THEREFORE, the City Council of the City of Oxnard resolves as follows:

SECTION 1. The foregoing recitals are true and correct and are incorporated herein by this reference as though fully set forth.

SECTION 2. The Master Fee Schedule, attached as **Exhibit A** and incorporated herein by this reference, is hereby adopted by the City Council.

SECTION 3. The City Manager or designee may modify the Master Fee Schedule to add new, updated or previously adopted fees not currently included in the Master Fee Schedule, as necessary.

SECTION 4. If any provision of this Resolution or the application of any such provision is held invalid, such invalidity shall not affect the other provisions or applications of this Resolution that can be given effect without the invalid provision or application, and to this end the provision of this Resolution are severable and that the City Council declares that it would have adopted this Resolution irrespective of the invalidity of any particular portion of this Resolution.

SECTION 5. This Resolution shall be effective immediately upon adoption.

SECTION 6: The City Clerk shall certify to the adoption of this Resolution, and shall maintain on file as a public record this Resolution.

II B 5b	COMMUNITY DEVELOPMENT	5B. $___ FOR EACH ADDITIONAL 10,000 CUBIC YARDS OR FRACTION THEREOF	EACH	15164	7/24/2018	$86.35
III	COMMUNITY DEVELOPMENT	**ENCROACHMENT PERMIT FEES**				
III A	COMMUNITY DEVELOPMENT	GENERAL SINGLE ENCROACHMENT AND SITE IMPROVEMENT PERMIT	EACH	15164	7/24/2018	$125.00
III B 1	COMMUNITY DEVELOPMENT	ANNUAL MULTIPLE ENCROACHMENT PERMIT	EACH	15164	7/24/2018	$580.00
III B 1a	COMMUNITY DEVELOPMENT	1A. EACH EXCAVATION UNDER MULTIPLE PERMIT	EACH	15164	7/24/2018	$55.00
III B 1b	COMMUNITY DEVELOPMENT	1B. EACH POLE INSTALLATION, REMOVAL OR RELOCATION	EACH	15164	7/24/2018	$55.00
IV	**COMMUNITY DEVELOPMENT**	**MINOR ENCROACHMENT OR MINOR SITE IMPROVEMENT INSPECTION FEES**				
IV A	COMMUNITY DEVELOPMENT	1. ACCESSIBLE CURB RAMP (EACH)	EACH	15164	7/24/2018	$390.00
IV B	COMMUNITY DEVELOPMENT	2. CONSTRUCTION MATERIAL IN RIGHT-OF-WAY (EACH 5 DAYS OR PORTION THEREOF)	EACH	15164	7/24/2018	$155.00
IV C	COMMUNITY DEVELOPMENT	3. CONSTRUCTION OF COMMERCIAL DRIVEWAY (EACH OPENING)	EACH	15164	7/24/2018	$860.00
IV D	COMMUNITY DEVELOPMENT	4. CONSTRUCTION OF RESIDENTIAL DRIVEWAY (EACH OPENING)	EACH	15164	7/24/2018	$315.00
IV E	COMMUNITY DEVELOPMENT	5. DOCK PILINGS (FIRST PILE)	EACH	15164	7/24/2018	$235.00
IV F	COMMUNITY DEVELOPMENT	6. DOCK PILINGS (EACH ADDITIONAL PILE)	EACH	15164	7/24/2018	$155.00
IV G	COMMUNITY DEVELOPMENT	7. EXCAVATIONS-EACH LOCATION (100 SQUARE FEET OR LESS OF EXCAVATED SURFACE AREA EARTHWORK ONLY)	EACH	15164	7/24/2018	$235.00
IV H	COMMUNITY DEVELOPMENT	8. EXCAVATIONS-ADDITIONAL (TRENCHING OVER 100 SQUARE FEE/PER SQUARE FOOT)	PER SQUARE FOOT	15164	7/24/2018	$1.17
IV I	COMMUNITY DEVELOPMENT	9. FIRE FLOW TEST (EACH) CONSTRUCTION INSPECTION PERSONNEL	EACH	15164	7/24/2018	$92.95
IV J	COMMUNITY DEVELOPMENT	10. FIRE FLOW TEST (EACH) WATER PERSONNEL (ORD. 2859]	EACH	15164	7/24/2018	$150.00
IV K	COMMUNITY DEVELOPMENT	11. FIRE FLOW TEST (EACH) WATER USAGE (ORD. 2859, BASED ON $4.30 PER HCF CONSTRUTION WATER USAGE, ADDITIONAL SAME LOCATION)	EACH	15164	7/24/2018	$100.00
IV L	COMMUNITY DEVELOPMENT	12. FIRE FLOW TEST (EACH) CONSTRUCTION INSPECTOR	EACH	15164	7/24/2018	$155.00
IV M	COMMUNITY DEVELOPMENT	13. FIRE FLOW TEST, ADDITIONAL (SAME LOCATION, EACH)	EACH	15164	7/24/2018	$80.00
IV N	COMMUNITY DEVELOPMENT	14. FIRE HYDRANT INSTALLATION (NO HOT TAP)	EACH	15164	7/24/2018	$470.00
IV O	COMMUNITY DEVELOPMENT	15. FIRE LINE BACK FLOW (NO HOT TAP)	EACH	15164	7/24/2018	$550.00
IV P	COMMUNITY DEVELOPMENT	16. MONITORING WELLS/BORINGS IN THE RIGHT-OF-WAY (TRAFFIC REVIEW OF DETOUR PLANS REQUIRED ON ALL THOROUGHFARES)	EACH	15164	7/24/2018	$155.00
IV Q	COMMUNITY DEVELOPMENT	17. MONITORING WELLS/BORINGS IN THE RIGHT-OF-WAY, ADDITIONAL (EACH ADDITIONAL WELL/BORING SITE)	EACH	15164	7/24/2018	$40.00
IV R	COMMUNITY DEVELOPMENT	18. PAVING REPAIR (100 SQUARE FEE OR LESS OF EXCAVATED SURFACE AREA)	EACH	15164	7/24/2018	$235.00
IV S	COMMUNITY DEVELOPMENT	19. PAVING REPAIR-ADDITIONAL (PAVING OVER 100 SQUARE FEET/PER SQUARE FOOT)	PER SQUARE FOOT	15164	7/24/2018	$1.17
IV T	COMMUNITY DEVELOPMENT	20. SEWER TIE-IN (EXISTING LATERAL, EACH)	EACH	15164	7/24/2018	$470.00
IV U	COMMUNITY DEVELOPMENT	21. SEWER TIE-IN (NEW CONNECTION TO MAIN IF LESS THAN 5' DEEP, EACH)	EACH	15164	7/24/2018	$1,175.00
IV V	COMMUNITY DEVELOPMENT	22. SEWER TIE-IN (NEW CONNECTION TO MAIN IF MORE THAN 5' DEEP, EACH)	EACH	15164	7/24/2018	$1,485.00
IV W	COMMUNITY DEVELOPMENT	23. TRAFFIC DETOUR INSPECTION	EACH	15164	7/24/2018	$155.00
IV X	COMMUNITY DEVELOPMENT	24. TREE TRIMMING AND/OR STUMP REMOVAL PER LOCATION (FIRST DAY]	EACH	15164	7/24/2018	$155.00
IV Y	COMMUNITY DEVELOPMENT	25. TREE TRIMMING AND/OR STUMP REMOVAL PER LOCATION (EACH ADDITIONAL DAY)	EACH	15164	7/24/2018	$155.00
IV Z	COMMUNITY DEVELOPMENT	26. UTILITY POTHOLING (EACH)	EACH	15164	7/24/2018	$315.00
IV AA	COMMUNITY DEVELOPMENT	27. WATER MAIN HOT TAP (EACH)	EACH	15164	7/24/2018	$785.00
IV BB	COMMUNITY DEVELOPMENT	28. WATER SERVICE INSTALLATION 2" OR SMALLER/EACH SERVICE, PLUS ADDITIONAL FEE BASED ON PAVING REPAIR REQUIRED	EACH	15164	7/24/2018	$785.00
IV CC	COMMUNITY DEVELOPMENT	29. WATER SERVICE INSTALLATION 3" OR LARGER/EACH SERVICE, PLUS ADDITIONAL FEE BASED ON PAVING REPAIR REQUIRED	EACH	15164	7/24/2018	$1,020.00
IV DD	COMMUNITY DEVELOPMENT	30. INSPECTIONS NOT LISTED (PER HOUR)	PER HOUR	15164	7/24/2018	$155.00
IV EE	COMMUNITY DEVELOPMENT	31. ENCROACHMENT PERMIT PLAN REVIEW (PER HOUR) (PLANS EXAMINER)	PER HOUR	15164	7/24/2018	$165.00
V		**STREET CUT FEE**				
V A	COMMUNITY DEVELOPMENT	1. CONTRACTORS MAKING EXCAVATIONS WITHIN THE CITY'S PAVED RIGHT OF WAY	PER SQUARE YARD OF TRENCH AREA	14314	4/23/2013	$5.07
V B	**COMMUNITY DEVELOPMENT**	**2. STREET CUT FEE WAVED FOR PUBLIC UTILITIES GRANTED FRANCHISES BY STATE OR STATUTE OR BY A**				
VI	**COMMUNITY DEVELOPMENT**	**OVERSIZE LOAD AND OVERWEIGHT TRUCK PERMIT**				
VI A	COMMUNITY DEVELOPMENT	1. OVERSIZE SINGLE TRIP ENCROACHMENT PERMIT	EACH	14314	4/23/2013	$15.00
VI B	COMMUNITY DEVELOPMENT	2. OVERSIZE ANNUAL MULTIPLE TRIP ENCROACHMENT PERMIT (WHERE THE SAME ROUTE AND IDENTICALLY SIZED VEHICLE LOAD USED)	EACH	14314	4/23/2013	$75.00
VI C	COMMUNITY DEVELOPMENT	OVERWEIGHT SINGLE TRIP ENCROACHMENT PERMIT I	EACH	14314	4/23/2013	$16.00
VI D	COMMUNITY DEVELOPMENT	OVERWEIGHT MULTIPLE TRIP ENCROACHMENT PERMIT (WHERE THE SAME ROUTE IS USED)	EACH	14314	4/23/2013	$90.00
VI E	COMMUNITY DEVELOPMENT	INSPECTIONS (AS NEEDED) BILLED AT COST	PER HOUR			
VII	COMMUNITY DEVELOPMENT	REFUNDS-LESS AMOUNT WITHHELD FOR PROCESSING COSTS	EACH	14314	4/23/2013	$61.97

IX E10	COMMUNITY DEVELOPMENT	EACH BOILER OR COMPRESSOR OVER 30 HP, UP TO AND INCLUDING 50 HP, OR FOR EACH ABSORPTION SYSTEM OVER 1,000,000 BTU/H, UP TO AND INCLUDING 1,750,000 BTU/H	EACH	14314	4/23/2013	$71.27
IX E11	COMMUNITY DEVELOPMENT	EACH BOILER OR REFRIGERATION COMPRESSOR OVER 50 HP, OR EACH ABSORPTION SYSTEM OVER 1,750,000 BTU/H	EACH	14314	4/23/2013	$118.78
IX E12	COMMUNITY DEVELOPMENT	FOR EACH AIR-HANDLING UNIT, UP TO AND INCLUDING 10,000 CUBIC FEET PER MINUTE, INCLUDING ATTACHED DUCTS	EACH	14314	4/23/2013	$13.94
IX E13	COMMUNITY DEVELOPMENT	FOR EACH AIR-HANDLING UNIT OVER 10,000 CFM	EACH	14314	4/23/2013	$23.76
IX E14	COMMUNITY DEVELOPMENT	FOR EACH EVAPORATIVE COOLER OTHER THAN A PORTABLE TYPE (EACH)	EACH	14314	4/23/2013	$13.94
IX E15	COMMUNITY DEVELOPMENT	FOR EACH VENTILATION FAN CONNECTED TO A SINGLE DUCT (EACH)	EACH	14314	4/23/2013	$10.07
IX E16	COMMUNITY DEVELOPMENT	FOR EACH VENTILATION SYSTEM WHICH IS NOT A PORTION OF ANY HEATING OR AIR CONDITIONING SYSTEM AUTHORIZED BY A PERMIT	EACH	14314	4/23/2013	$13.94
IX E17	COMMUNITY DEVELOPMENT	FOR THE INSTALLATION OF EACH HOOD WHICH IS SERVED BY MECHANINCAL EXHAUST, INCLUDING DUCTS FOR SUCH HOOD	EACH	14314	4/23/2013	$13.94
IX E18	COMMUNITY DEVELOPMENT	FOR THE INSTALLATION OR RELOCATION OF EACH COMMERCIAL OR INDUSTRIAL TYPE INCINERATOR	EACH	14314	4/23/2013	$97.09
IX E19	COMMUNITY DEVELOPMENT	EACH APPLIANCE OR PIECE OF EQUIPMENT REGULATED BY THE CODE	EACH	14314	4/23/2013	$13.94
IX E20	**COMMUNITY DEVELOPMENT**	**FUEL/GAS PIPING**				
IX E20a	COMMUNITY DEVELOPMENT	FOR EACH GAS PIPING SYSTEM UP TO AND INCLUDING FOUR OUTLETS (EACH)	EACH	14314	4/23/2013	$5.53
IX E20b	COMMUNITY DEVELOPMENT	FOR EACH GAS PIPING SYSTEM OF FIVE OR MORE OUTLETS, EACH OUTLET	EACH	14314	4/23/2013	$1.39
IX E21	**COMMUNITY DEVELOPMENT**	**PROCESS PIPING**				
IX E21a	COMMUNITY DEVELOPMENT	FOR EACH HAZARDOUS PROCESS PIPING (HPP) SYSTEM UP TO AND INCLUDING FOUR OUTLETS	EACH	14314	4/23/2013	$9.04
IX E21b	COMMUNITY DEVELOPMENT	FOR EACH PIPING SYSTEM OF FIVE OR MORE OUTLETS, EACH OUTLET	EACH	14314	4/23/2013	$1.86
IX E21c	COMMUNITY DEVELOPMENT	FOR EACH NON-HAZORDOUS PROCESS PIPING (NPP) SYSTEM, UP TO AND INCLUDING FOUR OUTLETS	EACH	14314	4/23/2013	$3.61
IX E21d	COMMUNITY DEVELOPMENT	FOR EACH PIPING SYSTEM OF FIVE OR MORE OUTLETS, EACH OUTLET	EACH	14314	4/23/2013	$0.93
IX F	**COMMUNITY DEVELOPMENT**	**PLUMBING PERMIT FEES**				
IX F1	COMMUNITY DEVELOPMENT	FOR EACH PLUMBING FIXTURE, TRAP OR SET OF FIXTURES ON ONE TRAP	EACH	14314	4/23/2013	$12.39
IX F2	COMMUNITY DEVELOPMENT	FOR EACH BUILDING SEWER AND EACH TRAILER PARK SEWER	EACH	14314	4/23/2013	$31.50
IX F3	COMMUNITY DEVELOPMENT	RAINWATER SYSTEMS PER DRAIN (INSIDE BUILDINGS)	EACH	14314	4/23/2013	$12.39
IX F4	COMMUNITY DEVELOPMENT	FOR EACH INDUSTRIAL WASTE SAMPLE WELL	EACH	14314	4/23/2013	$25.30
IX F5	COMMUNITY DEVELOPMENT	FOR EACH PRIVATE SEWAGE DISPOSAL SYSTEM	EACH	14314	4/23/2013	$97.09
IX F6	COMMUNITY DEVELOPMENT	FOR EACH WATER HEATER AND/OR VENT	EACH	14314	4/23/2013	$16.01
IX F7	COMMUNITY DEVELOPMENT	FOR EACH INDUSTRIAL WASTE PRE-TREATMENT INTERCEPTOR, INCLUDING ITS TRAP AND VENT, EXCLUDING KITCHEN-TYPE GREASE INTERCEPTORS FUNCTIONING AS A FIXTURE	EACH	14314	4/23/2013	$25.30
IX F8	COMMUNITY DEVELOPMENT	FOR INSTALLATION, ALTERATION, OR REPAIR OF WATER PIPING AND/OR WATER TREATING EQUIPMENT, EACH UNIT	EACH	14314	4/23/2013	$6.30
IX F9	COMMUNITY DEVELOPMENT	FOR REPAIR OR ALTERATION OF DRAINAGE OR VENT	EACH	14314	4/23/2013	$6.30
IX F10	COMMUNITY DEVELOPMENT	FOR EACH LAWN SPRINKER SYSTEM ON ANY ONE METER, INCLUDING BACKFLOW PROTECTION DEVICES THEREOF	EACH	14314	4/23/2013	$19.11
IX F11	COMMUNITY DEVELOPMENT	FOR ATMOSPHERIC-TYPE VACUUM BREAKERS NOT INCLUDED IN ITEM 12 BELOW	EACH			
IX F11a	COMMUNITY DEVELOPMENT	1 TO 5 UNITS (EACH)	EACH	14314	4/23/2013	$16.01
IX F11b	COMMUNITY DEVELOPMENT	OVER 5, EACH UNIT	EACH	14314	4/23/2013	$3.61
IX F12	**COMMUNITY DEVELOPMENT**	**FOR EACH BACKFLOW PROTECTIVE DEVICE, OTHER THAN ATMOSPHERIC-TYPE VACUUM BREAKERS**				
IX F12a	COMMUNITY DEVELOPMENT	2 INCHES OR SMALLER (EACH)	EACH	14314	4/23/2013	$16.01
IX F12b	COMMUNITY DEVELOPMENT	OVER 2 INCHES (EACH)	EACH	14314	4/23/2013	$31.50
IX F13	COMMUNITY DEVELOPMENT	FOR EACH GAS PIPING SYSTEM, UP TO AND INCLUDING FOUR OUTLETS	EACH	14314	4/23/2013	$6.30
IX F14	COMMUNITY DEVELOPMENT	FOR EACH GAS PIPING SYSTEM OF FIVE OR MORE OUTLETS, EACH OUTLET	EACH	14314	4/23/2013	$1.60
IX F15	**COMMUNITY DEVELOPMENT**	**SWIMMING POOL, SPA AND HOT TUB - PLUMBING PERMITS**				
IX F15a	COMMUNITY DEVELOPMENT	PUBLIC POOL	EACH	14314	4/23/2013	$63.52
IX F15b	COMMUNITY DEVELOPMENT	PRIVATE POOL	EACH	14314	4/23/2013	$42.35
IX F15c	COMMUNITY DEVELOPMENT	POOL FILLING SYSTEM	EACH	14314	4/23/2013	$16.01
IX F15d	COMMUNITY DEVELOPMENT	EACH WATER HEATER AND/OR VENT	EACH	14314	4/23/2013	$16.01
IX F15e	COMMUNITY DEVELOPMENT	GAS PIPING SYSTEM, EACH UNIT	EACH	14314	4/23/2013	$6.30

CITY OF OXNARD CALIFORNIA

Fiscal Year 2026-27

Proposed Budget

June 1, 2026

FY 2026–27 Budget

Where We Are Today

- Structurally balanced General Fund budget
- $247M projected General Fund revenues
- Maintaining 16.6% reserve policy
- Continued investment in public safety, streets, parks, and community services
- Improved financial position and credit ratings
- Available funding should only be used for one-time expenses

Challenges Ahead

- Measure O sunset; Loss of ~$21M annual revenue
- Rising costs of energy, labor, goods and services
- Increasing infrastructure needs as City has decades of deferred maintenance
- Turbulent world political order

FY 2026–27 Budget Snapshot

CITY OF OXNARD CALIFORNIA

$247M General Fund Revenues

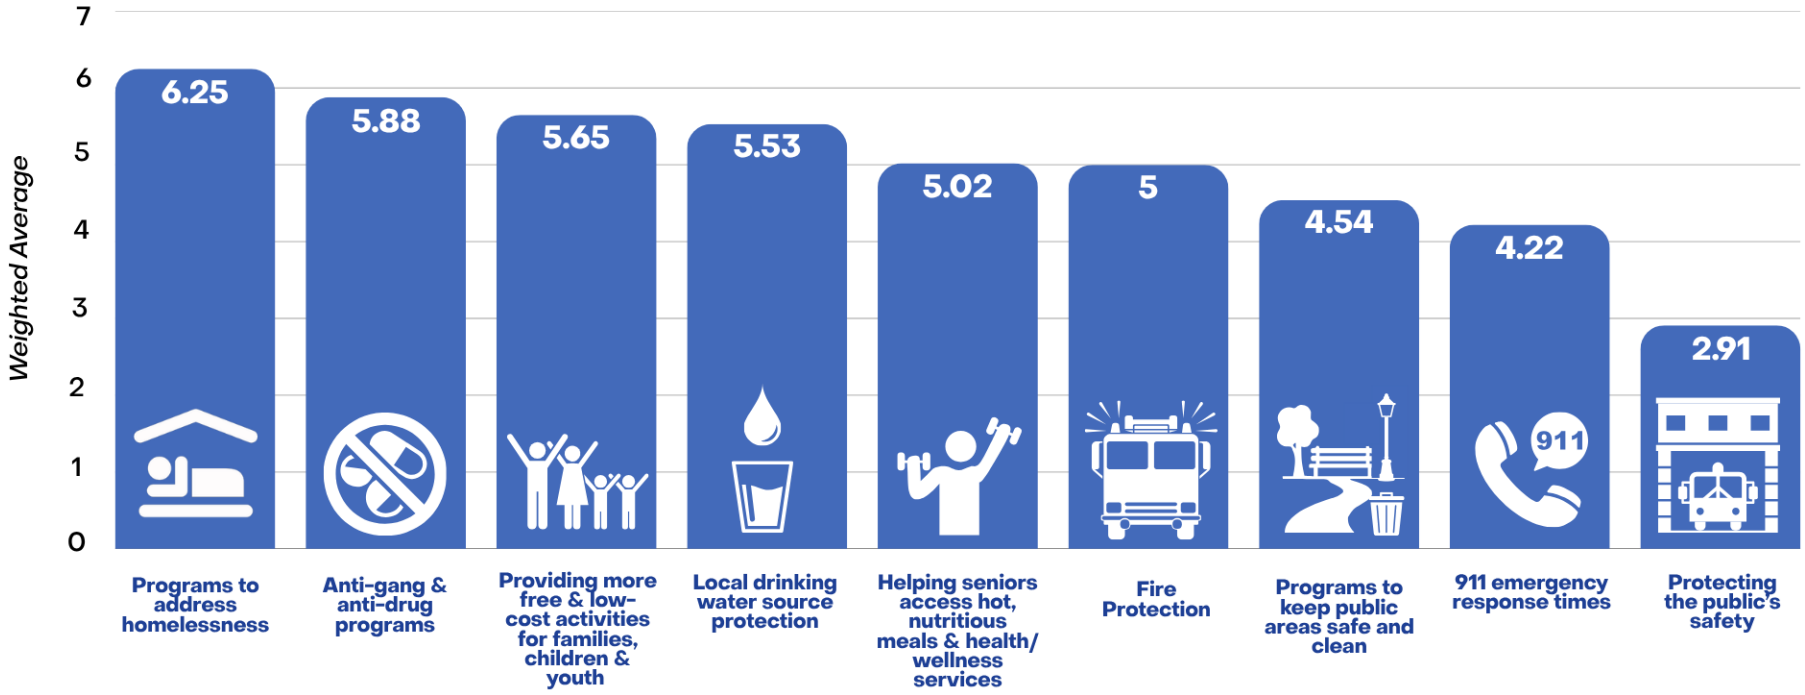
$245M General Fund Expenditures*

**Includes new mandatory expenses*

$16M Department Needs

~$42M CIP Needs (Non Utility)

$12.7M Available General Fund Balance (one-time)



MEASURE ~$14M Available Measure O Funds (one-time)

~14.9M Recession Protection Fund

The proposed budget is structurally balanced and staff recommends that available fund balance be used for one-time expenses.

Community Survey Results – Ranked Priorities*

Top-ranked community priorities, from left (highest priority) to right

*"Join the Conversation" final survey results as of 5/19/26, based on total combined 1,809 English and Spanish Survey Monkey ranked choice responses. Higher weighted average scores reflect higher overall rankings, with the top score (6.25) indicating the community's #1 priority.

Community Survey Results – Written Comments*

Snapshot of the Top 10 most referenced topics under "Suggestions for Additional Service Priorities"

"Join the Conversation" final survey results as of 5/19/26 featuring the Top 10 most referenced topics from 1,030 written comments in English and Spanish.

Note: This is an open-ended comment section of the survey, which is attached to the staff report. Many respondents referenced multiple topics in their comments. This snapshot shows an overview of the 10 most frequently referenced topics.

Council Priorities Guide Budget Recommendations

2026 - 2030 CITY COUNCIL 5-YEAR PRIORITIES

Quality of Life

1. Maintain youth development and wellness programs
2. Maintain senior wellness programs and build the Council-approved new Senior Center
3. Continue to address homelessness in Oxnard
4. Build an Aquatics Center in South Oxnard and the Mayor to pursue open hours for public use of high school's swiming pools
5. Complete NAGPRA compliance process in order to open the Carnegie and continue the PACC with the Council's direction about the two contracts for Sterling Venue Ventures and OPAC non-profit

Economic Development

1. Focus on business retention and expansion and new business attraction
2. Train and prepare youth and adults for employment at local businesses through the Oxnard Employee Pathways
3. Revitalize the Hueneme/Saviers/Pleasant Valley/Channel Islands Corridor and the City's building at Saviers & Channel Islands Blvd. (2900 S. Saviers Rd.)
4. Renovate 4th St. between Downtown and train station to create a safe connection between the transit center and downtown
5. Make improvements to Del Sol Stadium (lighting, field and seating)

Public Safety

1. Maintain 911 emergency response times
2. Maintain fire protection services
3. Restore Neighborhood Police program and establish a Park Ranger program
4. Restore and possibly increase paramedic squads
5. Complete building out a modern disaster preparedness program to prepare the City for response and recovery from earthquakes, flooding and other disasters, and create climate resilience

** Modest and incremental implementation of security cameras; data driven by OPD*

Infrastructure and Natural Resources

1. Maintain proper street paving cycle and incorporate bike infrastructure
2. Maintain proper maintenance of parkways and medians, tree trimming cycle, and clean up the gateways to the City, and maintain city parks and make upgrades to the park bathrooms
3. Ensure adequate future water supply
4. Continue to repair alleys
5. Continue to repair seawalls

Organizational Effectiveness

1. Maintain financial sustainability
2. Maintain the City's financial reserves and establish sufficient reserves to respond to disasters such as earthquakes and floods
3. Invest in appropriate staffing levels to get the job done
4. Strengthen the City's cybersecurity and data protection
5. Invest in staff training and development

CITY OF OXNARD CALIFORNIA

New

Bondable

Financial Principles

Maintain Fund Balance	Debt Capacity	Budget Flexibility	Financial Performance	Management	Cyber Security	Financial Reporting
A minimum General Fund reserve of two months of operating expenses, or 16.6%	• Including debt as a % of Governmental Fund Revenues • Target would be less than 25%	• Including fixed costs as a % of total Government Fund Expenditures (*i.e. Debt Service, Pension, Health Care)* • Target Fixed Cost would be less than 30% of total expenditures	• Year end results would be within 10% of budget	• Demonstrating how government is making a difference in the lives of residents • Being proactive and experienced • Providing accountability & transparency	• Demonstrating sound cyber policies will protect the City's S&P rating • Data breaches or leaks from hackers could result in a ratings downgrade	• Producing financial statements and reports that receive clean opinions from external auditors
PROGRESS MILESTONES (as of May 2026)						
City continues to meet its reserve policy: • FY 23-24 = 13% • FY 24-25 = 16.6% ✓ • FY 25-26 = 16.6% ✓ • FY 26-27 = 16.6% ✓	City has improved its debt capacity to "strong" based upon methodology used by Standard & Poors	City has created budget flexibility to address changing environment, funding an economic protection reserve in amount $14.9M, which represents additional coverage to 6.4% annual operating expenses.	Increased transparency through monthly reports to the City Council and providing updated information on City website: **oxnard.gov/open-government**	• Maintaining and restoring services while addressing the long term liabilities • Stable leadership team	• City strengthening cyber policies	• 6 consecutive years with an audited unmodified opinion

Continuing to Improve Oxnard's S&P Rating

S&P Ratings Scale

Letter Grade	Capacity to Repay
AAA	Highest credit quality, minimum credit risk
AA+, AA, AA-	Very high credit quality, very low credit risk
A+, A, A-	High credit quality (upper-medium grade)
BBB+, BBB, BBB-	Good credit quality, currently low credit risk
BB+, BB, BB-	Speculative elements, issuer faces major uncertainties and adverse conditions
B+, B, B-	High credit risk, but issuer still able to meet its financial commitments
CCC	Issuer currently vulnerable, default likely
CC	Issuer currently highly vulnerable, near default
R, SD, D	Lowest rating, typically in default on some (SD) or all or its financial obligations

	2017	2021	2022	2024	2025
Issuer Credit Rating (ICR)	A (Stable Outlook)	A (Stable Outlook)	**A+** (Stable Outlook)	**AA-** (Stable Outlook)	AA- (Stable Outlook)
General Fund Lease	A- (Stable Outlook)	A- (Stable Outlook)	**A** (Stable Outlook)	**A+** (Stable Outlook)	A+ (Stable Outlook)
Water Fund	A (Stable Outlook)	A (Stable Outlook)	A (**Positive** Outlook)	A (Positive Outlook)	**A+** (Stable Outlook)
Wastewater Fund	BBB (Stable Outlook)	**A-** (Stable Outlook)	**A** (Stable Outlook)	A (Stable Outlook)	**A+** (Stable Outlook)
Gas Tax Fund	A (Stable Outlook)	**A+** (**Positive** Outlook)	**AA-** (Stable Outlook)	**AA-** (Stable Outlook)	AA (Stable Outlook)

Updated: July 2025

Oxnard's Budget Outlook – Timeline

WE ARE HERE

PRE-2021

Oxnard experienced a $9.2M structural deficit

2021 - 2023

The City performed service restorations with the voters' approval of Measure E

2023 - 2025

Departments requested additional restoration needs but funds were limited

FY 26-27 Proposed Budget

Balanced budget; however, state, county and school budget cuts are impacting revenue sources for City

Post-2028

Measure O sunsets; General Fund reduction of ~$21M annually

Oxnard's Budget Outlook – External Risks

What We Know

- Measure O sunset; reduction of ~$21M annually
- Federal budget cuts
- State budget cuts
- County budget cuts
- Camarillo Costco opening
- Pending state online sales tax reapportionment (Amazon)

What Keeps Changing

- Economic conditions
- Tariffs
- Inflation
- Global conflicts
- Supply chain
- Immigration/labor supply
- Lawsuits

Your Local Tax Dollars at Work

How the Budget Has Changed Since Measure E

Pre-Measure E
FY 2020-2021

Structural deficit

Reduced staffing

Deferred maintenance

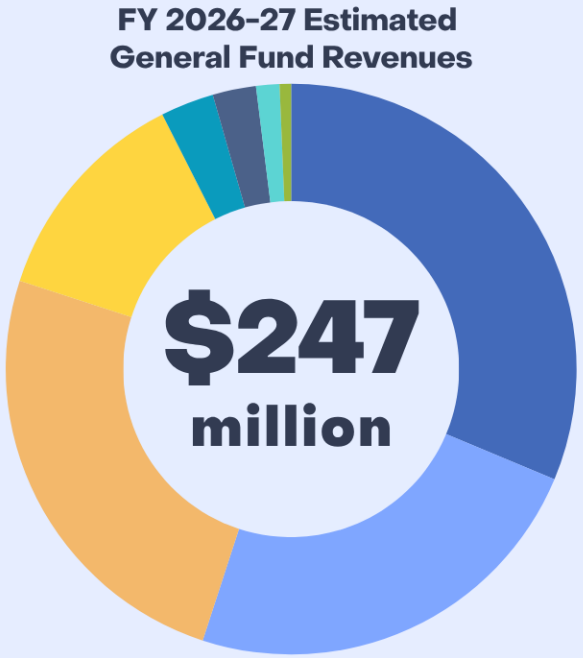
Critically low reserves
(Depleted to 2.2% during pandemic)

Post-Measure E

Balanced budget

Service restoration

Increased infrastructure investment

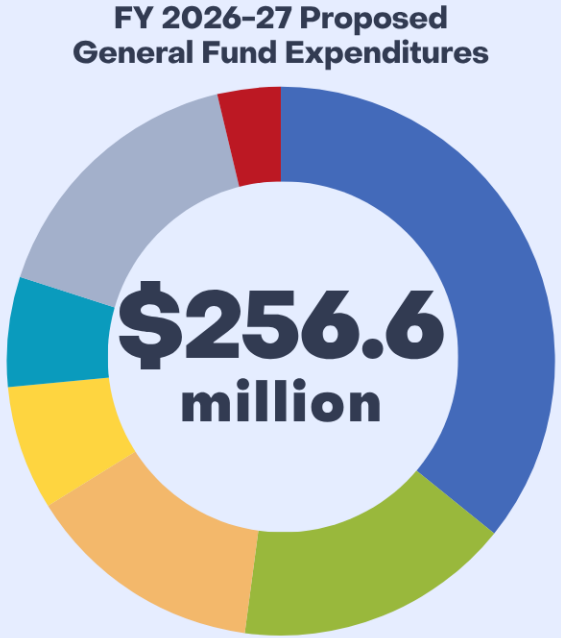


16.6% reserve policy

General Fund FY 2026-27 Estimated Preliminary* Revenues

*Preliminary figures as of May 15, 2026

The City's General Fund revenue is the primary source for funding city operations such as Fire, Police, Public Works, Parks and Recreation through property tax, sales tax, and other revenues.



Revenue by Sources	FY 2026-27
Property Tax	$77,341,669
Sales Tax (Measure E)	$58,570,748
Sales Tax (Bradley Burns)	$61,756,983
Non-Tax Revenues	$30,962,993
Business License Tax	$7,470,000
Transient Occupancy Tax	$6,069,350
Franchise Tax	$3,270,813
Other Taxes	$1,600,000

General Fund FY 2026-27 Proposed Expenditures*

**Preliminary figures as of May 15, 2026*

Expenses (By Department)	FY 2026-27
Police	$91,869,470
Fire	$41,821,811
Public Works	$36,045,049
Cultural & Community Services	$18,828,300
Community Development	$16,630,262
All Other	$41,823,504
One-Time Projects (Fund Balance)	$9,575,000

Where Council Direction is Needed

KEY FISCAL YEAR 2026-27 BUDGET DECISIONS

A. General Fund Supplemental Requests

- Determine which departmental needs should be funded
- Which requests should be one-time vs. ongoing
- Decide whether to spend General Fund balance

B. Measure O Spending Priorities

Review one-time funding requests:

- Fire Academy funding
- Ladder Truck purchase
- CIP projects

C. Citywide Infrastructure Needs

Council must prioritize Capital Improvement projects (CIP) as total requests exceed available funding.

Recommendations include:

- Streets & alleys
- Facilities
- Public safety infrastructure
- Parks projects

Available Funding for Council Prioritization

The City Council may apply these funds to various department and Capital Improvement Project (CIP) needs. However, staff does not recommend using the Recession Protection Fund at this time.

Funding Source	Amount	Type
General Fund Balance (one-time)	**$12.7M**	One-time
Measure O	**$14M**	Ending soon
Recession Protection Fund	**$14.9M**	Emergencies

Mandatory

A. General Fund Supplemental Requests

The following are **mandatory** expenses totaling $1.08M

One-Time Expenses

Measure O | Overview

MEASURE

Measure O is a voter-approved ½ cent sales tax that is ending soon

- Supports Public Safety, Infrastructure (parks, roads & alleys, etc.), and Community Services

FY 2026-27 Estimated Revenue is $20.2M*

- Weaning schedule includes funding one-time, high-impact projects (such as CIP) to prepare for sales tax sunset

Ongoing Operational Costs for FY 26–27: $5.5M

One-Time Funding available for FY 26–27: ~$14M

Proposed FY 26-27 Budget:

$19.5M

*Preliminary figures as of May 15, 2026.

Measure O | Weaning Schedule

MEASURE O	FY22-23	FY23-24	FY24-25	FY25-26	FY26-27	March 2029
Year-over-Year Weaning to Absorb Programs into General Fund	Fire Station 8 Operations (including 21 positions)	Enhancing Community Police (16 positions) Homeless Program	911 System (CAD/RMS) including 3 positions Integrated Library System Library Wifi Operational	Maintenance of the City's Intelligent Transportation Systems (ITS) Preschool to You College Park Maintenance	East Village Maintenance Safe Homes, Safe Families PAL Operations Fire Advanced Life Support (ALS) College Park Programs	Measure O Ends
GENERAL FUND*	$4,758,918	$5,168,968	$1,040,299	$1,089,164	$957,838	

The General Fund has absorbed ~$13M of Measure O programs and staffing.

Measure O | FY 2026-27

B. Measure O Spending Priorities

The City has gradually shifted Measure O away from ongoing operational costs and toward one-time infrastructure and equipment investments.

$5.5M is budgeted towards remaining Measure O programs that have not been weaned.

Half Cent Sales Tax Measure O Summary by Program

Programs	Frequency	FY26-27 Proposed
Fire Station 8 Lease Debt	Ongoing	1,388,406

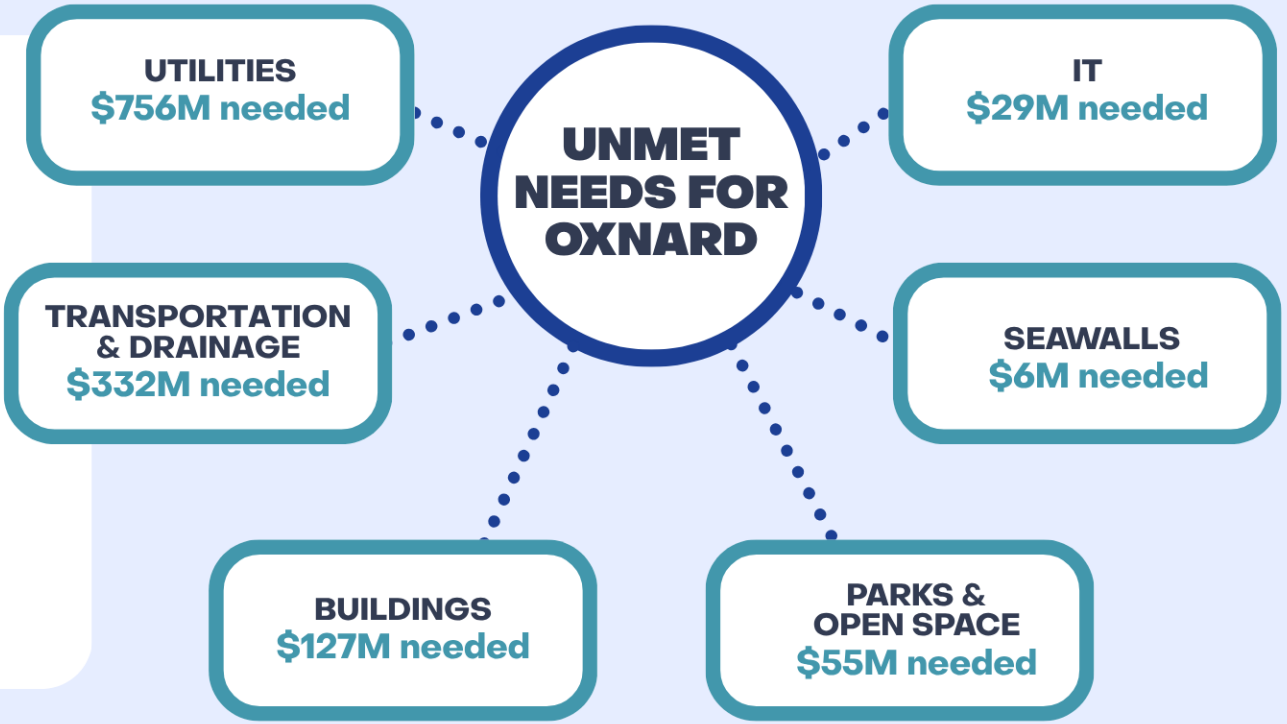
PROPOSED TOTAL VALUE OF

$1.3B

PROGRAMMED OVER FIVE YEARS



There is a significant gap between needs and available funding.

Capital Improvement Program (CIP)

As with most cities, Oxnard has decades-old deferred maintenance needs for infrastructure repair and replacement.

Current funding sources are insufficient to address all identified needs. Delay will unfortunately compound the challenge of addressing the unmet needs of reinvestment within the City.

JUNE 16	City Council Proposed Adoption of the FY 2026-27 Operating Budget and Capital Improvement Budget

BUDGET DOCUMENTS

Proposed FY 26-27 budget published online at **www.oxnard.gov/budget**

CITY OF OXNARD CALIFORNIA

END OF PRESENTATION

FY 2026-27 ANNUAL BUDGET
Additional Information

City Council
June 16, 2026

Thomas Liu, Assistant Chief Financial Officer

CITY OF OXNARD CALIFORNIA

RECOMMENDATION

That the City Council adopt the following resolutions

a. A Resolution of the City Council of the City of Oxnard Approving the City Operating and Capital Improvement Budget for Fiscal Year 2026-27; and
b. A Resolution of the City Council of the City of Oxnard Authorizing Full-Time Equivalent Positions in the City Service Effective July 1, 2026, in accordance with the Operating Budget for the Fiscal Year 2026-27; and
c. A Resolution of the City Council of the City of Oxnard Authorizing Classification and Salary Schedules and Approving the attached Classification and Salary Schedule; and
d. A Resolution of the City Council of the City of Oxnard Establishing Financial Management Policies; and
e. A Resolution of the City Council of the City of Oxnard Establishing an Appropriation Limit for the Fiscal Year 2026-27; and
f. A Resolution of the City Council of the City of Oxnard Adopting a Master Fee Schedule

- **Adopted Budget**
  - The Revenue and Expenditures approved by City Council at their budget adoption meeting in June for the following fiscal year starting July 1.
- **Revised Budget**
  - The Adopted budget plus City Council approved amendments during the fiscal year and any administrative adjustments for the carryover of unspent budget from prior years.
  - Resolutions included with the Budget item include the details of what type of expenditures are eligible for carryover, and include unspent CIP project balances and Multi-year project unspent balances.
- **Proposed Budget**
  - The Revenue and Expenditures recommended by the City Manager to City Council for budget adoption at their meeting in June for the following fiscal year starting July 1.
- **Available Fund Balance**
  - The amount of money held in a fund that is available to be committed to a new expenditure. = Council Reserve + one time available fund balance.

City Accomplishments

The City continues to deliver key services aligned with Council Priorities, with some highlights below:

- **Public Safety**:
  - Emergency Response: Responded to more than 21,719 emergency calls, resulting in approximately 33,439 individual unit responses. Maintained a Class 2/2X ISO rating (top 3-5% nationally).
  - Conducted 16 preparedness presentations for over 275 attendees and 19 community events with engagement by over 500 people.

- **Quality of Life:**
  - Homelessness Response & Engagement: Responded to and/or initiated over 6,611 calls for service, subject stops, traffic stops, and special requests submitted via email, text, 311, or telephone to address complaints of transient encampments or other homelessness issues.
  - Community Cleanup Efforts: Hosted 24 neighborhood cleanups serving 40 neighborhoods.
  - Community Services: Hosted major community events including the Tamale Festival and Insect Fest; continued the Library's reinvention efforts which have resulted in a 50% increase in foot traffic, 183% increase in circulation, 113% increase in programs offered, and 84% increase in program attendance.

- **Infrastructure and Natural Resources:**
  - Water: Treated and delivered approximately 20 million gallons of safe and reliable drinking water daily.
  - Wastewater: Treated approximately 6.4 billion gallons of wastewater.
  - Stormwater: Inspected and cleaned approximately 4,870 catch basins.
  - Infrastructure Maintenance: Repaired or patched 1,433 potholes and pruned 3,726 trees.
  - Street Improvements: Completed construction of major arterial resurfacing projects, including Hueneme Road, Gonzales Road, and Oxnard Boulevard.

- **Economic Development:**
  - Development Processing: Performed over 23,000 building inspections, issued approximately 500 encroachment permits, and issued nearly 5,000 building permits.
  - Housing: Oversaw the completion of 270 units of affordable housing.

- **Organizational Effectiveness:**
  - Drafted a wide range of ordinances and resolutions this year, covering tenant protections, rent stabilization updates, solid waste rates, public safety regulations, environmental standards, and multiple other Council-directed policy areas.
  - Citywide Technology Upgrade: Completed migration of all city computers to Windows 11.
  - Financial Stewardship: The City has received nine S&P credit rating upgrades in the past four years, and all major funds now

Changes since June 1, 2026 Public Hearing

1. Addition of the following Supplemental Proposals to the General Fund
    1. Recreation – Maintain Temporary Labor Hours: $110,000
    2. Recreation – Youth Development Programs: $100,000
    3. Cultural Arts – Oxnard Arts Academy: $30,000
    4. Police – Psychologist Services: $60,000
    5. Police – Technology – Electronic Citation Printers: $100,000
    6. Community Development - Code Compliance Overtime: $30,000

2. Modification of the CIP breakdown between Measure O and General Fund Balance, with the results summarized below
    1. Neighborhood Street Resurfacing: $4.2M – General Fund and $3.9M – Measure O
    2. Citywide Alleyway Resurfacing/Reconstruction: $4.3M – Measure O
    3. Arterial Street Resurfacing: $4.4M – General Fund

TOTAL AVAILABLE FUND BALANCE	**68,692**	**58,662**
% OF OPERATING BUDGET IN RESERVE	**29.4%**	**23.7%**

Fund balance is a measure of the resources available in a governmental fund. For financial reporting, GAAP establishes categories of fund balance based on the type and source of constraints placed and how the resources can be spent. For budgetary purposes fund balance represents the total amount accumulated from prior years.

Available fund balance usually increases in fiscal years when revenues exceed expenditures. Revenues are generally recognized within the fiscal year, while expenditures for large projects typically occur over multiple years. As a result, expenditures may exceed current-year revenues when prior-year appropriations and available fund balances are used to support multi-year projects. This pattern is expected and reflects project execution and timing rather than imbalances.

Fund balance is a measure of the resources available in a governmental fund. For financial reporting, GAAP establishes categories of fund balance based on the type and source of constraints placed and how the resources can be spent. For budgetary purposes fund balance represents the total amount accumulated from prior years.

Available fund balance usually increases in fiscal years when revenues exceed expenditures. Revenues are generally recognized within the fiscal year, while expenditures for large projects typically occur over multiple years. As a result, expenditures may exceed current-year revenues when prior-year appropriations and available fund balances are used to support multi-year projects. This pattern is expected and reflects project execution and timing rather than imbalances.

As a result, expenditures may exceed current-year revenues when prior-year appropriations and available fund balances are used to support multi-year projects. This pattern is expected and reflects project execution and timing rather than imbalances.

- California Assembly Bill 2561 (AB 2561) / Govt. Code 3502.3 mandates that local public agencies in California annually report staffing vacancies and recruitment efforts to promote transparency and address ongoing staffing shortages in the public sector. If vacancies within a single bargaining unit reach or exceed 20% of the total authorized full-time positions, and upon request by the recognized employee organization, the agency must provide additional information during a public hearing.

- As of May 1, 2026, the City of Oxnard's overall vacancy rate for allocated positions stands at 9.35%. This is a reduction from last year's vacancy rate of 9.66%. Vacancy rates across all bargaining units remain well below the 20% threshold. In the past fiscal year 2025-26, the City hired 89 new employees, promoted 110 existing staff members, and experienced 91 separations. We currently have 140.25 total vacant positions and 45 active job postings.

- Our success in reducing vacancies this fiscal year is the result of strategic investment in Human Resources staffing and a comprehensive analysis of our salary structures relative to neighboring agencies. We have also reassessed and adjusted the minimum qualifications for several positions. These changes have helped us attract and retain qualified candidates more effectively by staying competitive relative to the market.

RECOMMENDATION

That the City Council adopt the following resolutions

a. A Resolution of the City Council of the City of Oxnard Approving the City Operating and Capital Improvement Budget for Fiscal Year 2026-27; and
b. A Resolution of the City Council of the City of Oxnard Authorizing Full-Time Equivalent Positions in the City Service Effective July 1, 2026, in accordance with the Operating Budget for the Fiscal Year 2026-27; and
c. A Resolution of the City Council of the City of Oxnard Authorizing Classification and Salary Schedules and Approving the attached Classification and Salary Schedule; and
d. A Resolution of the City Council of the City of Oxnard Establishing Financial Management Policies; and
e. A Resolution of the City Council of the City of Oxnard Establishing an Appropriation Limit for the Fiscal Year 2026-27; and
f. A Resolution of the City Council of the City of Oxnard Adopting a Master Fee Schedule

Thank You

CITY COUNCIL AGENDA REPORT

REPORTS
AGENDA ITEM NO. N.6

DATE: June 16, 2026

TO: City Council

FROM: Alexander Nguyen, City Manager, (805) 385-7430, alexander.nguyen@oxnard.org

SUBJECT: Report on Measure O and Consideration of Placing the Renewal of a ½ cent Transactions (Sales) and Use Tax Measure on the November 3, 2026 Ballot.

RECOMMENDATION

That the City Council:

1. Receive a report on Measure O;
2. Consider adopting a resolution entitled: A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD, CALIFORNIA ORDERING AN ELECTION TO BE HELD ON NOVEMBER 3, 2026 TO CONSIDER THE ADOPTION OF A MEASURE ENTITLED "CITY OF OXNARD PUBLIC SAFETY, FINANCIAL STABILITY MEASURE (NO TAX RATE INCREASE)" AND REQUESTING THE COUNTY CLERK TO CONDUCT THE ELECTION, AND AUTHORIZING THE BOARD OF SUPERVISORS TO CANVASS THE RETURNS.

Please click the following link to view the required Measure M pre-recorded presentation video: https://youtu.be/epplLwFEF9k

BACKGROUND

Executive Summary

Staff recommends that the City Council place the "City of Oxnard Public Safety, Financial Stability Measure (No Tax Rate Increase)" on the November 3, 2026 ballot for Oxnard voters to decide.

The City Council does not have the authority to establish, extend or raise taxes, only to put a measure on the ballot for voter consideration. In other words, City Hall cannot change a sales tax rate; only the voters may do so.

The City of Oxnard continues to face long-term financial challenges related to deferred infrastructure maintenance while also providing essential services that our community relies on every day. As a full-service city serving more than 200,000 community members and approximately 10,000 businesses, Oxnard operates and funds its police and fire departments, streets and alleys maintenance, parks and public spaces, youth and senior programs, homeless response and disaster response. Over the past six years, the City has made significant progress rebuilding financial stability through local taxes that are solely for use in Oxnard for local programs and services. However, one of those funding sources will end soon.

Measure O is a ½ cent sales tax approved by 65% of Oxnard voters in 2008 that provides locally controlled funding for police and fire services, 911 emergency response, street paving and pothole repair, youth and senior

programs, and other vital services that our community relies on. All expenditures of funds raised by Measure O must be publicly approved by the City Council. Additionally, the Measure O Citizen Oversight Committee ensures that expenditures are in compliance with the voter-approved measure. Measure O funding is scheduled to end in March 2029 unless renewed by voters.

Since 2007, the City has regularly engaged and surveyed the community to provide insights on the wants and needs for Oxnard programs and services. Maintaining this connection with the community has been vital over the past 20 years, as the City has experienced the same challenges that many jurisdictions faced relating to the Great Recession (2007-2009), which was followed by California's budget crisis that removed local funding sources and the State's dissolution of Redevelopment Agencies (RDAs) in 2012, which reduced funding for infrastructure and affordable housing.

Most recently, the City experienced the 2020 pandemic recession that decimated the City's reserve funds and was followed by periods of supply chain disruption and inflation. Today, we face similar challenges where both the State and the Federal government are cutting budgets for programs that our community members continue to inform us are important priorities to our community. As budgets are cut for youth and senior programs, disaster preparedness, response, and recovery, and resources for public safety/911 response times, Oxnard voters face an important inflection point, where they could consider to maintain the current level of City programs and services without increasing taxes, or reduce these programs and services to reduce their taxes by letting Measure O expire.

According to a recent opinion survey conducted by FM3 that concluded on May 3, 2026, over 7-in-10 respondents continue to think the City needs additional funding for local services. Additionally, more than 8-in-10 believe that it is more important to maintain current services than to reduce taxes. These results are in addition to the more than 1,900 English and Spanish responses to Oxnard's "Join the Conversation" survey, which ranked the community's priorities and asked for suggestions for additional priorities.

A hypothetical ballot question tested by FM3 found that nearly 7-in-10 respondents would support a locally controlled services measure that maintains the current sales tax rate with no increase. Taken together with community engagement results and long-term financial planning, community members have indicated they feel it's very important to maintain local services.

With Measure O funds ending in March 2029, the City Council should consider placing a measure "City of Oxnard Public Safety, Financial Stability Measure (No Tax Rate Increase)" on the November 3, 2026 ballot so the community can decide whether to maintain this local funding source that supports current City programs and services. If approved by the voters, the sales tax rate within the City of Oxnard will remain the same as it is today at 9.25 percent.

HISTORICAL PERSPECTIVE

The downturn of the economy starting in mid-2007, coupled with the ongoing State diversion of funding caused a leveling-off of revenues and status quo budgets. This led to Council putting a ½ cent sales tax measure on the November 4, 2008 ballot. At that time, the City was already deferring maintenance and support of street and road repairs, park developments and maintenance, and recreation services and youth programs. At the time of approval, Measure O was expected to generate $10 million annually. This funding was approved by over 65% of the voters. As shown in this report, the funding has become an important funding source for municipal services, including street repair, recreation and homeless services, and public safety. The Measure O ½ cent sales tax is scheduled to sunset in March 2029.

Dissolution of California's Redevelopment Agencies (RDAs)

Despite the new revenue source, the dissolution of California's Redevelopment Agencies (RDAs) in 2012 completely reshaped municipal finance, creating immediate budget shocks and a permanent reduction in discretionary infrastructure spending and dedicated affordable housing funding. In addition, without redevelopment, Oxnard could no longer issue tax-increment bonds directly to support public projects (parks, plazas, parking structures, etc) or subsidize retail developments. Prior to February 2012, California RDAs captured over $5 billion annually in property tax growth, but with the dissolution of RDA, the funding was only allowed to be used to pay down old debts. Cities completely lost the authority to use any of that incoming revenue on new projects, economic development incentives, or community improvements, meaning these projects could only be funded out of General Funds, bonds, or public-private projects. Again, Measure O became an important funding source for Oxnard.

Change in Leadership & Pathway to Good Governance

The 2008 recession lasted about 18 months, but it took roughly seven years (2015) for California's economy to fully return to pre-recession employment and output levels. As the economy was stabilizing, Oxnard hit another rough patch.

- **New City Manager:** A new city manager was selected in 2014, and on the heels of a District Attorney investigation, he quickly ordered an Organizational Assessment. This assessment included a 3-phased approach based on three critical building blocks of good governance: a) Corporate Support, Accountability and Value Systems, b) Ensuring Excellent Services, and c) Innovation and Focus on the Future titled “Building Blocks of Good Government”. This Assessment resulted in a strategic roadmap for the City.
- **Audit Reports:** Between 2014 and 2021, the City had a total of 186 audit findings, of which 159 were unique non-repeated findings. The corrective action plan status, as of April 2024, has only one significant deficiency related to Information Technology (IT) General Control that remains outstanding. There are no material weaknesses, non-compliance, and no best practices findings that remain.
- **Recall Election**: After the City Council voted to increase wastewater rates by more than 5 percent, Aaron Starr started a recall campaign for three council members and the Mayor in 2018. The recall failed.

Structural Budget Deficit, COVID, and Various Lawsuits

In fiscal year 2019-2020, the Oxnard City Council made very tough choices in addressing a $9.2 million General Fund structural deficit. These decisions included laying off more than 30 employees, decreasing spending on a number of programs, closing the Carnegie Art Museum, and eliminating subsidized funding for the golf course and the Performing Arts Center. The decisions, along with subsequent increases to revenue, allowed the City to close the budget gap to an operating deficit of only $2 million as of February 2020. Following that, the COVID-19 pandemic recession slashed anticipated revenues for the City's General Fund and once again exposed Oxnard’s underlying fiscal conditions, which led to a sharp reduction in revenue. The pandemic also impacted Measure O revenue, further stressing the City’s General Fund. In order to balance the budget that year, the City was required to use almost all of its reserve funding of $17.7 million, leaving the City

with a rainy day fund of only $3.4 million (2.2% of operating expenses). Again, Measure O continued to be a lifeline for Oxnard residents.

Between the years of 2020-2025, the City was forced to engage in a series of lawsuits that diverted valuable city funds towards litigation costs. One particular case lasted over three (3) years and although the City was ultimately victorious at the California Court of Appeal, it forced the City to limit or delay the scope of certain projects supported by bond financing and fund the modified projects with existing reserves. While the City was in limbo, the City continued to "cash fund" projects and lost out on historically low interest rates. For example, in the fiscal year 24-25 budget, $16 million was approved for street funding and $3.3 million for the ERP project. Had we been able to utilize a municipal bond, the cash up front amount would've been much lower, and the Council could have chosen other investments for the community,such as restoring youth and senior services, parks projects, or a variety of other needed services and projects.

Long-Term Financial Improvements & Good Governance

In 2019, the City commissioned a Resident Satisfaction and Community Priorities Survey to solicit feedback from the community on a host of issues, including City service priorities, quality of life concerns, and general community attitudes towards government accountability and increasing City revenues in order to maintain City services.

The City highly values the varied perspectives of the public it serves and seeks to continue to earn the community's trust and confidence in City practices, including institutionalizing good government provisions related to fiscal accountability, ethics, and transparency.

The current City administration continues to work to make significant strides in reforming key areas of government. Below are just a few highlights.

1. ***Sunshine Ordinance (2018):*** The City Council adopted the Sunshine Ordinance in November 2018, requiring Council agendas and reports to be published to the public twelve days before a regular meeting of Council and seven days before a special meeting. The Sunshine Ordinance policy is a substantial increase from the state law requirement of posting agendas only 72 hours before a regular City Council meeting. This ensures that residents of Oxnard have timely access to information and an opportunity to address the various legislative bodies of the City before governmental decisions are made.
2. ***Voter Approval of Measure B (2020):*** Measure B was enacted on March 3, 2020 by more than 82 percent of voters. Titled the "Oxnard Government Accountability and Ethics Act", Measure B prohibited Council members and commissioners from accepting gifts and eliminating the influences of special interests in Oxnard by imposing contribution limits to candidates for elective office, and establishing term limits, posting of City financials and contracts.
3. ***Voter Approval of Measure E (2020):*** Following the voter approved 1 ½% sales tax in 2020, the Council has made slow and steady progress that is securing Oxnard's long-term financial stability including increasing revenues which has allowed use to replenish the cities reserves from as low as 2.2% ($3.4 million) in FY 20-21, to 16.6% starting in FY 24-25.
4. ***Adoption of Council's 2021- 2025 Five-Year Priorities****:* With feedback from more than 2,000 community members, the City Council adopted its Five-Year Priorities on March 16, 2021. The priorities focused on turning city hall into a high-functioning organization across the board, including restoring the levels of services needed for the community, and aspired to add a few major investments to make the city a better place for all.

5. ***Measure O Weaning Schedule (2022):*** The City Council adopted a Measure O Weaning Schedule on June 7, 2022, and updated this schedule on April 25, 2024. There were two stated purposes to weaning. First, in order to ensure the City can cover debt payments due past the sales tax's sunset (for the Fire Station 8 lease), the City needed to build up the fund balance in the few years before the sunset date. Second, at Measure O's termination, all ongoing programs would have to be moved to another funding source, eliminated, or modified, so the weaning effort was intended to make that reabsorption process smoother.
6. ***Recession Protection Fund (RPF) (2025)*:** The City Council created the RPF and allocated $14.9 million one-time available fund balance to provide the necessary buffer that can help the City mitigate the impact of the economic uncertainties generated by the federal economic policies.
7. ***Financial Stewardship (Various Years)****:*
    a. Overcame a $9.2 million structural budget deficit through a variety of measures including reducing the workforce, reducing or eliminating programs, and shutting the Caregine Museum.
    b. Utilized $20 million to pay down long term pension / OPEB (other post employment benefits) debt.
    c. In the City of Oxnard's 2024 Single Audit Report (covering the fiscal year ending June 30, 2024) the City received an unmodified (clean) audit opinion on its compliance with major federal programs
    d. The City has received nine S&P credit rating upgrades in the past four years, and all major funds now hold ratings of A or better, including the City's AA- issuer rating and A+ ratings for Water and Wastewater.
8. ***Adoption of Council's 2026 - 2030 Five-Year Priorities****:* On April 30, 2026, the City Council adopted its Five-Year Priorities, once again utilizing community feedback from the more than 1,900 responses to the City's "Join the Conversation" survey.

DISCUSSION

Oxnard provides a broad range of essential municipal services that residents rely on every day, including police and fire services, 911 emergency medical response, road paving and maintenance, youth and senior programs, park maintenance, homelessness response, infrastructure maintenance and other critical public services. Despite Oxnard voter approval of Measure E in 2020, restoring and sustaining these services continues to be challenging due to the items noted above, coupled with the continued inflation, rising service demands, and increasing infrastructure costs. As outlined in the 2027-2031 Capital Improvement Program, Oxnard faces significant and growing infrastructure needs, including aging streets, sidewalks, public facilities, and other core infrastructure that require substantial investment to rehabilitate, modernize, and maintain at safe and acceptable standards.

On April 30, 2026 and again on May 5, 2026, Mayor Mc Arthur requested a Measure O staff report and options for Measure O, and details regarding some considerations for when it sunsets.

The City publishes an annual Measure O report to the community that provides a high-level summary of how much sales tax revenue has been generated and how the funds are spent. The annual reports are published following Measure O's independent audit as part of the City's Annual Comprehensive Financial Report (ACFR) process.

Some highlights from recent Measure O annual community reports show:

1. Measure O is a local ½ cent sales tax approved by 65% of the voters in 2008.
2. Measure O revenues have ranged from $8.99 million (first full year) to $21.4 million (FY 23-24).
3. Measure O supports police, fire, and emergency response, youth recreation, after school and anti-gang prevention services, upgrading stormwater drains, senior services, increased code compliance, street paving and pothole repair, and other general services.
4. Measure N, as described above, created uncertainty towards Measure O funding until the Ventura County Superior Court ruled that a voter initiative could not legally dictate how an existing general tax should be spent after voters approved it.
5. Council adopted a "weaning off" Measure O schedule, whereby the City reduces Measure O spending towards ongoing expenses each year.
6. The Lease Revenue Bonds lawsuit, described above, impacted the "weaning off" Measure O schedule.
7. The FY 23-24 Community Report showed that Measure O is ending, however, 2/3rds of expiring Measure O funds do not have a dedicated replacement funding source.
8. From Fiscal Year 2022-2023 through FY 2025-26, $36 million in Measure O funds have been budgeted for street resurfacing projects.

A few specific projects and programs to highlight from recent Annual Measure O annual community reports show:

Public Safety

- Supports the Public Safety 911 Computer -Aided Dispatching (CAD) system and Law Enforcement Record Management System (LERMS) - systems critical for processing calls and assisting dispatchers to send first responder resources to where they are needed.
- Funded the advanced life support (ALS) and paramedic program including the staffing, averaging response times under 5 minutes.
- Funded the replacement of end-of life fire engines and 85 handheld radios.
- Funded up to 16 police officers serving in the capacity of the neighborhood policing team (NPT) - officers specialties in neighborhood problem solving and proactive engagement including responding to more than 2500 homeless calls for service annually.

Street Resurfacing & Infrastructure Improvements

- Supports the repairing and reconstructing of deteriorated alleys, neighborhoods and major streets and corridors throughout Oxnard.
- Supports multi-year Capital Improvement Program (CIP) projects, with approximately $36 million budgeted between FY22-23 through FY25-26 for road improvements.
- Supports pothole repair, asphalt purchases, sidewalk grinding, traffic signal repairs.

Parks:

- Funds the majority of the operations and maintenance of College Park and East Village Park.
- Funds support staff to monitor sports at athletic fields.

Homeless Services

- Funded the operation of the Navigation Center, providing shelter and services for the most vulnerable members of our community.

Seniors

- Supports the senior nutrition program, providing daily congregate hot meals at senior centers and home delivery.

Youth

- Continues to fund various youth programs, including the Mobile Activity Center (MAC) summer program, Day at the Park for Special Needs, Oxnard Afterschool ASES program, and other recreational services.
- Supports the City Corp Townkeeping program, which engages youth in neighborhood cleanup and beautification projects.
- Funded wifi access at local libraries and the integrated library system; currently funds the Homework Center at the Main Library.
- Supported Police Activity League (PAL) youth programming, and
- Funded the Pre-School To You program in city parks.

EXISTING NEEDS

The City proactively assesses and manages costs while maintaining a strong commitment to long-term financial planning, fiscal stability, and uninterrupted service delivery to the community. Over time, the City has implemented a variety of efficiency measures, reduction of workforce, reducing or elimination programs, service streamlining, deferred or extended capital improvements, capital expenditures (e.g. vehicles) and maintenance schedules (inclusive of Fire Stations, Fire Engines, Park improvements, alleyway maintenance, etc.), leveraging technological improvements to enhance operational efficiency (multi-year rollout of the enterprise resource planning (ERP) system that modernizes Oxnard's nearly 30-year-old IT infrastructure), and the active pursuit of grant funding and public-private partnerships.

Despite these efforts, the City continues to face significant unfunded infrastructure and facility needs, unfunded state mandates, decreasing Federal and State funding support, and growing community needs resulting in increasingly visible impacts to residents and increased future costs in terms of deferred maintenance. Some of the current impacts include:

Roadways: According to City's "2024 Citywide Pavement Management Program" (dated May 2025) the City currently owns and maintains approximately 440.33 total centerline miles of streets and alleys (approximately 1,036 lane miles of streets) across all functional street classifications, as follows:

- Arterial and Collector – 128.31 centerline miles
- Residential – 246.91 lane miles centerline miles
- Alley – 63.11 centerline miles

This equates to a total of 95,427,081 square feet of pavement in the City's network. As outlined in the most recent Pavement Management Program (PMP) Update, streets with a Pavement Condition Index (PCI) of 71 or above are classified as being in "good" or "excellent" conditions, while streets with a PCI below 50 are classified as being in "poor" or "failed" conditions. Currently the City's overall average PCI is 67, up from 63 a few years ago, but still places the City within an at-risk position for overall network health. Specifically, the alleyways in the City have an overall PCI 40, close to the "failed" category. The PMP Update provides theoretical funding scenarios to maintain or increase the citywide PCI. Just to maintain the current citywide average PCI of 67, the estimated funding amount needed yearly is approximately $18 million. To increase the citywide PCI to 70 over a ten-year period (from 2024-2034) would require close to $22 million in annual funding. These costs are in 2024 numbers and are only escalating due to inflation. These metrics do not

include approximately 445 linear miles of sidewalks of varying age and condition which the City maintains and is required to preserve.

Park amenities: The effect of aging City park amenities has begun to show impact to the community. The restrooms at Johnson Creek Park and Colonia Park have reached the end of their usable lifespan and are in need of replacement but do not have identified funding in the FY 2026/27 CIP budget. In addition to these two parks, restrooms and other park amenities (e.g., playground equipment, sports courts, lighting, etc) at various parks in the City are also aging and, in many cases, approaching the end of useful life. Without significant reinvestment and ongoing maintenance, these amenities could face closures or replacement needs in the future. It is also important to note that some parks (Sports Park and College Park), as well as future elements at Campus Park and Durley Park remain unfunded or unfinished.

General care for amenities: Ongoing maintenance throughout the City continues to improve, however, recent CIP funding requests for existing infrastructure improvements such as the Advanced Alley Maintenance project, the Citywide Sidewalk Repair project, the Bridge Maintenance Citywide project, the Citywide Streetlight Asset Management Program project, and the Main Library Flooring project, to name a few, have not been approved in recent budgets due to the lack of on-going revenue to sustain such efforts. Additional resources could also support increased frequency and expanded scope of weed abatement and sweeping in alleys, landscaping replacements, and trash abatement efforts in parks, medians, sidewalks, and other public areas, as well as bathroom maintenance in parks. These efforts help preserve well-maintained, safe, and welcoming community spaces for residents and visitors.

Capital Improvement Plan (CIP): Currently, the City's FY 2027-31 CIP contains 250 projects (168 existing, 63 new, and 19 reclassified). Of these, there are many non-utility funded projects not currently receiving General Fund or Measure O funding due to the limited resources available, which amounts to approximately $30 million in just FY 26-27. While some of these projects would provide direct, visible benefits for residents to enjoy, others would deliver important behind-the-scenes improvements that support public safety, infrastructure reliability, and long-term community sustainability. Some of those include Police Headquarters parking lot rehabilitation, Fire Station overhead door replacements, and Oxnard Performing Arts Center seismic improvements, among many other City facility infrastructure repairs, rehabilitation, and/or replacements.

Other non-infrastructure challenges: The City must compete in the public sector labor market and keep pace with rising rates for insurance, labor, materials, and energy.

Staff believes the City needs to maintain ongoing local revenue to continue its current service levels, address deferred maintenance, accomplish City Council strategic priorities, and meet the evolving needs of the community. Residents consistently provide feedback that protecting the public's safety, maintaining 911 response times, addressing homelessness and providing youth and senior programs are important to the community. Maintaining Oxnard's locally controlled ½ cent transactions and use tax continues a reliable source of General Fund revenue for City services and infrastructure investments. Revenue generated by the measure would stay local, with all funds used exclusively for Oxnard and protected from being redirected by the State or County. This is especially important given uncertainties with federal and state financial policy and the broader downstream impacts on local services.

COMMUNITY ENGAGEMENT

In recent years, the City has conducted extensive outreach efforts to engage the community regarding service priorities, fiscal challenges, and long-term needs. Through Oxnard's 2019 "Join the Conversation" survey, community members have provided ongoing feedback related to public safety, homelessness, infrastructure, parks maintenance, youth and senior services, and other priorities.

Since relaunching the "Join the Conversation" survey process in 2025, nearly 2,000 residents have participated through ranked survey responses and written comments submitted in both English and Spanish. Community outreach efforts included both online and written responses solicited through attendance at 13 neighborhood council meetings, four city mailers distributed between September 2025 and April 2026, social media support and digital engagement.

Additionally, the City commissioned two community surveys conducted by Fairbank, Maslin, Maullin, Metz & Associates (FM3) Research, which included 600 resident interviews regarding City services, community priorities, and long-term funding considerations. The first survey results were released in April 2025 and published on the City website, which found that Oxnard residents expressed positive attitudes towards City government and the way it provides services. The second survey, completed in May 2026 and published with this report, provides additional insights into resident opinions on city services and continuing existing local revenues for the City of Oxnard.

Together, these extensive outreach efforts demonstrate strong engagement and continued resident interest in maintaining essential local services in Oxnard. The outreach results reflect the community's interest in maintaining Oxnard's long-term financial stability while maintaining local control of its programs and services.

As Measure O approaches its scheduled expiration in 2029, the City Council should consider the long-term impacts that the loss of $20 million in local funds would have on city services. Given the extensive community engagement, staff recommends providing Oxnard voters the opportunity to choose whether the existing ½ cent funding source should continue to maintain current service levels and be used to continue investing in the community priorities that have been identified through the City's outreach efforts.

Therefore, staff recommends that the City Council provide residents the opportunity **to vote** on the "**City of Oxnard Public Safety, Financial Stability Measure (No Tax Rate Increase)"** by placing this measure on the November 3, 2026 ballot.

OXNARD'S BUDGET

Despite the City's now stable General Fund reserves, the City's long-term financial well-being remains challenging. With the impacts of historical state takeaways of local funds, rising costs to maintain basic services, and the expiration of Oxnard's local funding, the City began to plan for this significant loss of revenue impacting all service areas in the near future, including 911 emergency response, protecting the public's safety, maintaining fire protection and crime prevention, programs for youth and seniors, addressing homelessness keeping parks and public areas safe and clean, facility maintenance, and programs for youth and seniors. If this renewal measure is not approved, then City staff will present options to address the loss of approximately $20 million in revenue beginning in 2029.

The City's Measure O ½ cent sales tax is scheduled to end in March 2029. As of the date of writing of this report, the FY 2026-27 Measure O Proposed Budget total expenses are $19.5 million and include a $10.5 million transfer to the Capital Outlay Fund to pay for projects. Of that amount, $8.2 million is identified in the Capital Improvement Program (CIP) page in the City's Proposed Budget. As part of the Council-adopted Measure O Weaning Schedule, the City has intentionally reduced ongoing operational budgets funded by Measure O, and instead directed one-time Measure O funding towards capital improvement projects targeting deferred maintenance.

Given the community survey results and the City's long-term budget forecast, staff recommends the Council adopt a resolution to place a ballot measure on the November ballot related to the renewal of a local transaction

and use tax. If approved by voters, approximately $20M would stay in Oxnard, and could not be taken by the State or the County.

TRANSACTIONS (SALES) AND USE TAX

Based on current projections, if approved by voters, the renewal of the existing ½ cent sales tax is anticipated to continue providing approximately $20 million annually for general governmental purposes. The measure would also continue the accountability provisions of Measure O, including independent audits, public reporting requirements, and citizen oversight to promote transparency and accountability.

If maintained by the voters, Oxnard's overall sales tax rate would remain the same, and be generally comparable to neighboring jurisdictions, including Santa Paula and Port Hueneme. Additionally, Oxnard's sales tax rate remains within the mid-range of rates currently adopted by 483 cities throughout California. As of April 1, 2026, 145 California cities have sales tax rates higher than Oxnard's 9.25% rate, while 29 cities currently share the same rate.

While several Ventura County cities have lower sales tax rates, many of those jurisdictions fund important services through property taxes. For example, Camarillo and Thousand Oaks fund their fire protection services through their property tax allocations. Many parks and recreation services in Camarillo and Thousand Oaks are also funded through property tax assessments that are separate from the city's General Fund. Meanwhile, Oxnard and Ventura are full-service cities that directly operate and fund their police and fire departments, providing greater operational oversight for delivering public safety services. As a result, sales tax rates alone do not reflect how local services are funded in each jurisdiction.

MEASURE OVERVIEW

If the Transactions and Use Tax were to be renewed at the ½ cent rate by the voters of Oxnard, the measure would continue to provide a protected and reliable source of revenue to maintain and prevent cuts to critical resident services and give Oxnard local control over local funds for local needs. Staff recommends the City Council consider placing the renewal measure for maintaining Oxnard public safety, financial stability (no tax rate increase) on the ballot to ask voters the following question:

CITY OF OXNARD PUBLIC SAFETY, FINANCIAL STABILITY MEASURE (NO TAX RATE INCREASE).	
Shall the measure maintaining City of Oxnard's services without raising current tax rates, including protecting public safety, maintaining 911 emergency response/fire protection; repairing streets/potholes; addressing homelessness; maintaining programs for vulnerable seniors; anti-gang/ after-school programs; other general services, by renewing an existing 1/2¢ sales tax, providing $20,000,000 annually until ended by voters, requiring oversight, audits, public spending disclosure, all funds for Oxnard, be adopted?	YES NO

The Council is not, by this action, voting on whether the sales tax should be continued, but rather whether the voters should be given the opportunity to decide whether to continue the existing funding source that supports current City service levels and programs that residents have communicated are important to them. The voters are the only ones who may approve a sales tax measure such as this one. Placing a revenue measure on the

ballot will give the City's voters the opportunity to decide the level of service the City provides. The ballot measure under consideration has the following key components:

- The Transactions and Use Tax Measure would be extended, providing local funding at the existing ½ cent sales tax rate until ended by voters
- All funds generated by the measure would be used to maintain City services with no tax rate increase
- Independent audits of revenues generated would continue to be required
- The Measure would include continued citizens' oversight
- All revenues would be kept local permanently

Voter approval of the measure entitled the "City of Oxnard Public Safety, Financial Stability (No Tax Rate Increase)" would remove Measure O's existing sunset date of February 28, 2029 so that a ½ cent sales tax would continue to generate approximately $20 million annually. Because the existing voter-approved local funding is a tax, the renewal of a ½ cent sales tax can only be adopted by the voters. To be clear, this measure would not add a ½ cent per dollar tax on top of the current Measure O ½ cent per dollar sales tax - it would simply remove the sunset date of February 29, 2029 from the sales tax.

TAX MEASURE PROCESS

The City Council does not have the authority to establish, extend or raise taxes, only to put a measure on the ballot for voter consideration. In other words, City Hall cannot change a sales tax rate, only the voters may do so. In order to place a tax measure on the November 3, 2026 ballot, the City Council must approve the submission of the measure to the voters by a 2/3 vote (at least five affirmative votes) by Resolution. The Resolution also includes the text of the ballot question that will be presented to voters as required by the Elections Code. If approved by the City Council and adopted by a majority of the electorate, the tax would be effective no sooner than the first day of the calendar quarter, commencing more than 110 days after the adoption of the ordinance by the voters.

BALLOT MEASURE ARGUMENTS/REBUTTALS

Pursuant to the California Elections Code, ballot measures may include written arguments and rebuttal arguments submitted in support of or opposition to the measure for inclusion in the voter information guide. The City Attorney is also required to prepare an impartial analysis of the measure.

CITY WEBSITE

Oxnard's "Election Information" webpage (www.oxnard.gov/city-clerks-office/election-information) serves as a centralized resource for local election information, including voter registration resources, information for candidates, election notices, ballot information, and campaign finance disclosure filings. The webpage is updated throughout the election cycle for increased transparency and public access to important election-related information and resources.

STRATEGIC PRIORITIES

This agenda item supports the Organizational Effectiveness strategy. The purpose of the Organizational Effectiveness strategy is to reinforce, stabilize, improve, and strengthen the organizational foundation of the City in order to build a modern, high-functioning City government that effectively and efficiently supports the operating departments in providing high-quality services and programs for our residents and businesses.

FINANCIAL IMPACT

The cost of Council approving the placement of a transactions (sales) and use tax measure on the November 3, 2026 ballot is estimated to be $134,000 plus legal publication costs.

If approved by Oxnard voters, the renewal of a ½ cent sales tax will continue to provide approximately $20 million per year. If not renewed by the voters, in the FY 27-28 budget process, Council will need to consider budget decisions to account for the annual loss of approximately $20 million beginning in March of 2029.

COMMITTEE OUTCOME

This item did not originate in Committee.

RESOLUTION NO. ____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD, CALIFORNIA ORDERING AN ELECTION TO BE HELD ON NOVEMBER 3, 2026 TO CONSIDER THE ADOPTION OF A MEASURE ENTITLED "CITY OF OXNARD PUBLIC SAFETY, FINANCIAL STABILITY MEASURE (NO TAX RATE INCREASE)" AND REQUESTING THE COUNTY CLERK TO CONDUCT THE ELECTION, AND AUTHORIZING THE BOARD OF SUPERVISORS TO CANVASS THE RETURNS

WHEREAS, on November 4, 2008, the People of the City of Oxnard adopted the "City of Oxnard Vital Services Transactions (Sales) and Use Tax Ordinance", commonly referred to as "Measure O"; and

WHEREAS, Measure O has provided funding for core community programs and services within the City; and

WHEREAS, the City of Oxnard is committed to maintaining current programs and services without increasing existing taxes; and

WHEREAS, without this measure, Oxnard would lose approximately $20 million per year for core services including public safety, 911 and fire services, senior support, homelessness programs, and clean and safe public spaces essential to the City's long-term financial stability; and

WHEREAS, State and County funding cuts have jeopardized services that Oxnard's growing senior population depends on for health and wellness programs and hot, nutritious meals; and

WHEREAS, continued local funding will sustain after-school, summer, and gang prevention programs that keep thousands of Oxnard youth safe, supervised, and out of trouble; and

WHEREAS, over 70% of Fire Department calls involve medical emergencies, and cuts to local funding would compromise the firefighters, paramedics, and equipment needed for 911 rapid response to save lives; and

WHEREAS, without this measure, Oxnard would lose millions of dollars which public safety programs rely on, forcing some funding cuts to police and fire departments, which may result in longer 911 response times; and

WHEREAS, this measure will not increase current tax rates, and maintains Measure O's existing requirements that every dollar be used in Oxnard, with full public spending disclosure, independent annual audits, and citizen oversight of all spending; and

WHEREAS, the City Council desires to submit a measure entitled "City of Oxnard Public Safety, Financial Stability Measure (No Tax Rate Increase)" to voters of the City at an election to be held on Tuesday, November 3, 2026, and to be consolidated with any other election to be held on that date; and

WHEREAS, the proposed measure entitled "City of Oxnard Public Safety, Financial Stability Measure (No Tax Rate Increase)" is more completely described in the ordinance attached hereto as Exhibit A and incorporated herein by this reference.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF OXNARD AS FOLLOWS:

Section 1. The City Council hereby finds and determines that the foregoing recitals are true and correct.

Section 2. The City Council hereby proposes the "City of Oxnard Public Safety, Financial Stability Measure (No Tax Rate Increase)", attached hereto as Exhibit A and incorporated herein by this reference.

Section 3. The City Council hereby calls an election on Tuesday, November 3, 2026 (the "Election") and orders, pursuant to Elections Code Section 9222, that the "City of Oxnard Public Safety, Financial Stability Measure (No Tax Rate Increase)" be submitted to the voters at that election.

Section 4. The ballot question shall be substantially as follows:

CITY OF OXNARD PUBLIC SAFETY, FINANCIAL STABILITY MEASURE (NO TAX RATE INCREASE). Shall the measure maintaining City of Oxnard's services without raising current tax rates, including protecting public safety, maintaining 911 emergency response/fire protection; repairing streets/potholes; addressing homelessness; maintaining programs for vulnerable seniors; anti-gang/after-school programs; other general services, by renewing an existing 1/2¢ sales tax, providing $20,000,000 annually until ended by voters, requiring oversight, audits, public spending disclosure, all funds for Oxnard, be adopted?	YES	
	NO	

Section 5. The text of the proposed "City of Oxnard Public Safety, Financial Stability Measure (No Tax Rate Increase)" shall be printed in the ballot materials; a copy of the measure shall be available for public inspection at the City Clerk's office located at 300 West Third Street, 4th Floor in the City of Oxnard. If not provided in the voter guide, upon request, copies will be sent at the expense of the City. A majority of votes cast is required for the measure to pass.

Section 6. This Resolution is adopted pursuant to Elections Code Section 10403 requesting that the Board of Supervisors of Ventura Code, pursuant to Elections Code Section 10401, order that this election of the City of Oxnard be consolidated with the statewide general election to be held on November 3, 2026, which consolidated election shall be held and conducted in the manner prescribed in Elections Code Section 10418.

Section 7. Pursuant to Elections Code Section 10411, the Board of Supervisors is authorized to canvass the returns of the election to be held within the boundaries of the City of Oxnard on November 3, 2026.

Section 8. Pursuant to Elections Code Section 10002, the Board of Supervisors is requested to permit the County Clerk to render the services and supplies shown on Exhibit B, which is attached hereto and made a part hereof, and any and all other services

and supplies necessary to complete the election on November 3, 2026. The City shall pay the reasonable cost of services and supplies rendered by the County Clerk.

Section 9. The City Manager is authorized to execute all documents and to perform all necessary acts to enter into one or more agreements for the provision of election services consistent with this Resolution.

Section 10. The ballots to be used at the election shall be in the form and content as required by laws.

Section 11. The City Council directs the City Clerk to transmit a copy of the measure to the City Attorney and directs the City Attorney to prepare an impartial analysis of the measure pursuant to Elections Code Section 9280 in the manner required by law. Any person or persons may file an argument either for or against the ballot measure. An argument for or against the measure shall not exceed 300 words in length. If more than one argument is submitted for the measure, or more than one argument against the measure, the City Clerk shall select the argument to be included with the ballot materials. Rebuttal arguments shall be permitted pursuant to applicable law.

Section 12. Elections Code Section 9282(b) permits the City Council to authorize members of the City Council to file a written argument for or against any City measure. Pursuant to Elections Code Section 9282(b), the City Council does not authorize any member of the City Council (including the Mayor) to file a written argument for or against the measure described in Section 2 of this Resolution. The City Council and its members (in their official capacities as members of the City Council or Mayor) are not authorized pursuant to Elections Code Section 9282(b) to file a written ballot argument either for or against the proposed measure described in Section 2 of this Resolution in their official capacity. As such, no Councilmember or Mayor shall use his or her title as a Councilmember or Mayor for identification purposes as an author and signor in the signature block of a ballot argument (as described in Elections Code Section 9282) or rebuttal argument (as described in Elections Code Section 9285) relating to the proposed measure described in Section 2 of this Resolution. The provisions of this section shall only apply to the election called in this Resolution for the proposed measure described in Section 2 at the election to be held on November 3, 2026.

Section 13. In all particulars not recited in this Resolution, the election shall be held and conducted in the manner required by law.

Section 14. The City Council shall declare the results of the election called for by this Resolution at its first regular meeting following the certification of the election results.

Section 15. The City Clerk is hereby directed to file a certified copy of this Resolution with the Board of Supervisors and the County Clerk.

Section 16. The City Clerk shall publish a copy of this Resolution in a newspaper of general circulation within fifteen (15) days after the adoption of the Resolution.

Section 17. This Resolution shall be effectively immediately upon adoption.

APPROVED and ADOPTED this 16th day of June, 2026.

ORDINANCE NO. _____

AN UNCODIFIED ORDINANCE OF THE CITY OF OXNARD, CALIFORNIA ADOPTING THE "CITY OF OXNARD PUBLIC SAFETY, FINANCIAL STABILITY MEASURE (NO TAX RATE INCREASE)", WHICH REMOVES THE SUNSET PROVISION OF MEASURE O (CITY OF OXNARD VITAL SERVICES TRANSACTIONS (SALES) AND USE TAX ORDINANCE) SO THAT MEASURE O'S EXISTING, VOTER-APPROVED SALES TAX SHALL CONTINUE UNTIL ENDED BY THE VOTERS, WITH OVERSIGHT, INDEPENDENT AUDITS, PUBLIC SPENDING DISCLOSURE, AND WITH ALL FUNDS FOR OXNARD

WHEREAS, on November 4, 2008, the People of the City of Oxnard adopted the "City of Oxnard Vital Services Transactions (Sales) and Use Tax Ordinance", commonly referred to as "Measure O"; and

WHEREAS, Measure O has provided funding for core community programs and services within the City; and

WHEREAS, the City of Oxnard is committed to maintaining current programs and services without increasing existing taxes; and

WHEREAS, Measure O has an existing sunset date of March 31, 2029; and

WHEREAS, without this measure, Oxnard would lose approximately $20 million per year for core services including public safety, 911 and fire services, senior support, homelessness programs, and clean and safe public spaces essential to the City's long-term financial stability; and

WHEREAS, State and County funding cuts have jeopardized services that Oxnard's growing senior population depends on for health and wellness programs and hot, nutritious meals; and

WHEREAS, continued local funding will sustain after-school, summer, and gang prevention programs that keep thousands of Oxnard youth safe, supervised, and out of trouble; and

WHEREAS, over 70% of Fire Department calls involve medical emergencies, and cuts to local funding would compromise the firefighters, paramedics, and equipment needed for 911 rapid response to save lives; and

WHEREAS, without this measure, Oxnard would lose millions of dollars which public safety programs rely on, forcing some funding cuts to police and fire departments, which may result in longer 911 response times; and

WHEREAS, this measure will not increase current tax rates, and maintains Measure O's existing requirements that every dollar be used in Oxnard, with full public spending disclosure, independent annual audits, and citizen oversight of all spending; and

WHEREAS, the People of the City of Oxnard wish to amend the provisions of Measure O to remove its twenty-year sunset date so that Measure O's existing, voter-approved sales tax will continue until ended by the voters.

NOW, THEREFORE, the People of the City of Oxnard do ordain as follows:

Section 1. TITLE. This Ordinance shall be known as the "City of Oxnard Public Safety, Financial Stability Measure (No Tax Rate Increase)". The City of Oxnard shall be referred to as "City". This Ordinance shall be applicable in the incorporated territory of the City.

Section 2. PURPOSE. This Ordinance is adopted to amend the provisions of the "City of Oxnard Vital Services Transactions (Sales) and Use Tax Ordinance" (Ordinance No. 2779, commonly known as Measure O) to remove its sunset provisions so that Measure O's existing, voter-approved ½¢ sales tax continues until ended by voters.

Section 3. REPEAL OF PART 4 OF ORDINANCE NO. 2779. Part 4 of Ordinance No. 2779 entitled "TWENTY-YEAR SUNSET" is hereby repealed. Except for the repeal of Part 4 of Ordinance No. 2779, all remaining provisions of Ordinance No. 2779 shall remain in full force and effect until ended by the voters.

Section 4. ENJOINING COLLECTION PROHIBITED. No injunction or writ of mandate or other legal or equitable process shall issue in any suit, action, or proceeding in any court against the State or the City, or against any officer of the State or the City, to prevent or enjoin the collection under Ordinance No. 2779 (which this Ordinance amends) or Part 1.6 of Division 2 of the Revenue and Taxation Code, of any tax or any amount of tax required to be collected pursuant to Ordinance No. 2779.

Section 5. SEVERABILITY. If any section, subsection, sentence, clause or phrase of this Ordinance is for any reason held to be invalid, such decision shall not affect the validity of the remaining portions of this Ordinance. The People of the City of Oxnard hereby declare that they would have adopted this Ordinance and each section, subsection, sentence, clause and phrase thereof, irrespective of the fact that any one or more sections, subsections, sentences, clauses or phrases be declared invalid, and intend that the invalid portions should be severed and the balance of the Ordinance enforced.

Section 6. EFFECTIVE DATE. Given that this Ordinance amends Ordinance No. 2779 that relates to the levying and collecting by the City of retail transactions and sale use taxes, this Ordinance is hereby adopted and effective immediately upon approval by the voters of Oxnard.

Section 7. ACTIONS BY CITY CLERK. Upon approval by the voters, the City Clerk shall certify to the passage and adoption of the Ordinance and shall cause it to be published accordingly to law.

This Ordinance was approved and adopted by the People of the City of Oxnard at the November 3, 2026 statewide election.

PASSED and ADOPTED by the voters of the City of Oxnard on November 3, 2026.

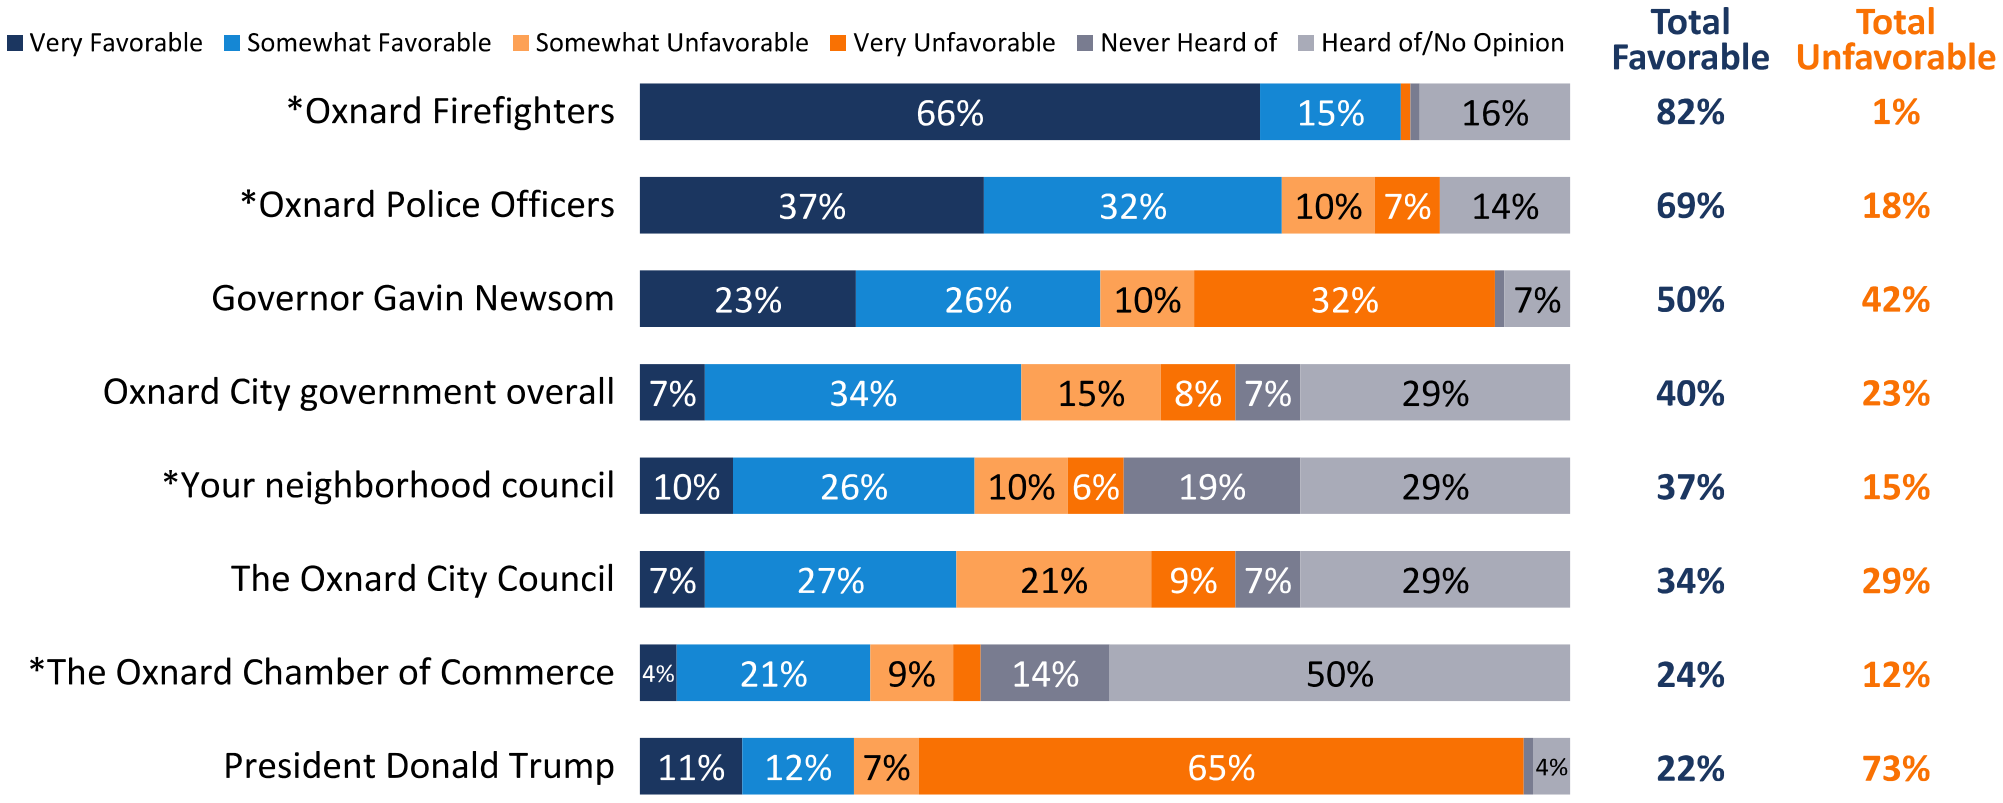
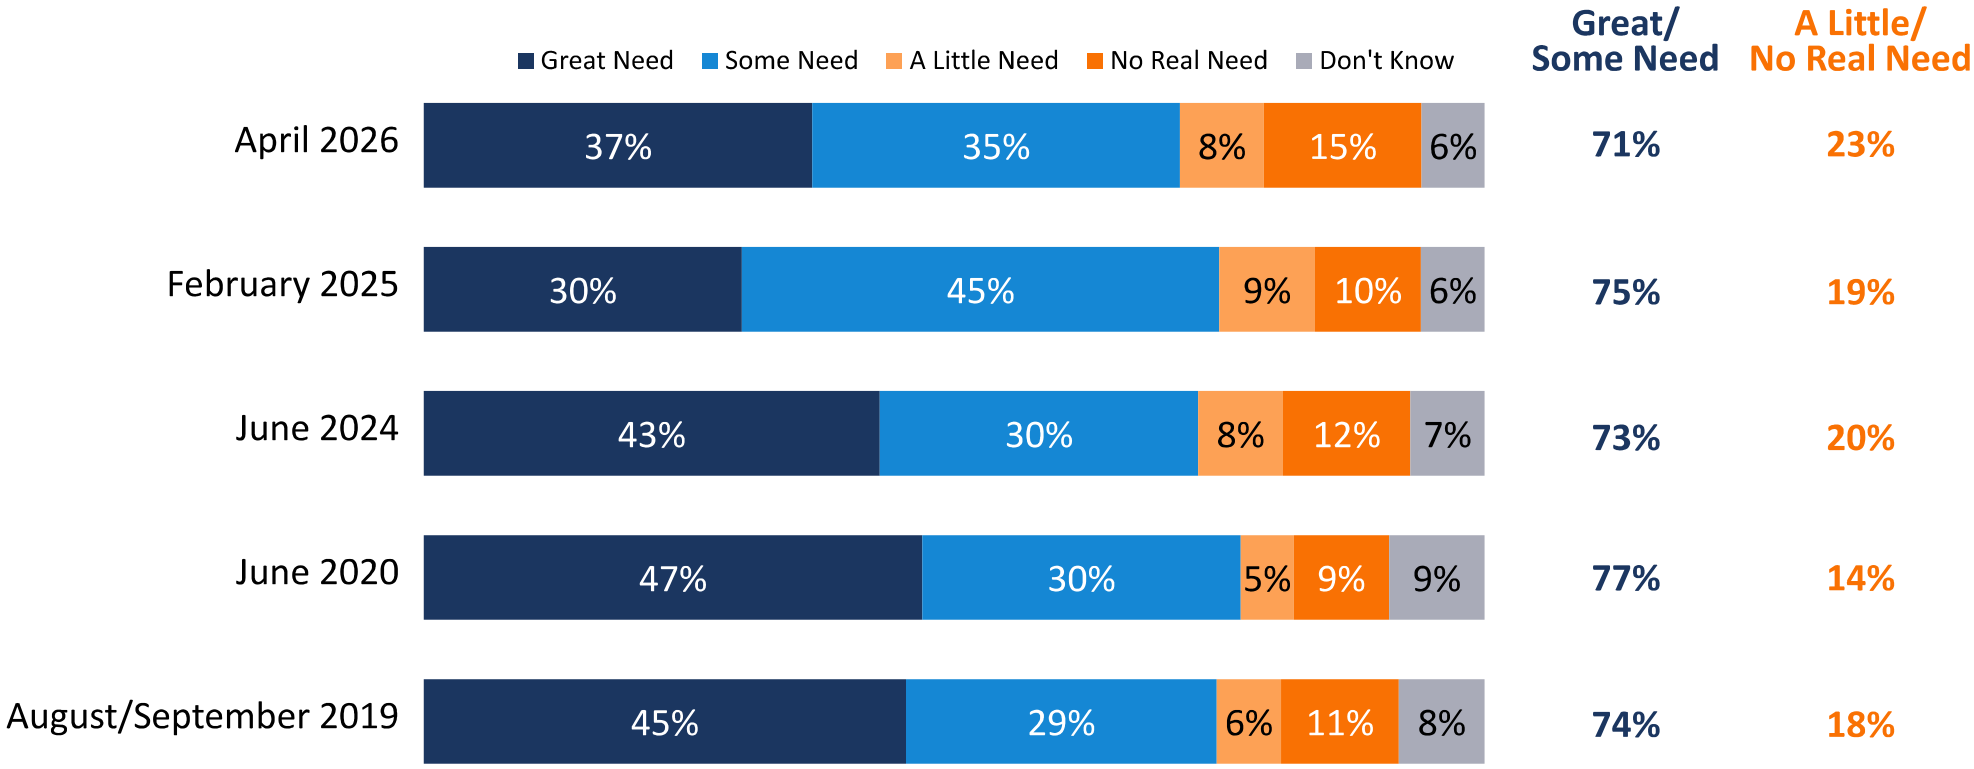
Survey Methodology

Dates	April 21-May 3, 2026
Research Population	Oxnard Residents Likely to Vote in November 2026
Total Interviews	600
Margin of Sampling Error	±4.0% at the 95% Confidence Level
Contact Methods	 Telephone Calls
Data Collection Modes	 Telephone Interviews
Survey Tracking	2007, 2008, 2019, 2020, 2024 and 2025 (likely November 2026 voter data presented)
Languages	English and Spanish



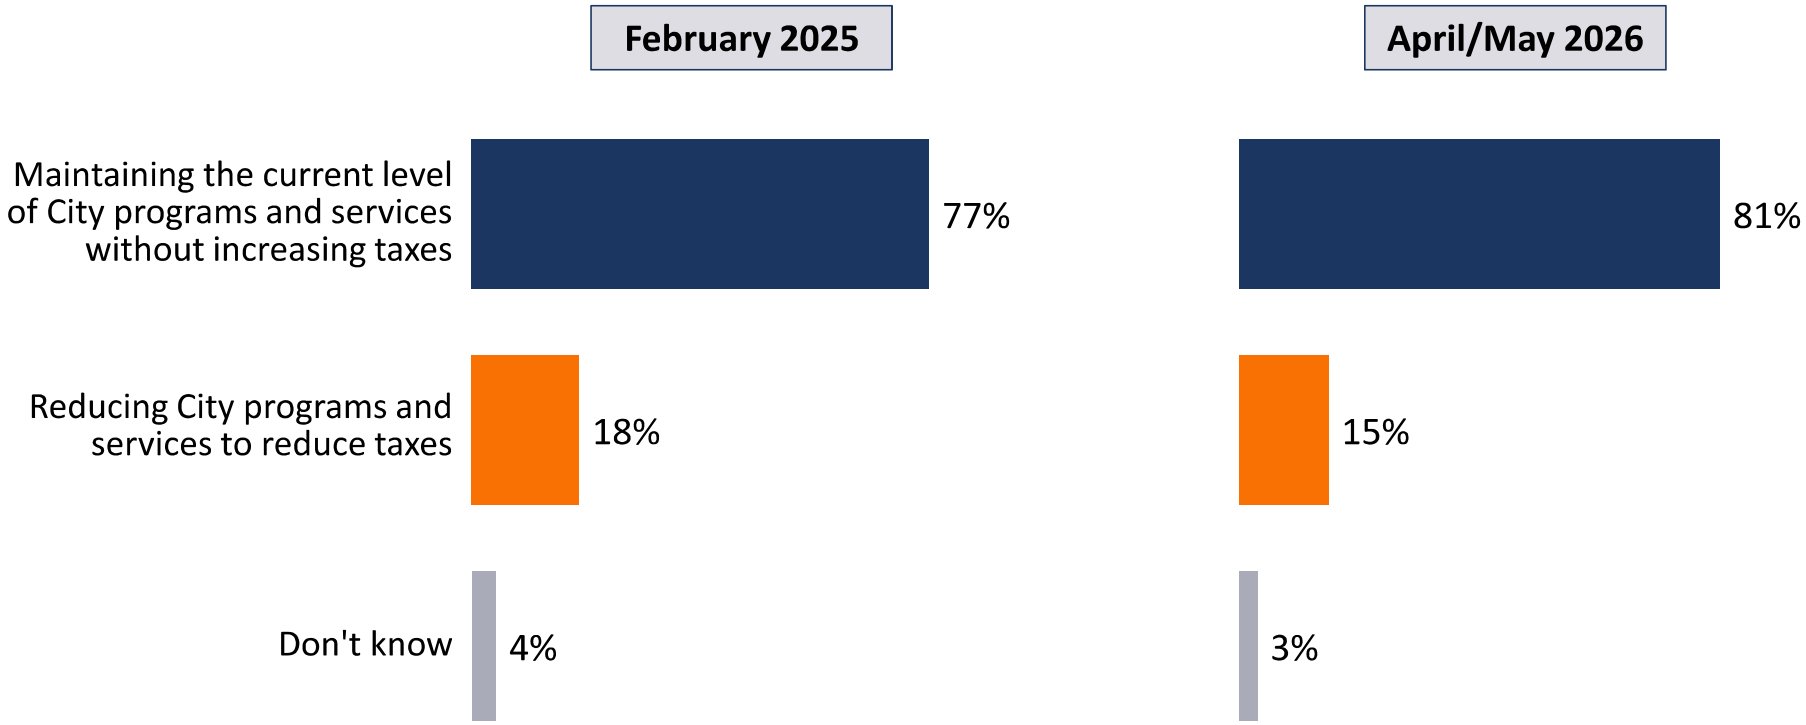
(Note: Not All Results Will Sum to 100% Due to Rounding)

Opinions on the direction of the city have been fairly consistent going back to 2007.



To begin, for each of the following, would you say that things in _____ are generally headed in the right direction, or do you feel that things are off on the wrong track?

Respondents rate City government favorably at nearly a two-to-one rate, with more mixed opinions on the City Council.



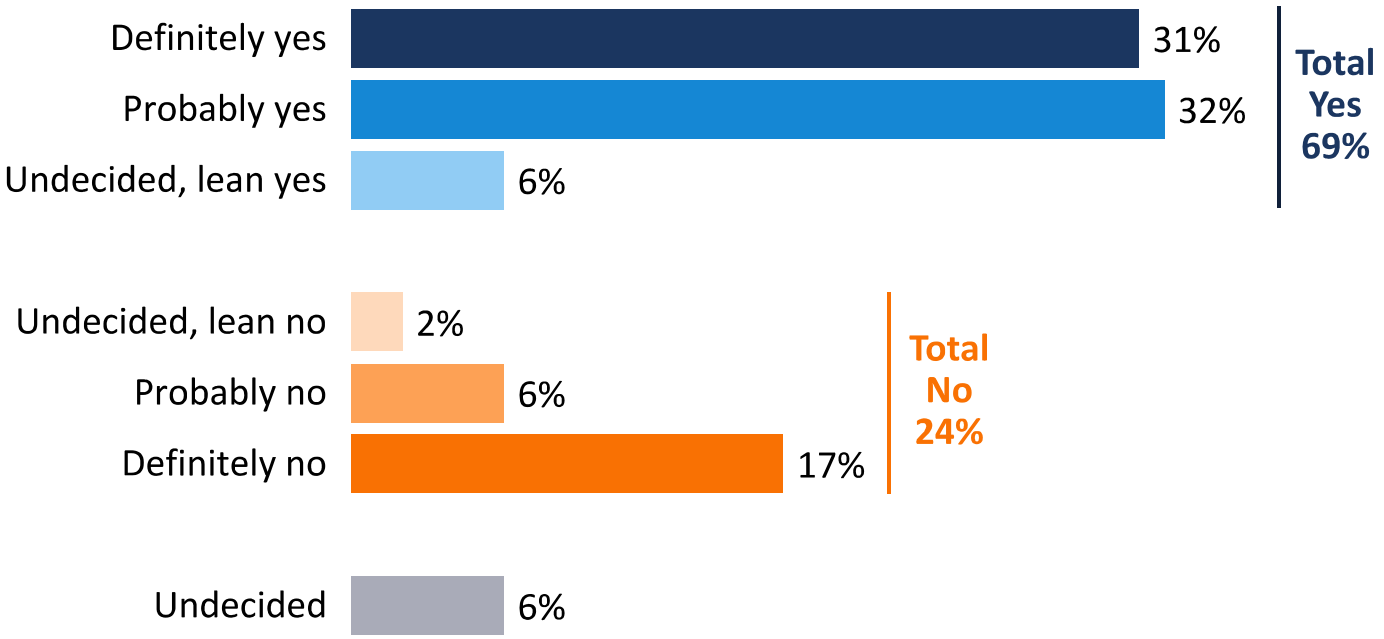
*Next, here are some names of people and organizations active in public life. For each one, please tell me whether you have a favorable or unfavorable opinion of that person or organization. *Split Sample*

Over seven-in-ten continue to think the City needs additional funding for local services.

Next, do you think the City of Oxnard has a great need for additional funding, some need, a little need or no real need for additional funding to provide the level of City services that local residents need and want?

More than 8-in-10 continue to think it is more important to maintain current services than to reduce taxes.

In general, which of the following is more important to you?



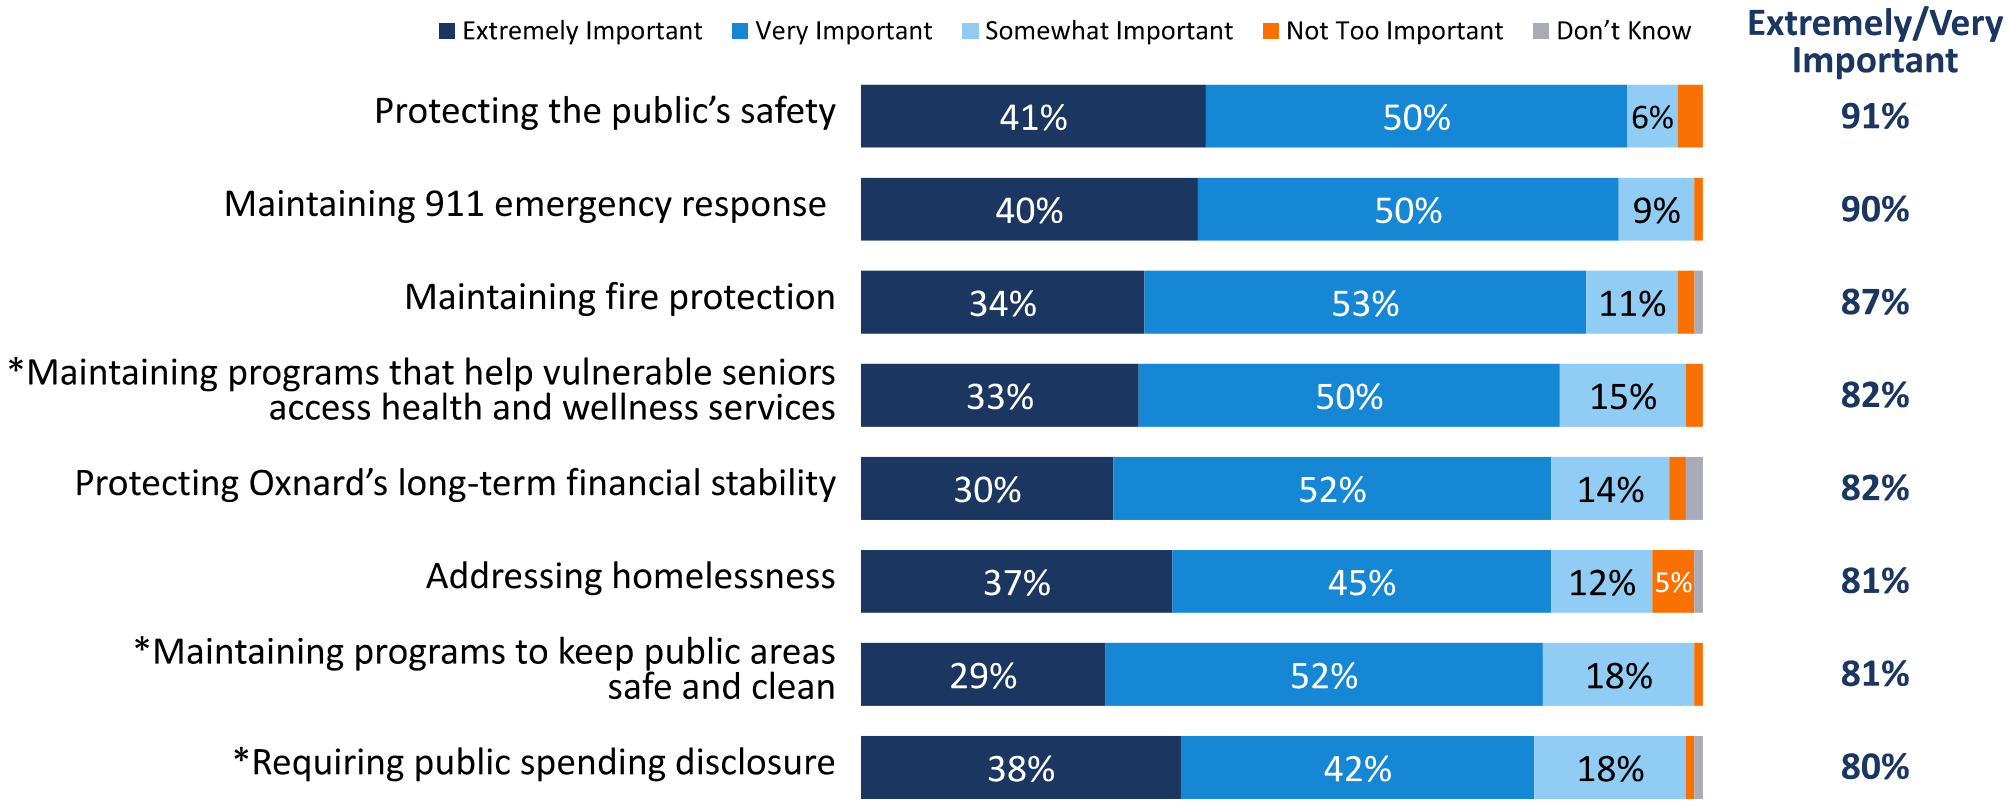
Initial Ballot Measure Opinions

Hypothetical Ballot Question Tested in Survey

(Reviewed by City Attorney)

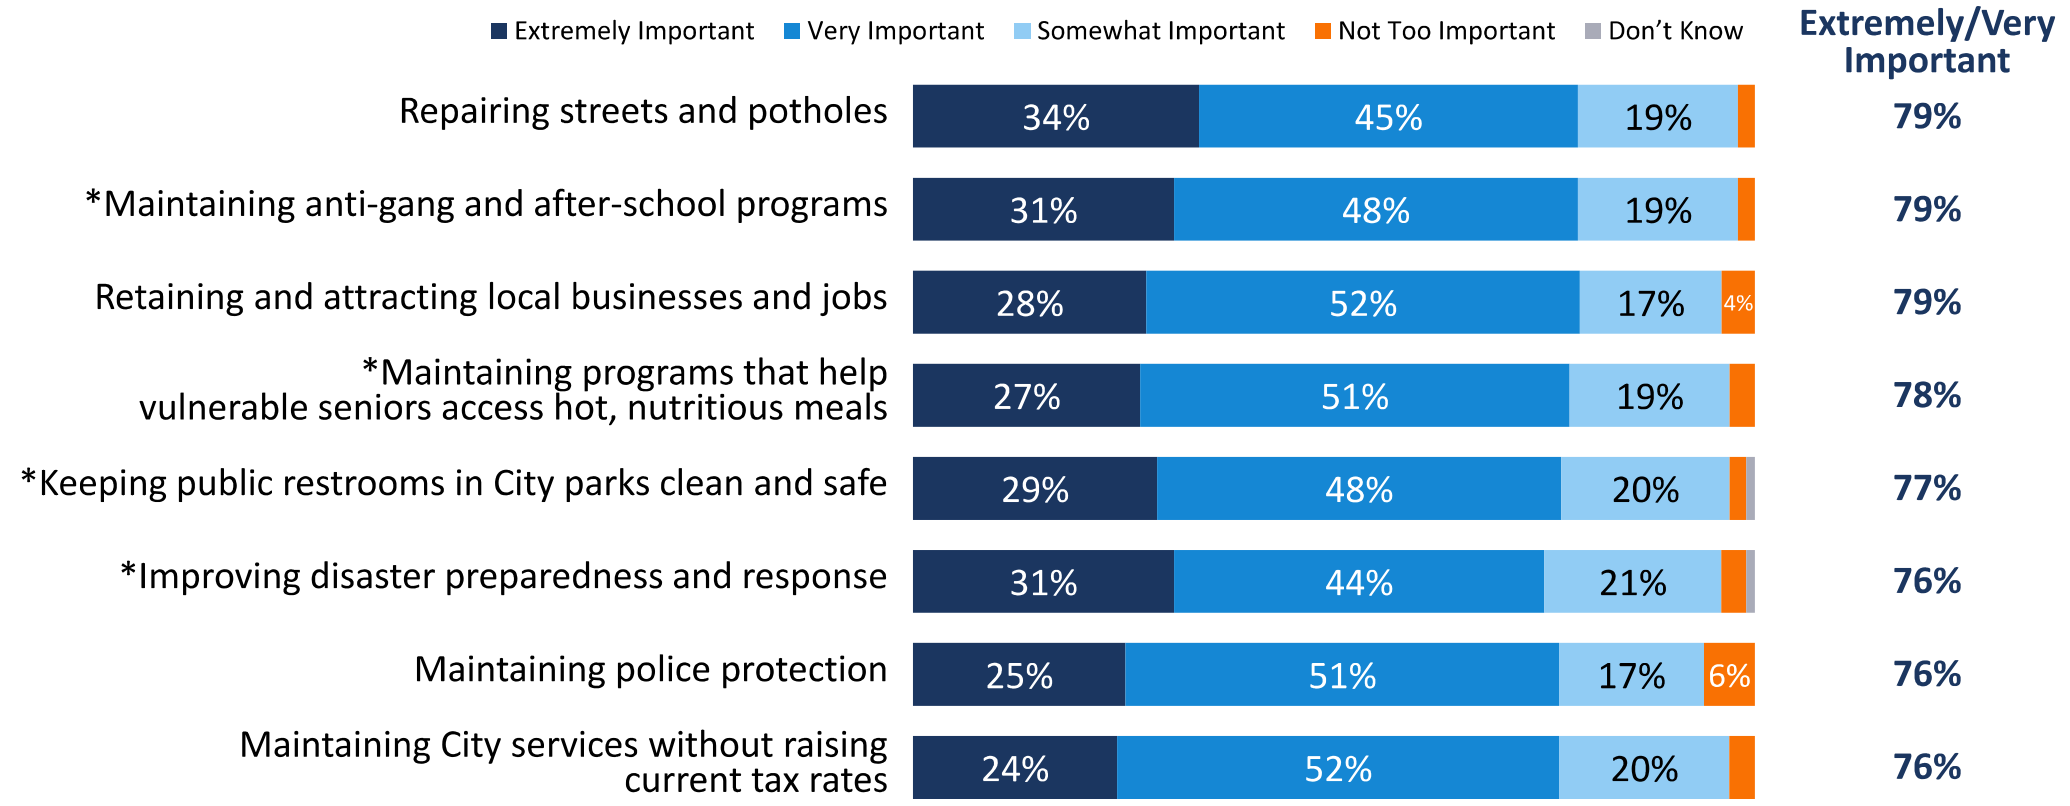
City of Oxnard Local Control/Services Measure (No Tax Rate Increase). To maintain City services without raising current tax rates, including protecting the public's safety, maintaining 911 emergency response/fire protection; repairing streets/potholes; addressing homelessness; maintaining storm drains, parks, anti-gang/after-school, senior programs; other general city services, shall the City of Oxnard's existing, voter-approved ½¢ sales tax be renewed providing $21,000,000 annually until ended by voters, requiring oversight, independent audits, public spending disclosure, all funds for Oxnard?

Nearly 7-in-10 respondents support the measure on the initial vote.



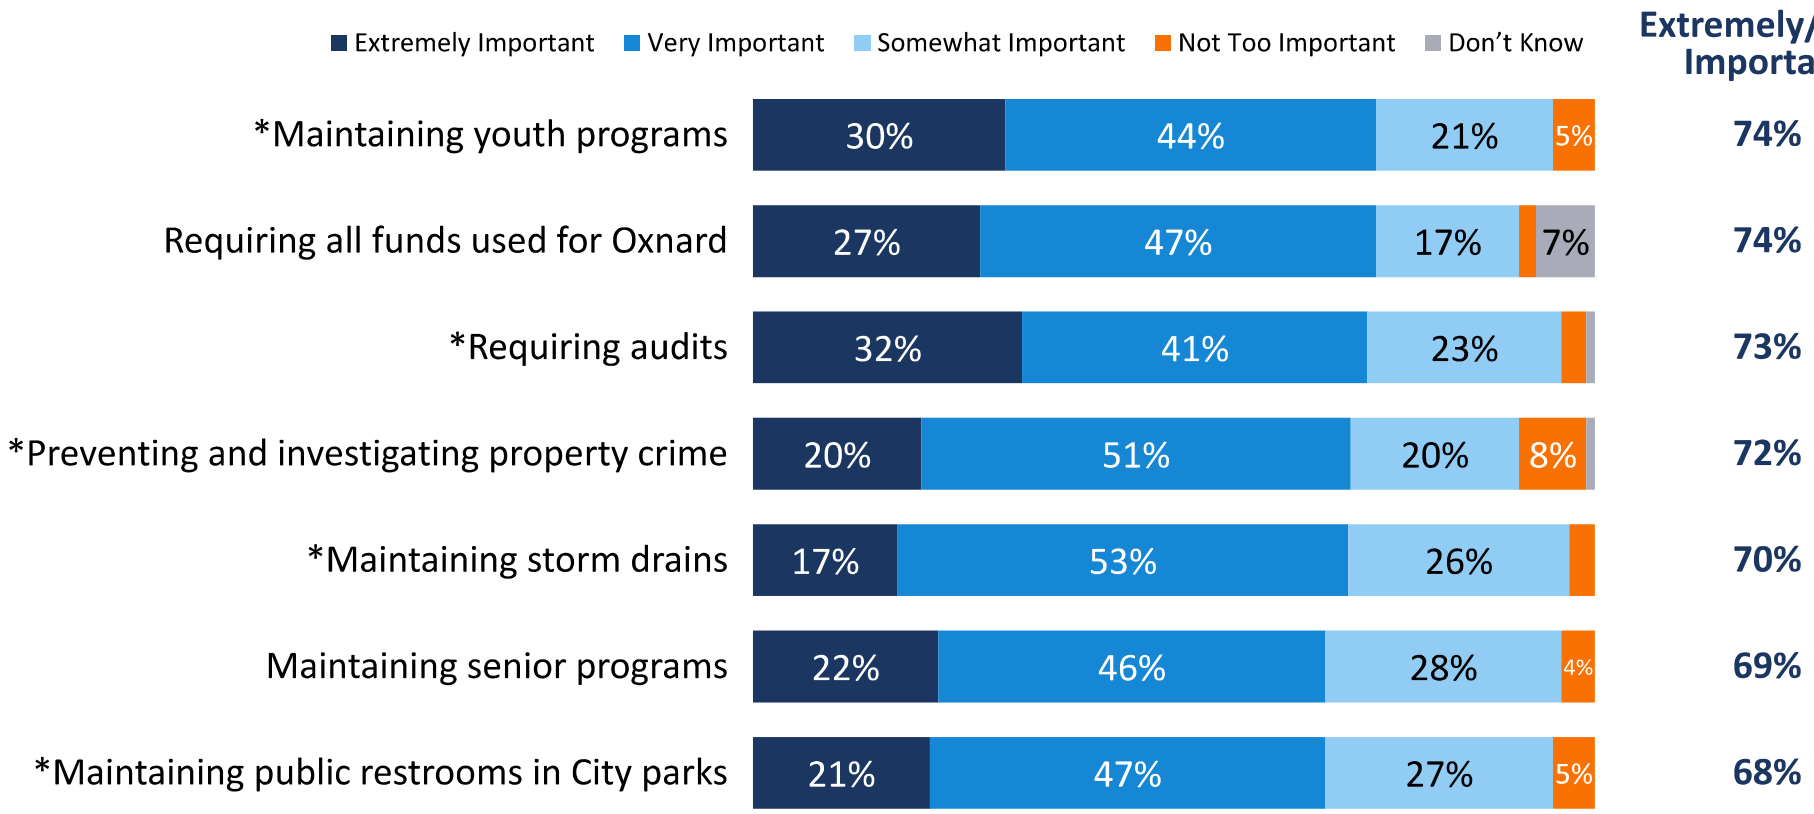
Do you think you would vote yes or no on this measure?

Community Service Priorities



2491

Top priorities include public safety, helping vulnerable seniors, addressing homelessness and fiscal stability.



*Next, please consider the following list of the types of programs and services that could be funded by the ballot measure you considered earlier or provisions that could be included in it. Regardless of how you would vote on the measure overall, please indicate how important each one is to you personally: either extremely important, very important, somewhat important, or not too important. *Split Sample*

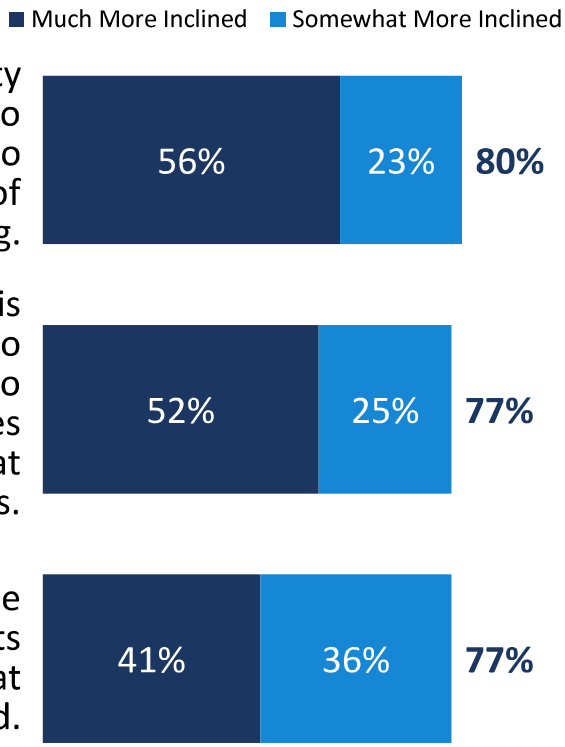
Impact of Information

2496

Statements related to serving youth and seniors and maintaining medical response times resonate strongly.

(YOUTH) This measure is needed to maintain funding for City programs that serve thousands of Oxnard youth after school and in the summer each year, as well as gang prevention programs for at-risk youth. These programs keep our community's kids off the streets, safe, and away from gangs and out of trouble.

(SENIORS) Oxnard's senior population is growing, but the County has had to cut funding to serve them. If this measure is not approved, the City will lose more funding, leaving many vulnerable seniors in our community without access to City services that provide hot, nutritious meals and health and wellness programs.



^**(RESPONSE TIMES – MEDICAL)** In a medical emergency, response time is critical and over 70% of all calls to the City of Oxnard Fire Department are related to medical emergencies. This measure prevents millions of dollars in cuts that would impact the City's medical response times. This measure is needed for Oxnard to have enough firefighters, paramedics, fire stations, engines and lifesaving equipment and communications technology to respond effectively to any medical emergency and save lives.

*Now you will be presented with statements from potential supporters and opponents of the ballot measure titled **City Of Oxnard Local Control/ Services Measure (No Tax Rate Increase)**. First, please consider the following statements from people who may support this potential measure. For each statement, please indicate if it makes you much more inclined or somewhat more inclined to vote yes on this measure.*

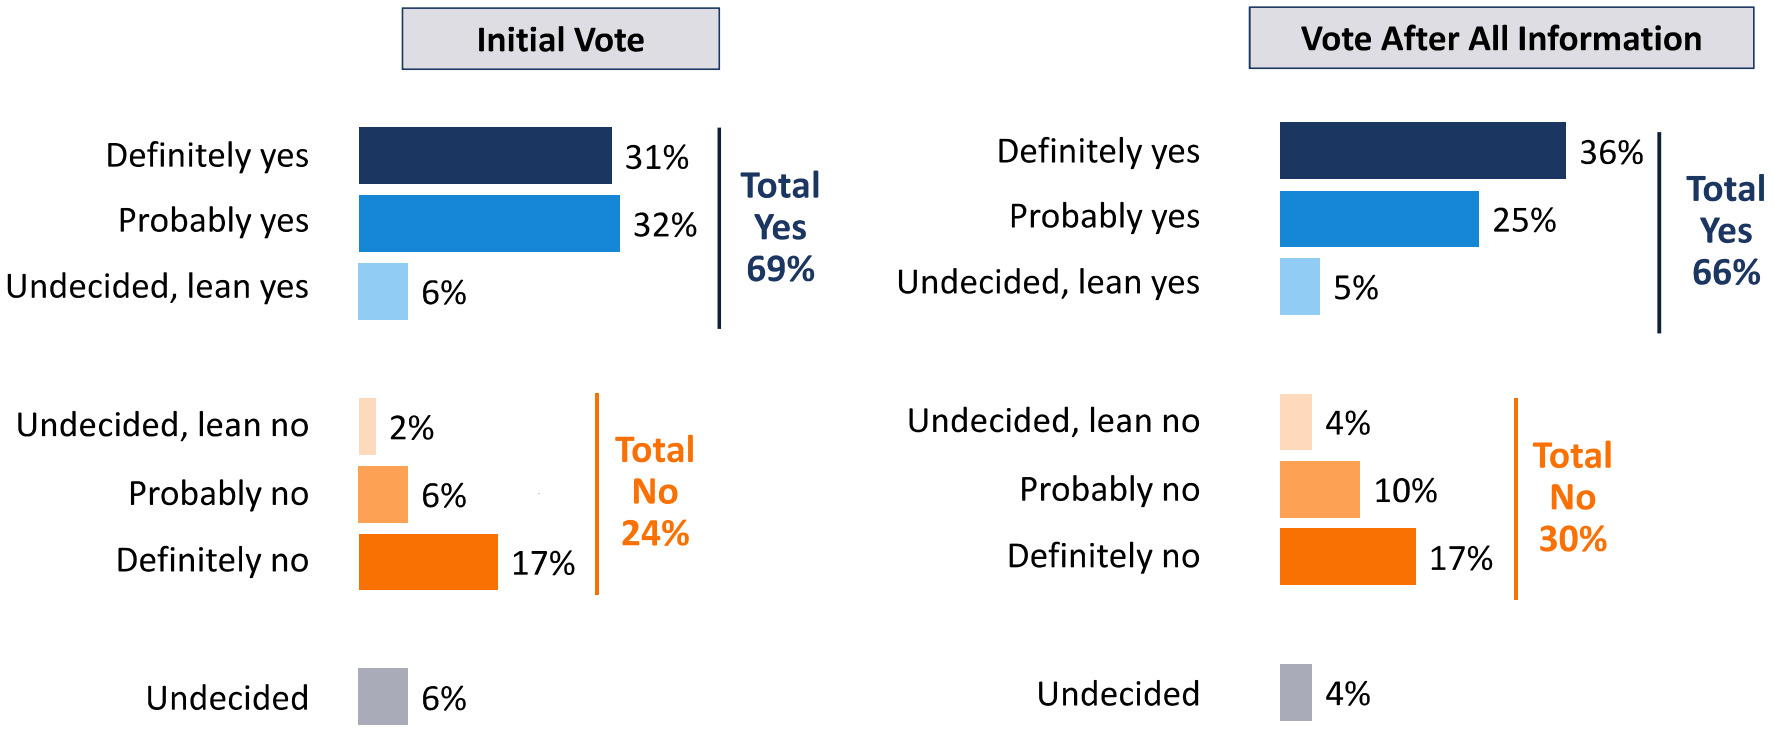
A critical message was also provided.



This measure is really a tax increase in disguise by raising a tax that is going to expire. The City is asking taxpayers to bail them out for their own mismanagement and bad long-term planning. We cannot trust a continuation of this funding with the City Manager and staff still in charge of the uses of funding. They would have enough funding to address the challenges we face if they had simply made better choices and reduced wasteful spending on generous executive salaries and pensions. The City needs to get its own house in order before it comes to taxpayers to take a tax that was going to end and make it permanent.

How can they say they need money to maintain our police and fire departments, when they have over $100 million in reserves and can't find people to fill the jobs that are already funded and are sitting vacant? With the cost of living, including housing and groceries, still out of control, gas prices on the rise and seniors on fixed incomes and many other residents struggling to make ends meet, we should not allow this forever tax on the everyday items we need to buy.

Does this statement make you much more inclined or somewhat more inclined to <u>vote no</u> on this measure? If you do not believe the statement, or if it has no effect on your thinking one way or the other, you can indicate that instead.

Two-thirds continue to favor the measure after information.

Do you think you would vote yes or no on this measure?

Report on Measure O and Consideration of Placi the Renewal of a ½ cent transactions and use (Sales) Tax Measure on the November 3, 2026 Ballot

City Council Meeting
June 16, 2026

Eric Sonstegard, Assistant City Manager

CITY OF OXNARD CALIFORNIA

Recommendation

That the City Council:

1) Receive a report on Measure O;
2) Consider adopting a resolution entitled:

   A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD, CALIFORNIA ORDERING AN ELECTION TO BE HELD ON NOVEMBER 3, 2026 TO CONSIDER THE ADOPTION OF A MEASURE ENTITLED “CITY OF OXNARD PUBLIC SAFETY, FINANCIAL STABILITY MEASURE (NO TAX RATE INCREASE)” AND REQUESTING THE COUNTY CLERK TO CONDUCT THE ELECTION, AND AUTHORIZING THE BOARD OF SUPERVISORS TO CANVASS THE RETURNS

Background

Staff recommends that the City Council place the “City of Oxnard Public Safety, Financial Stability Measure (No Tax Rate Increase)” on the ballot for November 2026 **for Oxnard voters to decide.**

The City Council does not have the authority to establish, extend or raise taxes, only to put a measure on the ballot for voter consideration. In other words, City Hall cannot change a sales tax rate, only the voters may do so.

Background

About Measure O

- Measure O is ½ cent local sales tax approved by 65% of voters in 2008 that provides locally controlled funding for
  - police and fire services,
  - 911 emergency response,
  - street paving and pothole repair,
  - youth and senior programs, and
  - other vital services that our community relies on
- Measure O sunsets in March 2029, unless renewed by voters
- Generates approximately $20 million annually
- Includes citizen oversight committee, annual audits and a report to the community

Background

Measure O Financial Overview

- Measure O revenues have ranged from $8.99M to $21.4M annually
- Approximately $36M budgeted for street resurfacing from FY 22-23 through FY 25-26
- FY 2026-27 proposed Measure O budget includes $19.5M in recommended expenditures
- Loss of Measure O revenue would create approximately $20M annual revenue gap beginning in 2029

Background

Why Council Should Consider Placing Renewal of a ½ cent Transaction and Use Tax Measure on the November 3, 2026 Ballot

- Since 2019, community members have consistently provided feedback on City services and programs that are important to them
- The City has made steady progress on those services and programs, many which are visible to the community
- A renewal of a ½ cent sales tax would maintain this progress without increasing tax rates
- A recent opinion survey found that more than 8-in-10 respondents believe that it is more important to maintain current services than to reduce taxes

Background

Progress Towards Financial Stability

- Created the Measure O Weaning Schedule
- General Fund reserve levels restored from 2.2% during the pandemic recession (2021) to 16.6% (2024)
- Nine S&P credit rating upgrades in four years
- Unmodified audit opinions and strengthened transparency policies
- The City Council just updated its Five-Year Priorities (both in 2021 and 2026) with extensive community input

Discussion

How Maintaining a ½ Cent Sales Tax Supports Community Priorities

As highlighted in recent Measure O Reports to the Community, funds support priorities such as:

- **911 Emergency Response Times**: Maintaining funds help keep Advanced Life Support medical response times and high-priority Police response timesunder five minutes
- **Homeless Services**: Maintaining funding and services of the navigation center, and supporting homeless programs
- **Youth and Senior Programs**: Supports senior nutrition and youth recreation programs, such as the City Corps Townkeeping, which hires local youth for citywide beautification projects that clean our parks and public spaces
- **Long-Term Fiscal Stability & Transparency**: Maintains current services levels while upholding Measure O's oversight, auditing and reporting requirements

Discussion

Sales Tax Comparison

- Oxnard's current sales tax rate is 9.25%. The City's sales tax rate would not change if the ½ cent sales tax measure is renewed

- 145 California cities currently have higher sales tax rates than 9.25%
  - 29 cities share the same sales tax rate as Oxnard

- While most Ventura County cities have lower sales tax rates, many of those jurisdictions fund important services through property taxes (e.g. through property taxes for a fire protection district or parks district)

Discussion

Proposed Ballot Measure

If the Transactions and Use Tax were to be renewed at the ½ cent rate by the voters of Oxnard, the measure would continue to provide a protected and reliable source of revenue to maintain and prevent cuts to critical resident services and give Oxnard local control over local funds for local needs. Staff recommends the City Council consider placing the renewal measure for maintaining Oxnard public safety, financial stability (no tax rate increase) on the ballot to ask voters the following question:

CITY OF OXNARD PUBLIC SAFETY, FINANCIAL STABILITY MEASURE (NO TAX RATE INCREASE).	
Shall the measure maintaining City of Oxnard's services without raising current tax rates, including protecting public safety, maintaining 911 emergency response/fire protection; repairing streets/potholes; addressing homelessness; maintaining programs for vulnerable seniors; anti-gang/ after-school programs; other general services, by renewing an existing 1/2¢ sales tax, providing $20,000,000 annually until ended by voters, requiring oversight, audits, public spending disclosure, all funds for Oxnard, be adopted?	YES
	NO

Discussion

Proposed Ballot Measure

The ballot measure under consideration has the following key components:

- The Transactions and Use Tax Measure would be extended, providing local funding at the existing ½ cent sales tax rate until ended by voters
- All funds generated by the measure would be used to maintain City services with no tax rate increase
- Independent audits of revenues generated would continue to be required
- The Measure would include continued citizens' oversight
- All revenues would be kept local which neither the County nor the State can take away

Discussion

Council Consideration

- Requires 2/3 City Council approval to place the measure on the ballot
- Council is NOT approving a tax
- Council is considering whether voters should be given the opportunity to decide if continuing the ½ cent sales tax is the right thing for the community
- Measure would appear on the November 3, 2026 ballot
- Voters ultimately determine renewal of the existing ½ cent tax of Measure O

Recommendation

That the City Council:

1) Receive a report on Measure O;
2) Consider adopting a resolution entitled:

   A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD, CALIFORNIA ORDERING AN ELECTION TO BE HELD ON NOVEMBER 3, 2026 TO CONSIDER THE ADOPTION OF A MEASURE ENTITLED “CITY OF OXNARD PUBLIC SAFETY, FINANCIAL STABILITY MEASURE (NO TAX RATE INCREASE)” AND REQUESTING THE COUNTY CLERK TO CONDUCT THE ELECTION, AND AUTHORIZING THE BOARD OF SUPERVISORS TO CANVASS THE RETURNS
